FINAL WELL REPORT

WELL 30/9-19

JUNE 1999

LIST OF CONTENTS, WELL 30/9-19

PREFACE

License PL 079 was awarded to the Norsk Hydro PL 079 license group in 1982 with Norsk Hydro as the operator.

The licensees' percentage share of the block is as follows:

Den Norske Stats Oljeselskap a.s. (Statoil)	73.5%
Norsk Hydro ASA (operator)	16%
Saga Petroleum ASA	10.5%

The well was drilled by Norsk Hydro ASA., on behalf of the group, during September-October 1998 (see Location Map, page II).

All depths in this report are mMD RKB unless otherwise stated

SECTION A

GEOLOGY

LIST OF CONTENTS SECTION A

SECTION A: LIST OF FIGURES, TABLES AND APPENDICES

1 OBJECTIVES

The 30/9-19 well was the sixth well in PL 079, but the first to be drilled on the Delta structure. The well tested the DeltaN1 compartment in the northern part of the Delta structure, i.e. between the 30/9 B-structure and the A-Structure in Block 30/8. The main target of the well was the Brent deltaic sands of the Tarbert Fm., but the well was also planned to test additional potential within the Ness and Oseberg-Rannoch-Etive (ORE) formations.

The primary objectives were to:

- Test the potential of the Delta N1 prospect in an area of good seismic control/quality
- Identify fluid types and distribution in an optimal position balancing a potentially shallow and deep filling respectively
- Confirm the geological model with respect to reservoir quality
- Gather vital pressure data to help identify likely pressure cell boundaries

2 RESULTS

The well was spudded 9.Sept. 1998 and reached a total depth of 3560 m RKB in Dunlin Gp. on 17.Oct. 1998. The well was permanently plugged and abandoned as a gas/oil discovery 22.Dec. 1998.

The main results were as follows:

- The Tarbert 2 main reservoir was penetrated at 3138 mRKB, 22 m shallower than prognosed. A total of 66.5 m net reservoir was calculated between 3138 mRKB and 3216 mRKB, giving a net/gross ratio of 0.85. The well confirmed the geological reservoir model. The reservoir properties are fairly good with average porosity about 19%, and permeability measurements generally ranging between 10 mD and 1000 mD.

- The Tarbert 2 main reservoir is filled by gas showing internal static pressure communication throughout the whole unit.

- The Tarbert 1 reservoir was penetrated at 3238 mRKB, 27 m shallower than prognosed. A total of 12 m of net sand was calculated including a sand layer within the lowermost Tarbert 2 unit (otherwise a non-reservoir), assumed to be in static pressure communication with the Tarbert 1 sand. Measured permeabilities are between 100-1000 mD for the Tarbert 1 sand and about 1-60 mD for the overlying sand.

- The Tarbert 1 sand together with the overlying sand unit contains oil throughout, interpreted to be in static pressure communication. There is no direct pressure communication between the Tarbert 1 oil and the gas within the main Tarbert 2 reservoir above.

- An allochthonous Ness block (3062.5 - 3087 mRKB) has been interpreted from within the Lower Cretaceous section, supposed to be a slide associated with degradation of the major fault zone to the east. This "block" contains a thin sand layer (3072-3075 mRKB) which is filled by gas.

- Gas was also encountered in a channel sand within the lowermost Ness (3452 - 3456.5 mRKB).

- Top ORE was penetrated at 3484.5 mRKB, 62.5m shallower than prognosed. The unit was thinner and of less reservoir quality than prognosed. Permeability measured within the lower Rannoch/Oseberg are mostly between 0.02 - 2 mD. The uppermost 5.5 m of Etive is of better quality but no cores were obtained from this part.

- Three cores were cut in the well. Core no 1 (3184 - 3240 m) and core no 2 (3240 - 3247 m) were cut from Tarbert 2 and Tarbert 1, while core no 3 (3494 - 3522 m) was cut from ORE.

- The Tarbert reservoir is overpressured by around 15 bar. The overpressure is increasing downwards through the Ness Formation to about 80 bar within the ORE unit.

3 BIOSTRATIGRAPHY

The biostratigraphical analysis of well 30/9-19 was carried out by Stratlab AS. The analysed interval was 1530m - 3560mRKB (TD). The results are documented in the 30/9-19 Routine Biostratigraphical Report (REF YYY) The results have further been evaluated and interpreted according to Norsk Hydro internal biozonation system and are presented in Fig.3.1.

The main results of the analysis can be summarised as follows:

- The youngest sediments analysed (at 1530m) are claystones from the Hordaland Gp of Early Oligocene age.

