Dear Mr. Caan,

Action: NSG-1024 dd
19.7.67.

Request for Crude Oil Analysis
(6244/6231)

With reference to your letter dated 6th July to Dr. Tomlinson and our subsequent telephone conversations, I am sending herewith the results of our preliminary inspection of the two samples of crude oil. We have also suggested some possibilities for future work.

If you feel that we can be of further assistance to you, please let me know.

Yours sincerely,

C. F. McCue

Analyses of Crude Oils NSG-0-1 and NSG-0-2

N.B. The samples were leaking on receipt and it is likely that some light ends may have been lost.

I. Details of analyses performed on the crudes "as received"

| | 5758 ft | 5829 ft |
|--------------------------------|-------------------------|--|
| | O-1 | O-2 |
| 1. <u>gravity</u> | { S.G. 60°/60° °API | .9202 22.3 |
| 2. <u>pour point</u> | | +15°F |
| 3. <u>viscosity</u> | { SUS 60°F SUS 100°F | Unreliable due to wax separation. 625 |
| 4. <u>water and sediment</u> | ASTM D-96 | 8.4 vol% |
| 5. <u>total sulphur (bomb)</u> | ASTM D-129-58 | 0.64 wt% |
| 6. <u>vanadium</u> | X-ray fluorescence | 10 ppm |
| 7. <u>nickel</u> | " " | <10 ppm |
| 8. <u>distillation</u> | | |

(a) 250 mls. distilled to 430°F by method similar to ASTM D-86,
then to 800°F by method similar to ASTM D-1160 (approximates to
a "1-plate" distillation).

| volumes % off | at (°F) | |

| residue | 40.6 | .9860 | 12.0 | 41.2 | .9914 | 11.0 |

9. gas chromatography

The two crudes were analysed for carbon number distribution using a 6' packed column with silicone gum as stationary phase. The results, as wet weight percent on the total crude, are given below:-

| carbon number | 0-1 | 0-2 |
|---------------|-----|---|
| < 8 | 2.9 | 2.2 |
| 8 | 2.5 | 2.0 |
| 9 | 1.7 | 1.3 |
| 10 | 2.0 | 1.6 |
| 11 | 2.1 | 1.6 |
| 12 | 2.5 | 1.9 |
| 13 | 2.8 | 2.2 |
| 14 | 3.3 | 2.6 |
| 15 | 4.0 | 2.7 |
| 16 | 3.6 | 2.7 |
| 17 | 3.2 | 2.7 |
| 18 | 3.2 | 2.4 |
| 19 | 2.8 | 1.9 |
| 20 | 3.0 | 1.9 |
| 21 | 2.7 | 1.7 |
| 22 | 2.6 | 1.7 |
| 23 | 2.3 | extra work required for breakdown in this range on sample 0-2 |
| 24 | 2.0 | |
| 25 | 2.0 | |
| 26 | 1.6 | |
| 27 | 1.7 | |
| 28 | 1.6 | |

* The sulphur content of this fraction was below the detection limit, 0.1 microg ml⁻¹.

II. Details of analyses performed on water-free crude or fractions

10. Metals by X-ray fluorescence

| element | content, by weight (ppm) | |
|-----------|--------------------------|------|
| | 0-1 | 0-2 |
| iron | < 5 | < 5 |
| manganese | < 5 | < 5 |
| cobalt | < 5 | < 5 |
| zinc | 5-10 | 5-10 |
| barium | < 5 | < 5 |
| lead | 5-10 | 5-10 |
| potassium | < 5 | < 5 |
| strontium | 5 | 5 |
| calcium | 115 | 215 |

11. Hydrocarbons in light ends, by gas chromatography

The < 150°F fraction of crude 0-2 was analysed by g.c. with the following results:-

| Component | wt.% |
|-------------|---------|
| methane | 1.4 |
| ethane | 14.8 |
| propane | 24.8 |
| iso-butane | 11.4 |
| n-butane | 0.5 |
| iso-pentane | 11.6 |
| n-pentane | 4.6 |
| hexanes) | balance |
| heptanes) | |

III. Details of analysis performed on water separated from crudes

12. Ionic composition and pH

| ion | content, ppm by wet wt. | |
|--------------------|-------------------------|------|
| | 0-1 | 0-2 |
| Cl ⁻ | 10 | 7.5 |
| Na ⁺ | 6.1 | 3.7 |
| K ⁺ | 0.7 | 0.3 |
| Mg ²⁺ | <0.1 | <0.1 |
| Ca ²⁺ | 1 | 0.5 |
| Fe ^{2/3+} | <1 | < |
| pH | 7 | 7 |

IV. Possible Future Work

The fractions from distillation 8(b) have been retained. Among the tests which could be performed are:-

- S content
- hydrocarbon type analysis (P,N,A)
- physical constants

Esso 25/11-1

Dear Sir:

Abingdon analyses in 62-44 (1967)
Place in well file

Enclosed are copies of the results of crude oil assays of two samples from the Esso Norway 25/11-1 well that were analyzed by Humble's Refinery Laboratory at Baytown, Texas. We just received these results and are sending them to you for your possible use prior to our later more complete report on these samples. We had already submitted these samples to the Baytown Laboratory before we received your letter NSG-1024 of July 19, 1967, which included the results of similar analyses performed by the Esso Research Center in Abingdon.

The samples are identified in the Baytown reports according to our sample numbering system as follows.

54051A - FIT 5,758 feet
 54051B - FIT 5,829 feet

We are proceeding with other geochemical analyses of these oils in our own laboratories and expect to report the complete results shortly. We will not do any of the trace metal analyses mentioned in your letter NSG-1022 dated July 17, 1967, since similar studies were done for you at the Abingdon laboratory.

Yours truly,

E. McFarlan, Jr.
