

6.1

Drilling fluid well summary

36" and 24" section was drilled riserless, utilizing seawater as drilling fluid. High viscous pills was pumped as sequenced to ensure good hole cleaning. The 36" and 24" hole was displaced to 1.20 sg viscous mud prior to running casing.

The 17 1/2" section was drilled utilizing KCL/polymer mud as drilling fluid. The mud performed as expected and no significant problem was observed during the drilling operation. KCL level was maintained in the 100 - 110 kg/m³ range, and the rheology was controlled with PV values in the 21 - 28 cp range, and YP values in the 8 - 11 pascal range.

Initial mud weight was 1.20 sg, and was raised to a maximum of 1.41 sg at T.D of the section.

The mud used in the 17 1/2" section was also used in the 8 1/2" section. The mud weight was reduced to 1.25 sg and kept constant throughout the whole section. YP was reduced to the 6 - 8 Pascal range. The KCL level was gradually decreased to 70 kg/m³. The cuttings appeared slightly sticky at this KCL concentration.

Deminex (Norway)	2 copies
Norske Agip A/S	2 copies
NPD	2 copies

Date : 14.10.92

Appendix 1: TABLES

1. Lithology Description
2. Rock-Eval Table (bulk and solvent extracted samples)
- 3a-b Iatroscan (EOM)
4. Pyrolysis Gas Chromatography Composition
- 5a-d Solvent Extraction Data
6. Saturated Hydrocarbon Ratios
7. Aromatic Hydrocarbon Ratios
- 8a-b Carbon Isotope Data for C₁₅₊ Fractions
- 9a-d Gas Chromatography - Mass Spectrometry Data

**Appendix 2: GHM - THERMAL EXTRACTION GAS CHROMATOGRAMS AND
GHM - PYROLYSIS GAS CHROMATOGRAPHY PYROGRAMS****Appendix 3: GAS CHROMATOGRAMS**

- I. Iatroscan Chromatograms (TLC/FID)
- II. Saturated Fraction Chromatograms (FID)
- III. Aromatic Fraction Chromatograms (FID/FPD)

**Appendix 4: GAS CHROMATOGRAPHY - MASS SPECTROMETRY,
FRAGMENTOGRAMS**

SUMMARY

A total of 79 samples was analysed for source rock potential and occurrence of migrated hydrocarbons for the well NOCS 6407/10-3. A screening analysis program (lithology description, Rock-Eval pyrolysis, total organic carbon and Iatroscan TLC/FID). Samples for detailed geochemical analyses were selected mainly from side wall core samples and to a minor extent from cuttings. The follow-up analytical program included thermal extraction gas chromatography, pyrolysis - gas chromatography, solvent extraction, gas chromatography of the hydrocarbon fractions, isotope analysis and biomarker analysis (saturates).

Chapter 1

INTRODUCTION

1.1 General Comments

The well NOCS 6407/10-3 was studied for organic geochemistry on behalf of the operator Norsk Hydro with emphasis on evaluation of the source rocks (type and maturity) and the presence of migrated hydrocarbons.

The well is located at the position 07°18'10.40" Eastern longitude and 64°06'11.60" Northern latitude. The well was drilled down to the basement with a total depth of 2973 m. A total of 79 samples (28 cuttings, 42 side wall cores, 9 core chips) was received by Geolab Nor for geochemical analyses. All samples were subjected for screening analyses and subsequently follow-up analyses were carried out mainly on side wall cores and to a less extent on cuttings and core chips.

The report is presented, chapter and section-wise, in a chronological order of analyses, starting with the screening analyses. Each section discusses the results, where ever possible, in a stratigraphic context (top to bottom).

1.2 Analytical Program

In accordance with the contract the following planned analytical program was carried out, based on pre-selected side wall core samples, cuttings and core chip samples by Norsk Hydro. The samples used for the geochemical analyses covered the interval from 1530 m to 2952 m:

<u>Analysis type</u>	<u>No of samples</u>	<u>Figures</u>	<u>Tables</u>
Lithology description	79	2	1
Rock-Eval pyrolysis	79	3,4,5	2
Rock-Eval pyrolysis, solvent extracted	9		2
Iatroscan (EOM)	14		3
Thermal extraction GC (GHM, S1)	11	6a-c	
Pyrolysis GC (GHM, S2)	9	7a-b,8	4
Soxhlet Extraction of organic matter	18		
MPLC separation	18		5
Saturated hydrocarbon GC	18	9	6
Aromatic hydrocarbon GC	5		7
Isotope composition C ₁₅₊ fractions	18	10,11	8a-b
GC-MS of saturated HC	18	12a-i	9a-d

All the samples were supplied by Norsk Hydro. The stratigraphy was also supplied by the client and this report is based on the formation tops contained therein.