- The Late Eocene interval is thin in this well, suggesting a truncation or condensing towards the top of the Eocene.

- There is also a small unconformity at the Cretaceous - Tertiary transition, in that the lowermost biozones of the Paleocene (PT1A and PT1B) are not identified in the well.

- The oldest sediments of the Late Cretaceous are of Turonian age (possible Early Turonian).

- Sediments of Cenomanian age are not identified in this well.

- The thickness from the top of the Early Cretaceous Cromer Knoll Gp to the top of the Draupne Fm ("Base Cretaceous") is approximately 50m in this well. The upper part (3040m - 3062.5m) consists of in situ sediments of Late Albian and Late Aptian age, separated by unconformities. The lower part consists of an allochthonous block of Ness Fm sediments, of Bajocian age, located at the top of the Viking Gp / Draupne Fm.

- The Viking Gp/Draupne Fm consists of sediments of Ryazanian and Kimmeridgian ages, separated by an unconformity, covering the Volgian and probably parts of Kimmeridgian and Ryazanian.

There is a major unconformity between the Kimmeridgian and the underlying Middle Jurassic, Early Bathonian sediments of the Brent Gp / Tarbert Fm, implying that no Heather Fm sediments are present in the well.

- The main reservoir interval in this well is of Bajocian age.

- At 3512.55m (core) sediments of Late Toarcian age was reached.

4 LITHOSTRATIGRAPHY

All depths are in mMD RKB (RKB elevation is 29m). At levels where the well is deviated the depths are also given in mTVD RKB.

This summary is compiled predominantly from ditch cuttings descriptions. A total of 3 conventional cores were cut in the interval from 3184m to 3522 m in the well, see Table 6.1.

Wireline and MWD logs were used to aid lithological interpretation and the placement of formation boundaries.

The well was drilled with returns to seabed from the seafloor at 134 m to 1205 m before setting 20" casing at 1198m. Lithology interpretation through this interval is based on MWD logs and drilling parameters. The first drill cuttings samples were taken at 1210 m.

4.1 Nordland Group (134-933m)

134-292.5m

This interval comprises Sand with minor Clay, and traces of Boulders from 217 to 231m.

Age: Quaternary

292.5-586.5m

This interval comprise Clay, silty Clay and traces of Sand.

Age: Undifferentiated Quaternary - Tertiary

586.5-622.5m

This interval comprises Sand.

Age Undifferentiated Tertiary

622.5-644.5

This interval consists of Clay with minor Sand.

Age: Undifferentiated Tertiary

Utsira Formation (644.5-933m)

This interval comprises Sandstone.

Age: Miocene

4.2 Hordaland Group (933-2119m)

933-1205m

This interval comprises alternating Sandstone and Claystone

Age: Undifferentiated Tertiary

1205-1257m

This interval consists of Claystone

CLAYSTONE:	medium - dark yellowish brown, soft - firm, subblocky - subtabular, non - slightly calcareous, non - slightly silty, rare - trace glauconite, rare carbonaceous material, rare micropyrite

Age:Oligocene

Grid Formation (1257 - 1380.5m)

This interval comprises Sandstone

SANDSTONE:	clear - translucent quartz, fine - medium, rounded - subangular, trace angular, predominantly loose grains, non calcareous, glauconitic in part

Age: Oligocene

1380.5 -1520m

This interval comprises Claystone with minor Sandstone

CLAYSTONE:	medium - dark yellowish brown grey, light olive grey, soft - firm - non calcareous, slightly silty - silty, rare glauconite, rare carbonaceous material
SANDSTONE:	clear - translucent quartz, very fine - medium, locally coarse, subrounded - rounded, moderate - good sphericity, bimodal, moderate - well sorted, locally very poor sorted, common loose grains, locally intercal with claystone and argillaceous siltstone

Age: Oligocene

1520-1552m

This interval comprises Sandstone

SANDSTONE:	clear - translucent occasionally opaque quartz, dominantly fine - medium, locally very fine, occasionally coarse, subrounded - subangular, occasionally well rounded, moderate sphericity, dominantly moderate - well sorted, rare weak silica/dolomite cement, common weak white amorphous soft kaolin matrix, occasionally red hematite coated grains, locally common glauconite, pyrite, citrine, rare calcareous sponge spicules

Age: Oligocene

1552-1613m

This interval comprises Sandstone with minor Claystone

SANDSTONE:	light grey - off white, occasionally pale yellowish grey - pale dusky yellowish brown, clear - translucent quartz, dominantly medium - locally fine, rare coarse, with dominantly argillaceous/calcareous matrix
CLAYSTONE:	olive grey - dusky yellowish brown, firm, moderately hard in parts, subblocky - subtabular, hygroclastic, becoming moderate - slightly calcareous, with abundant loose sand and glauconit included, common micromica

