## ANALYTICAL PROGRAM

The samples are prepared by either the Geochem Group, Chester, or by Hydro Research Centre, Bergen. All samples are analysed by GC/MS at Hydro Research Centre, Bergen. The analysed samples and analytical quality are listed below. The samples which are labeled 'BIOM..' represent the internal lab reference sample. This sample is included in all analytical series and reflects the analytical repeatability. The results are classified as OK, WEAK (but acceptable) or ND (Not Detectable)

Sample	Type	Workup	MSD_SAT	MSD_ARO	MRM1

## EXPERIMENTAL: GC/MS saturated biomarkers

Analytical method:	<p><b>MSD_S_C</b> version June 1993          (Mass Spectrometric Detection Saturated-biomarkers version C)</p>
	<p>Gas chromatographic and linked quadropole Mass Spectrometric (MS) analysis of Saturated biomarkers. And a parallel Flame Ionization Detection (FID) of saturated compounds.</p>
Detected compounds:	<p>Detected pre-selected groups of saturated (SAT)-biomarkers in the saturated group type fraction are listed on the next page.</p> <p>The MS-detected SAT-biomarkers are presented in mass chromatograms (fragmentograms) and normalised to the most abundant compound. Processed peak height data and standard peak ratios are reported.</p> <p>This semi-quantitative presentation is strictly related to the analytical method. The concentration/response ratio is not necessarily comparable between different type of compounds.</p> <p>The quantitative comparison based on the presented biomarker distributions are restricted.</p>
Method description:	<p>The samples are analysed according to the standard lab procedures for SAT-biomarker MS-detection.</p> <p>The analytical conditions are indicated on the following pages.</p> <p>The MS-detection is based on low resolution selected ion recording of a standard selection of common fragment ions. The mass window is approximately 1 mass units.</p>

