GEOCHEMICAL ANALYSIS OF CONDENSATE SAMPLES
FROM 15/5-1 AND 15/5-2 WELLS
(NORWAY)

P. CAILLEAU

Boussens - September 1980

DISPATCHING LIST

RECIPIENTS :

- DIVISION PROGRAMME PARIS à l'intention de l'Expert Régional EXPLO. EUROPE	1
- EXPLO. DIG EUROPE	2
- ELF NORGE s/c. EXPLO. DIG EUROPE	12
- D.R.A. BOUSSENS	1
- S.I.D. BOUSSENS	2

One condensate sample from 15/5-1 (test 3553-3616 m) and one from 15/5-2 (test 4140-4160 m) were analysed ; the gross composition of these products and some calculated indices are given in table 1 and their chromatograms (thermo-vaporized, saturated and aromatic fractions) are given on plates 1 and 2.

These two fluids have been compared with each other and also with the organic extracts previously analysed*.

1 - The main genetical characteristics, given by the chromatograms of the saturated and aromatic (thiophenic) fractions, show the different origins of the two condensates. These origins are clearly defined by the A/B = (Pristane/nC₁₇)/(Phytane/nC₁₈) ratios :

15/5-1 (A/B = 1.05) Upper Jurassic
15/5-2 (A/B = 3.25) Dogger - Lias.

2 - The catagenetical characteristics are given by X₁ and X₂ ratios, Pristane/nC₁₇ and Phytane/nC₁₈ ratios. They show that the condensates have been generated :

- 15/5-1 by a low maturity source-rock (first part of the main oil generation zone) ;
- 15/5-2 by a mature source-rock (end of main oil generation zone).

Taking into account the catagenetic levels defined in the two well reports, both condensates have been generated not far from their reservoirs.

For the first time in block 15, we have to note the presence of benzothiophene in thiophenic compounds in the 15/5-1 condensate : this is probably due to a maturation of the upper Jurassic source-rock lower than in the other wells analysed in this block.

In brief

- . 15/5-1 Condensate = upper Jurassic source-rock (as for the 15/3 fluids, but with a low maturity),
- . 15/5-2 Condensate = mature Dogger - Lias source-rock.

* cf. reports GEO/LAB Bss :

- n° 9/1809 (15/5-1)
- n° 9/1843 (15/5-2).

Table 1

15/5-1 and 15/5-2 condensates