Age: Oligocene

1613-2119m

This interval comprises varicoloured Claystone with stringers of Limestone and Dolomitic Limestone

(1613-1700m) CLAYSTONE:	olive grey, dusky yellowish brown, firm, occasionally moderate hard, subblocky - subplaty, non - slightly calcareous, slightly silty, glauconitic, with included sand grains in part
DOLOMITIC LIMESTONE:	moderate - dark yellowish brown, greyish orange, firm - hard, occasionally very hard, blocky, microcrystalline, occasionally cryptocrystalline

(1700-1950m)

CLAYSTONE: dark greenish grey, olive grey, occasionally dusky yellowish brown, rare medium bluish grey, firm - hard, subblocky - subtabular, non calcareous, slightly silty, glauconit

DOLOMITIC LIMESTONE: moderate brown, hard - very hard, blocky, sharp breaks, cryptocrystalline

LIMESTONE: moderate yellowish brown, firm, blocky, earthy texture, microcrystalline, slightly dolomitic in parts, grading dolomitic limestone

(1950-2119m)

CLAYSTONE: dark greenish grey - olive grey, occasionally dusky yellowish brown, becoming light brownish grey - pale reddish brown, from 1974m: becoming dominant dusky yellowish brown - pale reddish brown, with common dark greenish grey, firm, subblocky - subtabular, homogenous, moderate calcareous, trace micromica, locally very fine sandy grains included, interbedded with thin limestone/dolomitic limestone stringers

DOLOMITIC LIMESTONE: light brown - dark yellowish orange, occasionally moderate brown, hard - very hard, blocky, sharp breaks, cryptocrystalline, grading dolomite in parts

LIMESTONE: dark orange yellow - light brown, firm - soft, blocky, earthy texture, microcrystalline, interbedded with claystone

Age: Eocene

4.3 Rogaland Group (2119-2409m)

The Rogaland Group consists of the Balder, Sele, Lista and Våle Formations.

Balder Formation (2119-2172m)

This interval comprises Claystone with minor Tuff and stringers of Limestone.

CLAYSTONE: olive grey - brownish grey, greenish grey - dark greenish grey, subblocky - subplaty, soft - firm, slightly calcareous, slightly silty, rare micromica, micropyrite

TUFF: various colours, greyish orange, bluish grey, occasionally pale reddish purple - pale purple, very pale greenish blue - very pale bluegrey, locally common cream, rare medium dark greyish green, soft, rounded ctgs, ashy appearance common silty, black speckles, locally abundant lith deb, corroded feldspars, very rare trace lapilli, very rare clay flasers

LIMESTONE: pinkish grey, greyish orange, soft - moderately hard, microcrystalline.

Age: Early Eocene - Late Paleocene

Sele Formation (2172-2249m)

This interval comprises Claystone with trace of Sandstone and Limestone

CLAYSTONE: medium dark grey, brownish grey - olive black, soft - firm, slightly hygroclastic - hygroturgid, subblocky, locally common very fine sand and silt grains included, locally abundant very fine disseminated micropyrite, non - slightly calcareous, occasionally moderate calcareous, common micromica, pyrite

SANDSTONE: light olive grey, clear - translucent quartz, fine - medium, common lose

LIMESTONE: white - light brown, soft - firm, occasionally hard, brittle, sharp breaks, occasionally earthy texture, microcrystalline - cryptocrystalline, silty, dolomitic in parts

Age: Late Paleocene - Earliest Eocene

Lista Formation (2249-2339)

This interval comprises Claystone with stringers of Limestone and trace Sandstone

CLAYSTONE: varicoloured, greenish grey - dark greenish grey, olive black, dusky brown, moderate brown , light grey, reddish grey, medium - dark grey, bluish grey becoming predominantly olive black, olive grey, greyish brown, soft - firm, blocky - subblocky, non - slightly calcareous, locally silty - very fine sandy, rare pyrite nodules

LIMESTONE: white, soft, blocky, earthy texture, microcrystalline

SANDSTONE: clear - translucent quartz, fine - medium, subangular - subrounded, .occasionally angular, loose

Våle Formation (2339-2409)

