---	---	--	--	-------------------------

This report comprises the results of the screening analysis of well 7228/9-1.  
All analyses have been carried out at Norsk Hydro Research Center in Bergen.

The results of the RockEval/TOC analyses are given in Table 1. and the results are plotted versus depth in Figure 1.

Wet drill cuttings were washed in luke warm running water on a 0.25 mm sieve. The resulting samples were dried overnight at 50° C.

All RockEval/TOC analyses have been carried out on finely crushed, bulk 1-2 mm fraction. Some of the samples appeared to contain a dark, metallic grease after washing. This gave rise to elevated  $S_1$  values at 2385 m.

**TABLE 1: Results from RockEval/TOC.**