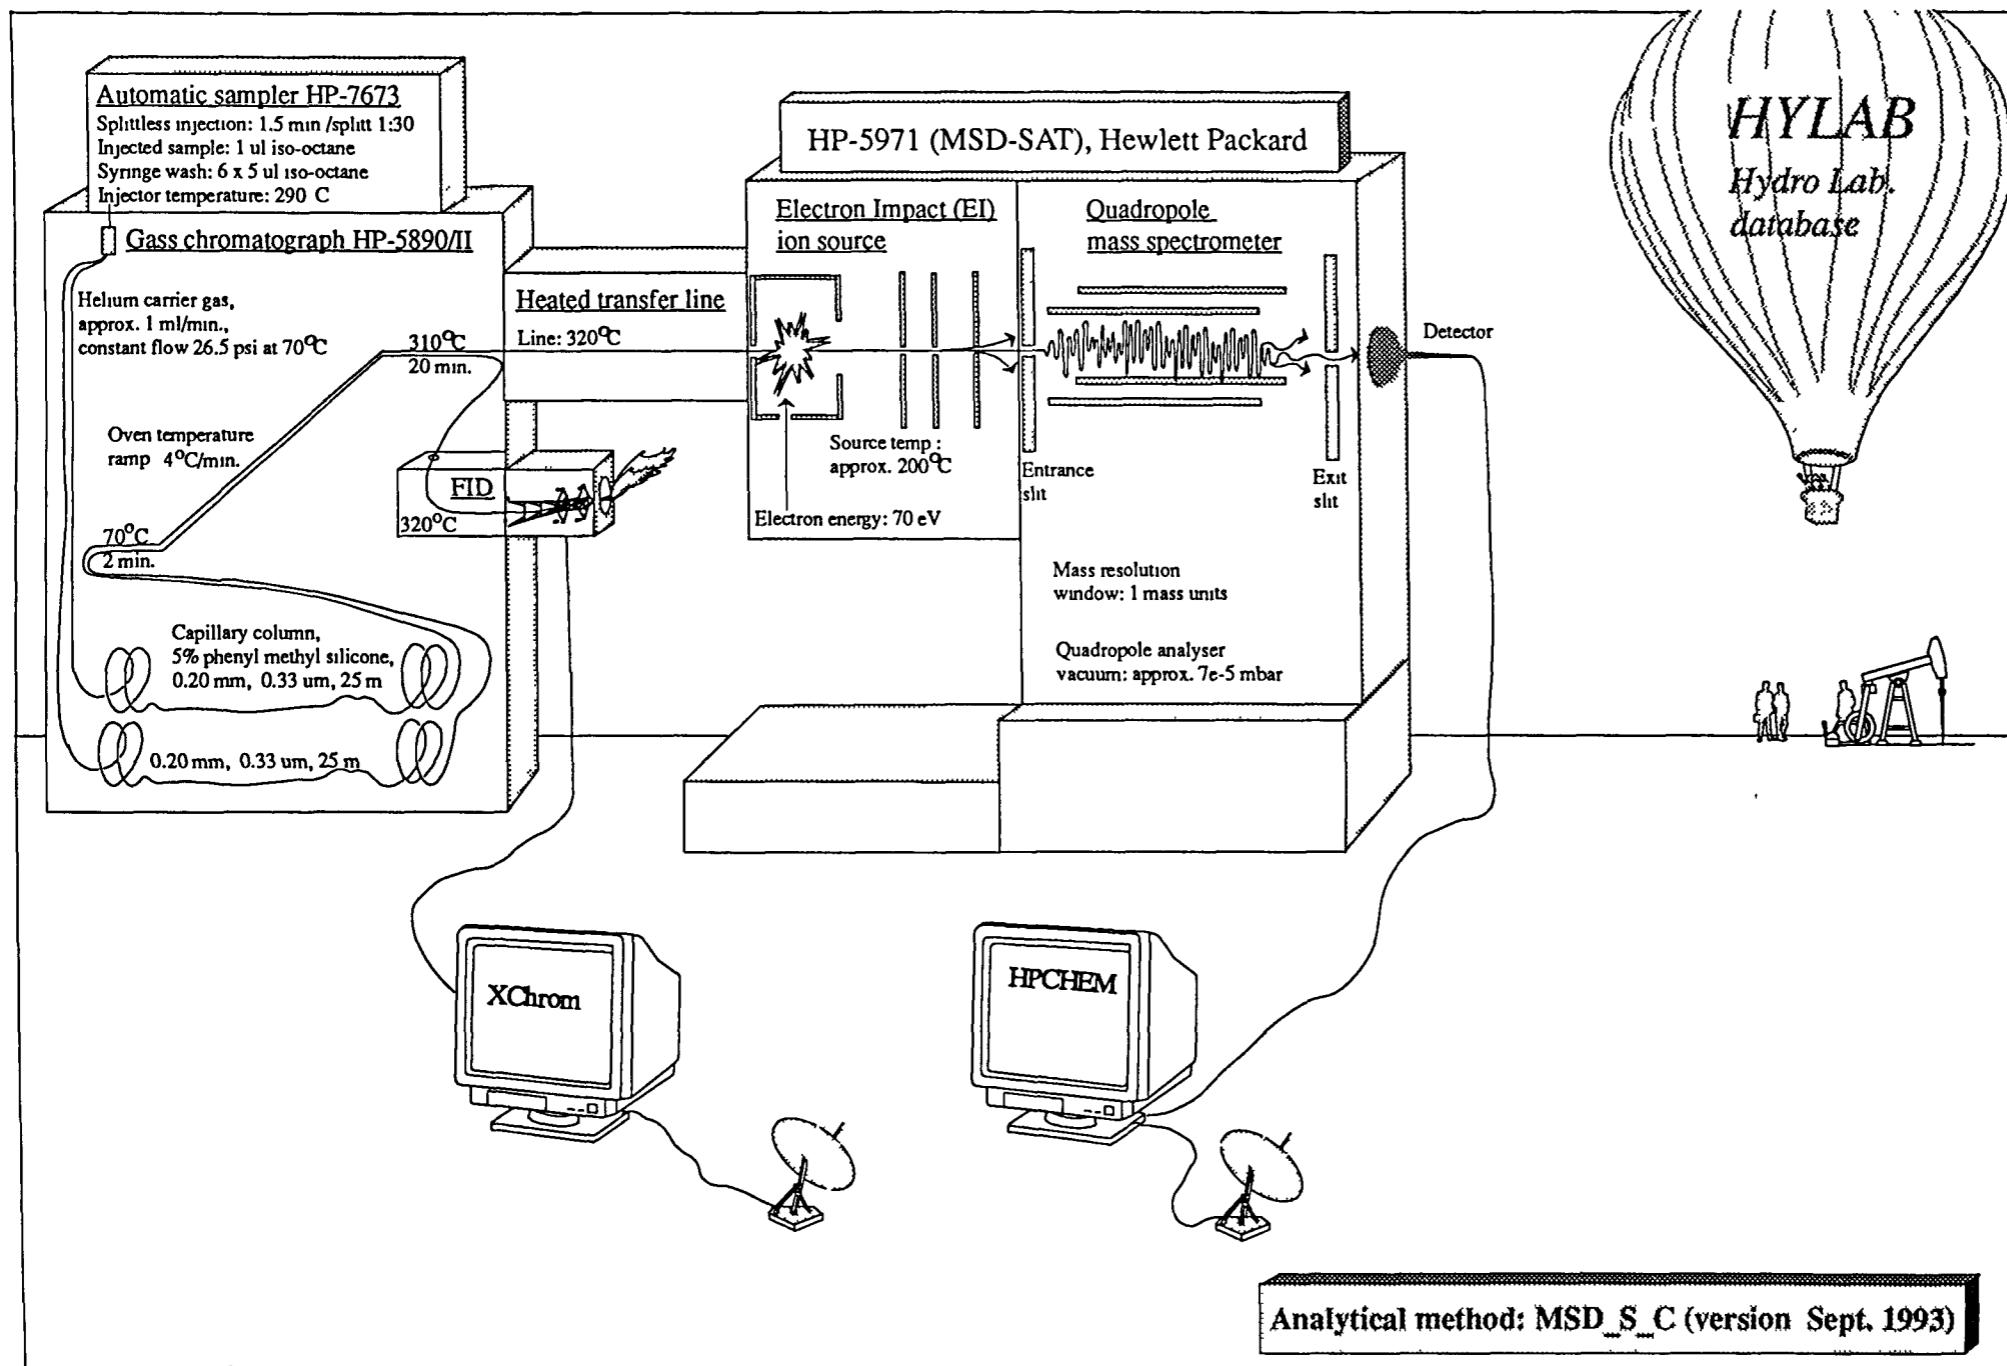

Detection parameters for pre-selected, common fragment ions:

Experiment method: MSD_S_C		Detected retention time interval: 0:10:00 - 0:70:00
-------------------------------	--	--------------------------------------------------------

Cycle time: 1 sec			
GC/FID	Inter-channel time, ms	Common fragment ions, m/z	Channel time, ms
Splitting (1:1) of the injected sample			
GC/MS			

Detected groups of compounds:

	TIC = sum of the signals from all detected ions		
1	Alkanes	15	85.1
2	Demethylated-terpanes	15	177.2
3	Terpanes	15	191.2
4	Methylated-terpanes	15	205.5
5	Steranes	15	217.2
6	Favourized 5 $\alpha$ (H),14 $\beta$ (H),17 $\beta$ (H)-steranes	15	218.2
7	Methylated-steranes	15	231.3
8	Favourized dia-steranes	15	259.3
9	Internal standard 24 $\beta$ oxo (m/z 217.2)		

## EXPERIMENTAL: GC/MS aromatic biomarkers

Analytical method:	<p>MSD_ARO1 version March 1994  <i>(Mass Spectrometric Detection Aromatic-biomarkers)</i></p>
	<p>Gas chromatographic and linked quadropole Mass Spectrometric (MS) analysis of Aromatic biomarkers. And a parallel Flame Ionization Detection (FID) of aromatic compounds.</p>
Detected compounds:	<p>Detected pre-selected groups of aromatic (ARO)-biomarkers in the aromatic group type fraction are listed on the next page.</p> <p>The MS-detected ARO-biomarkers are presented in mass chromatograms (fragmentograms) and normalised to the most abundant compound. Processed peak height data and standard peak ratios are reported.</p> <p>This semi-quantitative presentation is strictly related to the analytical method. The concentration/response ratio is not necessarily comparable between different type of compounds.</p> <p>The quantitative comparison based on the presented biomarker distributions are restricted.</p>
Method description:	<p>The samples are analysed according to the standard lab procedures for ARO-biomarker MS-detection.</p> <p>The analytical conditions are indicated on the following pages.</p> <p>The MS-detection is based on low resolution selected ion recording of a standard selection of common fragment ions. The mass window is approximately 1 mass units.</p>

Detection parameters for pre-selected, common fragment ions:

Experiment method: MSD_ARO1	Group 1 of 2	Detected retention time interval: 10-34 min.
--------------------------------	--------------	-------------------------------------------------