This interval comprises Claystone with stringers of Limestone and Dolomite

CLAYSTONE:	olive black - olive grey, friable - moderate hard, blocky, non calcareous, slightly silty, trace carbon/glauconite, trace very fine sandy, rare micromica, locally rare pyrite nodules
CLAYSTONE:	olive grey, firm - moderate hard, blocky, moderate - very calcareous, slightly silty, trace carbonaceous/glauconitic, rare micromicaceous.
LIMESTONE:	very light - light grey, minor pale yellow brown, light brownish grey, moderate hard - friable, blocky, crypto - microcrystalline, locally sucrosic, locally argillaceous, locally dolomitic
DOLOMITE:	dark - pale yellowish brown, hard, brittle, blocky, cryptocrystalline, slightly argillaceous, slightly calcareous
Age:	Late Paleocene

4.4 Shetland Group (2409-3036m)

The Shetland Group consists of Ekofisk, Tor, Jorsalfare, Kyrre, and Tryggvason Formations.

Hardråde/Tor Formation (2409 - 2438,5 m)

This interval comprises Limestone with stringers of Claystone.

LIMESTONE:	white to very light grey, moderately hard - friable, blocky, micro - predominantly cryptocrystalline, locally common glauconitic.
CLAYSTONE:	olive grey - dark greenish grey, firm - soft, sub blocky, slightly - very calcareous, silty, carbonaceous/glauconitic.
Age:	Late Maastrichtian

Jorsalfare Formation (2438,5 - 2652m)

This interval comprises Claystone with minor Limestones.

CLAYSTONE:	olive grey - dark greenish grey, olive black, firm - soft, sub blocky, slightly - very calcareous, silty, carbonaceous/glauconitic.

LIMESTONE:	white to very light grey, trace light olive grey, moderately hard - friable, blocky, micro - predominantly cryptocrystalline, locally common glauconitic.
Age:	Early - Late Maastrichtian

Kyrre Formation (2652-2954 m)

This interval comprises Claystone with Limestone stringers.

(2652-2830M) CLAYSTONE:	olive grey - dark greenish grey, local trace dark greenish grey, firm - moderately hard, locally sticky, locally soluble, sub blocky - amorphous, non - very calcareous, predominantly slightly - moderately calcareous, trace very fine sandy, carbonaceous/glauconitic, rare pyrite, rare micromicaceous.
(2660M) TRACE CLAYSTONE:	dusky brown - moderate brown, firm - moderately hard, sub blocky, very - moderately calcareous, carbonaceous/glauconitic.
LIMESTONE:	white - very light grey, moderately hard, brittle, blocky - platy, micro - predominantly cryptocrystalline, local trace glauconitic.

This interval comprises Claystone with Limestone and Dolomite stringers.

(2830-2954M) CLAYSTONE:	olive grey - olive black, dark greenish grey, firm - moderate hard, locally soft, locally soluble, blocky - amorphous, slightly - predominantly non calcareous, slightly silty - silty, trace very fine sandy, carbonaceous/glauconitic, locally rare pyrite nodules/micropyrite, rare micromica
LIMESTONE:	white - very light grey, moderately hard - firm, brittle, blocky - platy, micro - predominantly cryptocrystalline, clean, local trace glauconitic.
DOLOMITE:	dark - yellow brown, hard, brittle, blocky, crystalline - cryptocrystalline
Age:	Late Campanian - Late Turonian

Tryggvason Formation (2954-3036 m)

This interval comprises Claystone, Marl and Limestone

(2954-3036M)

CLAYSTONE:	olive black, firm - moderate hard, blocky - subblocky, slightly calcareous, slightly silty, micromicaceous
MARL:	medium grey - medium light grey, soft, subblocky, fissile, rare carbonaceous material, slightly silty, rare pyrite, rare glauconitic
CLAYSTONE:	dark - medium dark grey, medium grey - olive grey, trace light olive grey - medium light grey, soft - firm, occasionally moderate hard, subblocky, partly plastic, partly brittle, slightly - very calcareous, trace grading marl, partly carbonaceous, partly glauconitic, partly micropyritic, rare micromica
LIMESTONE:	light - very light grey, medium light grey - medium dark grey, soft - moderate hard, friable, blocky, microcrystalline, partly suc, partly glauconitic, partly argillaceous grading claystone, partly clean
Age:	Coniacian - Early Turonian

4.5 Cromer Knoll Group (3036 - 3087 m)

Rødby Formation (3036-3062.5m)

This interval comprises claystone.

(3036-3062.5M)

CLAYSTONE:	predominantly olive grey, minor medium dark grey, soft - moderate hard, predominantly firm, subblocky, moderate - very calcareous, partly grading marl, slightly - very silty, locally glauconitic, locally micropyr
Age:	Late Albian - Late Aptian

Allochthonous Ness Block (3062.5-3087m)

This interval comprises alternating claystones with coal stringers.