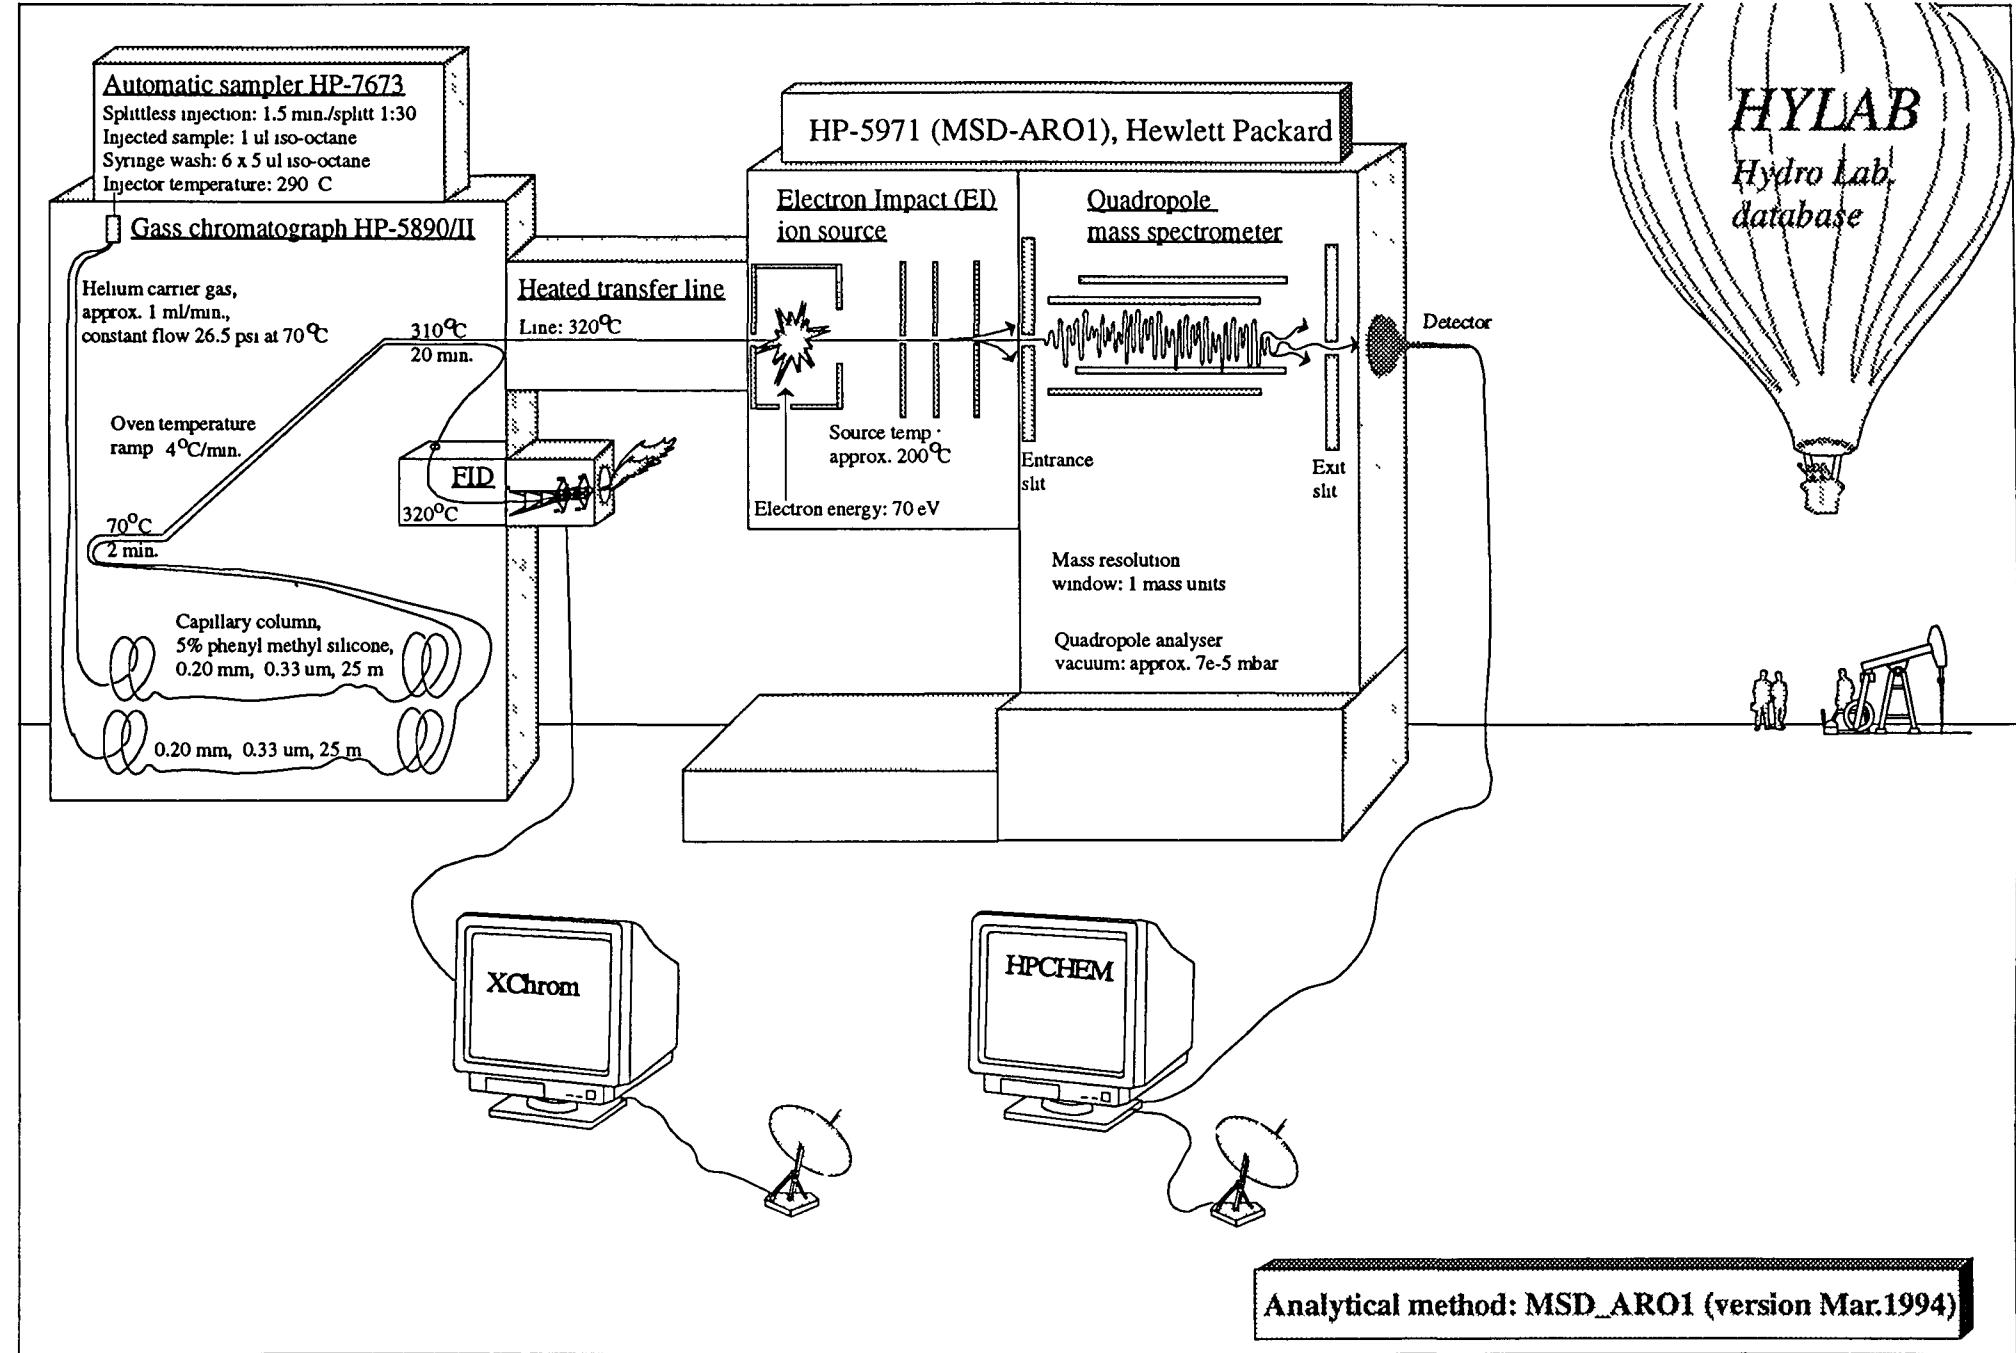

Cycle time: 1 sec		
GC/FID	Inter-channel time, ms	Common fragment ions, m/z
<u>Splitting (1:1) of the injected sample</u>		
GC/MS		Channel time, ms

Detected groups of compounds:

TIC = sum of the signals from all detected ions				
1	Aryl isopernoids	15	133	45
2	Naphthalenes and alkylated naphthalenes	15	128, 142, 156, 170	45
3	Biphenyls and alkylated biphenyls	15	154, 168, 182	45
4	Fluorenes and methyl-fluorenes	15	166, 180	45
5	Dibenzothiophene	15	184	45
6	Phenanthrenes and alkylated phenanthrenes	15	178, 192,	45

Experiment method: MSD_ARO1	Group 2 of 2	Detected retention time interval: 34-70 min
--------------------------------	--------------	------------------------------------------------

1	Aryl isopernoids	15	133	70
2	Alkylated-dibenzothiophenes	15	, 198, 212	70
3	Alkylated phenanthrenes	15	, 192, 206, 220	70
4	Retene	15	219	70
5	Monoaromatic steroids		253	
6	Triaromatic steroids	15	231	70
	Internal standards: d8-Naphthalenes		136	
	d10 Phenanthrenes		188	
	d12 Crysene		240	

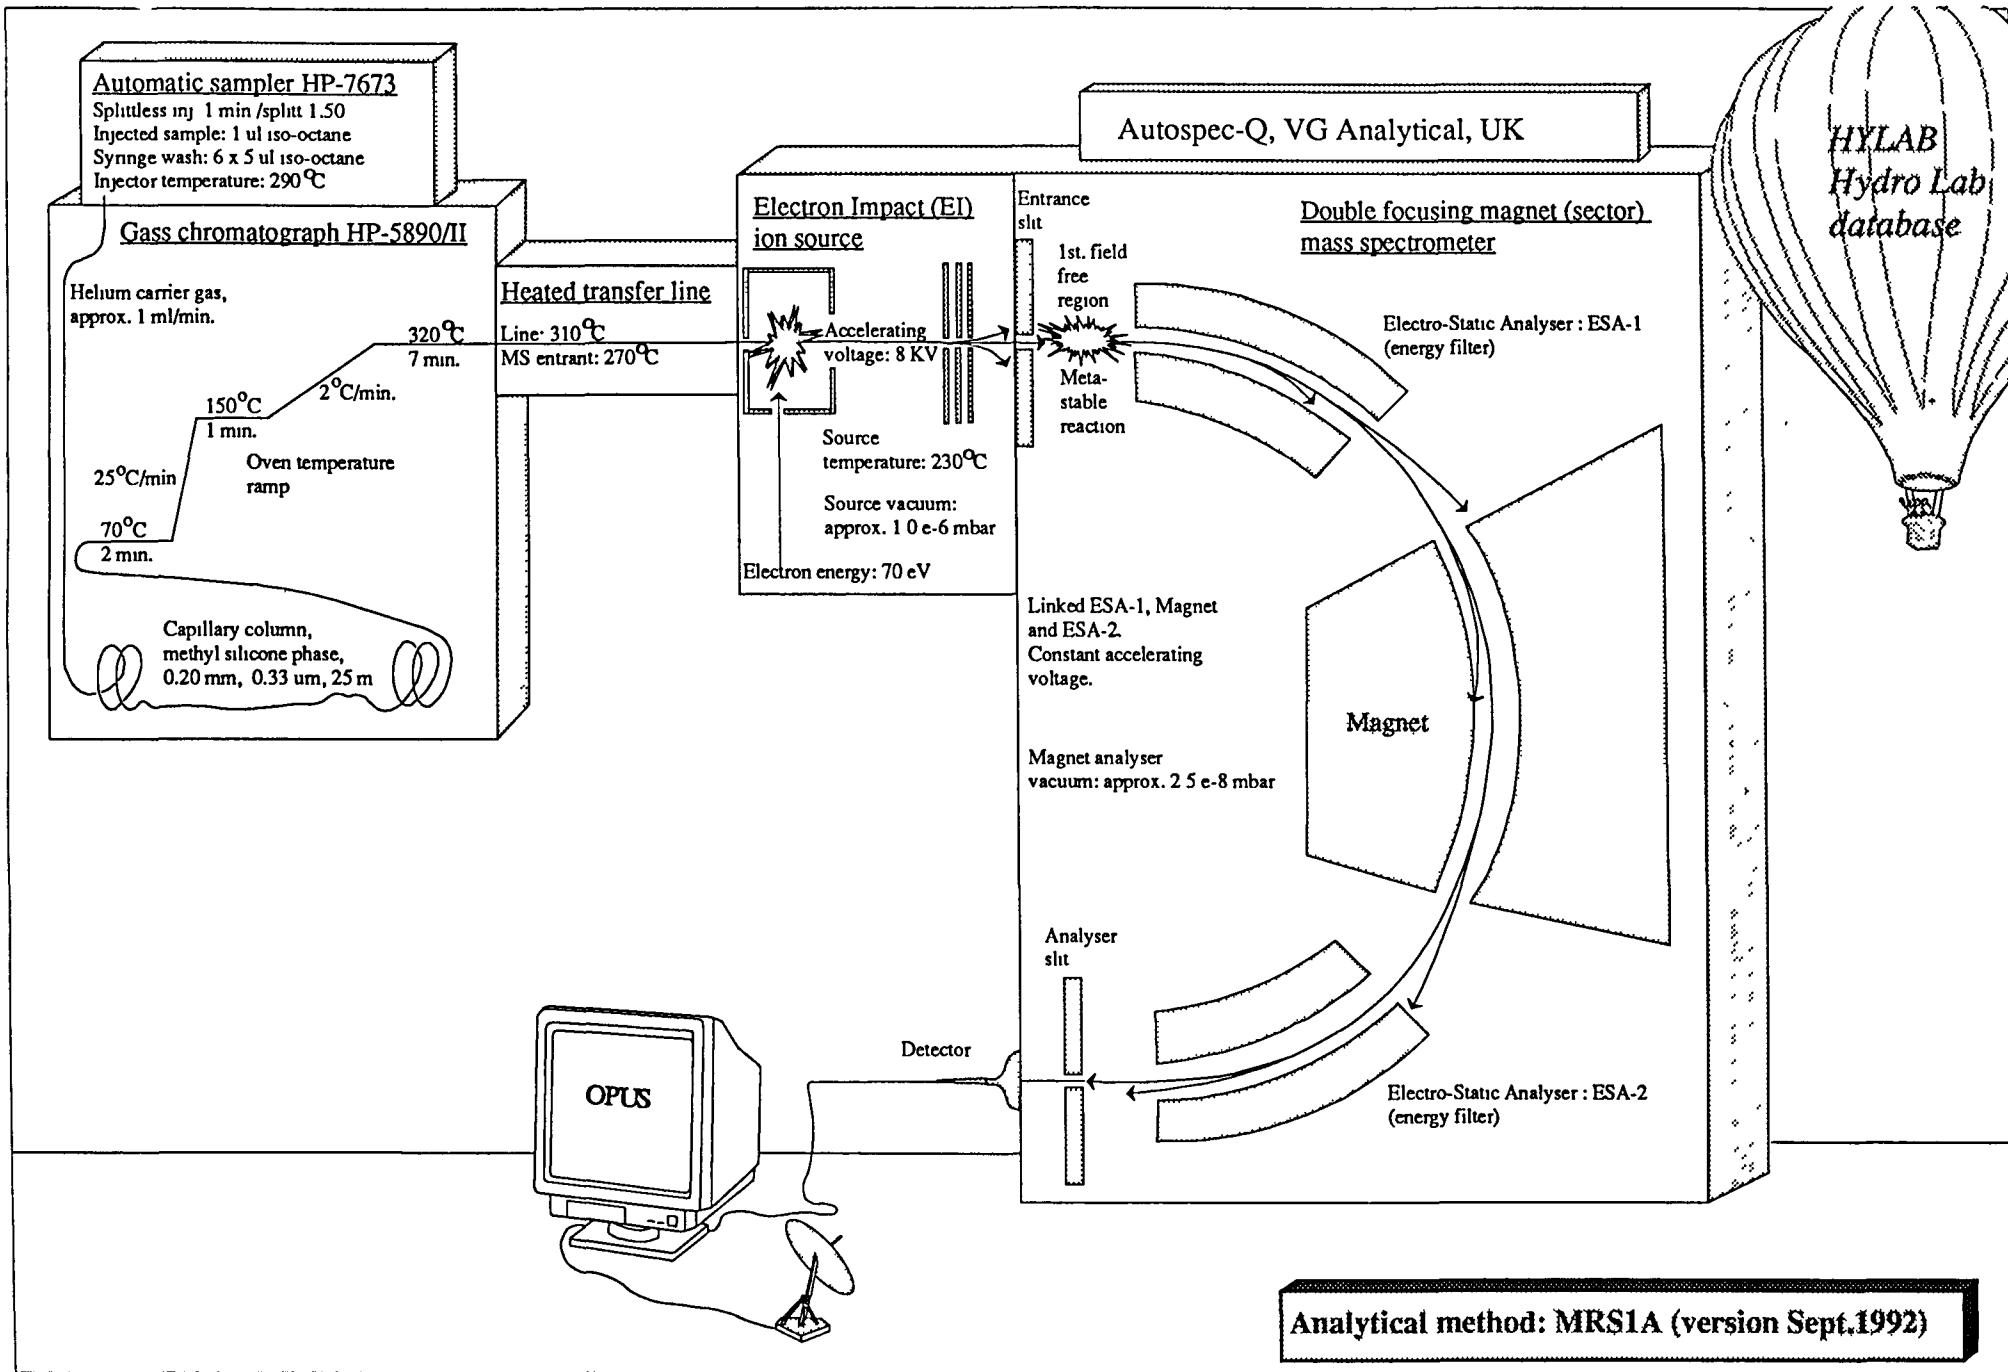

## EXPERIMENTAL: GC/MS-MRM1

Analytical method:	MRS1A version Oct.1993 (Metastable reaction monitoring version-A)
	Gas chromatographic and 1st field-free region metastable reaction monitoring analysis of saturated biomarkers.
Detected compounds:	<p>Detected pre-selected groups of saturated (SAT)-biomarkers in the saturated or mixed saturated/aromatic group type fraction are listed on the next two pages.</p> <p>The relative distribution of the detected SAT-biomarkers are presented in bargraphs as measured peak heights and normalised to the most abundant compound.</p> <p>This semi-quantitative presentation is strictly related to the analytical method. The concentration/response ratio is not necessarily comparable between different type of compounds.</p> <p>A quantitative comparison based on the presented biomarker distributions are restricted.</p> <p>Sample information, tabulated peak data and normalised bargraphs with abbreviation codes and identities of the detected SAT-biomarkers are reported.</p>
Method description:	<p>The analytical parameters are listed on the following pages.</p> <p>The metastable reaction ions which are produced in the 1st field-free region of the double focusing magnetic MS, are detected by pre-selected and linked changes of the ESA/magnet values. A constant accelerating voltage will not give an instrumental mass discrimination.</p> <p>The mass resolution is related to both parent and daughter ions,- as a function of the metastable transition (daughter<sup>2</sup>/parent). Typically, a detection of C27-steranes (m/z 372--217) will have a significant contribution from the D2-C27-sterane transition (m/z 374--219).</p>

**Detection parameters for pre-selected parent-daughter ion transitions:**

Experiment method: MRS1A (Oct. 1993)	Analytical function: #1 of 2	Detected retention time interval: 0:20:00 - 0:53:50				
Cycle time: 900 ms		Inter-channel time, ms	Parent ion, m/z	Metastable transition	Daughter ion, m/z	Channel time, ms
Detected compounds						
1 C-20 Tricyclic-terpanes	60	276.28			191.18	40
2 C-21 Tricyclic-terpanes	40	290.28			191.18	40
3 C-23 Tricyclic-terpanes	40	318.33			191.18	40
4 C-24 Tricyclic-terpanes	40	332.34			191.18	40
5 C-25 Tricyclic-terpanes	40	346.35			191.18	40
6 C-26 Tricyclic-terpanes	40	360.38			191.18	40
7 C-24 Tetracyclic-terpanes	40	330.33			191.18	40
8 C-21 Steranes	40	288.28			217.2	40
9 C-22 Steranes	40	302.3			217.2	40
10 C-23 Steranes	40	316.31			217.2	40

Experiment method: MRS1A (Oct. 1992)	Analytical function: #2 of 2	Detected retention time interval: 0:54:00 - 1:35:00				
Cycle time: 1300 ms		Inter-channel time, ms	Parent ion, m/z	Metastable transition	Daughter ion, m/z	Channel time, ms
Detected compounds						
1 C-27 Pentacyclic-triterpanes	60	370.38			191.18	40
2 C-28 Pentacyclic-triterpanes	40	384.38			191.18	40

16 C-29 Methyl-steranes	40	400.41			231.21	40
17 C-30 Methyl-steranes	40	414.42			231.21	40

## RESULTS

The data are presented by increasing depths and accordingly:

1. Results from the **Saturated biomarker** GC/MS analysis:  
method: MSD\_S\_C
  - \* MS-detected compounds and annotations.
  - \* Tabulated compound data.
  - \* Compound data, peak ratios and normalized mass chromatograms.
2. Results from the **Aromatic biomarker** GC/MS analysis:  
method: MSD\_ARO1
  - \* MS-detected compounds and annotations.
  - \* Tabulated compound data.
  - \* Compound data, peak ratios and normalized mass chromatograms.
3. Results from the **Saturated biomarker** GC/MS-MRM1 analysis  
method: MRS1A
  - \* Detected compounds and annotations.
  - \* Tabulated peak height data.
  - \* Normalized bargraphs of the SAT-biomarker distributions.

The information on the samples which are prepared by the Geochem Group are reported in:  
Reservoir geochemical data, Well 6507/2-3, report # 94/9291/01/01, Aug. 1994

:

## Results from the GC/FID and GC/MS method: MSD\_S\_C

- \* MS-detected compounds and annotations.
- \* Tabulated compound data.
- \* Compound data, peak ratios and  
normalized mass chromatograms.

**Detected compounds and annotations according to the "Norwegian Industry Guide to Organic Geochemical Analysis, Feb.1993":**

# Results from the GC/FID and GC/MS method: MSD\_ARO1

- \* MS-detected compounds and annotations.
- \* Tabulated compound data.
- \* Compound data, peak ratios and  
normalized mass chromatograms.

**Detected compounds and annotations accororing to the "Norwegian Industry Guide to Organic Geochemical Analysis, Feb. 1993":**