(3062.5-3087M)

CLAYSTONE:	olive black - olive grey, soft - moderate hard, predominantly firm, subblocky, non - slightly calcareous, partly grading marl, slightly - very silty, locally glauconitic, locally micropyritic

CLAYSTONE:	moderate brown, soft - firm - sticky, subblocky - amorphous, sol, moderate - predominantly non calcareous, slightly silty, rare micromica
COAL:	black, hard - brittle, blocky, silty texture, trace micropyr, slightly argillaceous

Age: Bajocian - ?Early Bajocian

4.6 Viking Group (3087 - 3092.5 m)

The Viking Group consists of the Draupne Formation.

Draupne Formation (3087- 3092.5 m)

This interval consists of Siltstone and Sandstone as below.

Age: Ryazanian - ??Early Kimmeridgian

4.7 Brent Group (3092.5-3510m)

Tarbert 4 Formation (3092.5 - 3113 m)

This interval consists of Siltstone and Sandstone.

SILTSTONE:	olive black - brown black, dusky yellow brown, moderate hard - friable becoming predominantly soft at bottom, blocky, non calcareous - very calcareous becoming non calcareous at bottom, argillaceous grading claystone, common micromica, common micropyrite, carbonaceous, very fine sandy, locally platy fragments, rare glauconit
SANDSTONE:	Quartz, very fine - fine, subangular, spherical, moderately sorted, as loose grains

Age: Early Bathonian

Tarbert 3 Formation (3113 - 3138 m)

This interval consists of Siltstone Sandstone and minor Limestone.

SILTSTONE:	olive black - brown black - dusky yellow brown, moderate hard - friable - soft, blocky, brittle - friable, non - very calcareous, argillaceous grading claystone common micromica, common micropyrite, cardonasceous, very fine sandy, locally platy fragments, rare glauconit

SANDSTONE:	dusky yellow brown - olive black, clear quartz, very fine - fine, subangular, spherical, moderately sorted, friable - loose, non calcareous, very argillaceous/silty matrix, grading siltstone, mica, carbon, rare glauconite, no visible porosity
LIMESTONE:	medium light grey, firm - soft, cryptocrystalline, argillaceous partly grading claystone.
Age:	Bajocian (?Late)

Tarbert 2 Formation (3138 - 3238m)

This interval consists of sandstone, siltstone, coals and limestone.

SANDSTONE:	dusky yellow brown - olive black, clear translucent quartz, fine - medium, trace coarse, subangular - subrounded, moderately sorted, mica, pyrite, partly cemented, firm - hard, poor visible porosity
SILTSTONE:	olive black - brown black - dusky yellow brown, moderate hard - friable, blocky, brittle - friable, non - very calcareous, argillaceous grading claystone, common micromica, common micropyrite, carbon, very fine sandy, locally platy fragments, rare glauconite
LIMESTONE:	white - medium bluish, soft - firm, argillaceous, cryptocrystalline
COAL:	black, hard, shiny, conchoidal, pyritic, laminated
Age:	Bajocian (?Late)

Tarbert 1 Formation (3238 - 3264.5 m)

This interval consists of sandstone and claystone.

SANDSTONE:	brown black - dusky yellow brown becoming pale yellow brown - pale yellow, grey brown, clear - opaque and translucent quartz grains, predominantly medium -fine, rare coarse - very coarse, subangular - subrounded, moderate spherical, moderately - well sorted, friable becoming moderately - well silica cemented, in parts slightly calcite cemented, abundant oil stain, rare massive pyrite, trace mica, locally argillaceous - carbonaceous, moderate - poor intergranular porosity, commonly carbonaceous coated grains

CLAYSTONE:	olive grey - olive black, becoming greyish brown - light greyish brown, firm - moderately hard, blocky, non calcareous
Age:	Bajocian (?Late)

Ness Formation (3264.5 - 3484.5 m)

This interval consists of claystone and sandstone with siltstone, occasional coal interbeds.

(3264.5-3417.5m)

CLAYSTONE:	olive grey - olive black, becoming greyish brown - light greyish brown, firm - moderately hard, blocky, non calcareous
SANDSTONE:	light - medium grey, clear - translucent quartz, fine - very fine, locally medium, firm, subangular - subrounded, moderate - well sorted, non calcareous, trace coal, pyrite, rare mica
SILTSTONE	olive black - olive grey, medium grey - dark grey, soft - firm, blocky
COAL:	black, hard - very hard, brittle, pyrite

This interval consists of sandstone with claystone, and minor siltstone and thin coaly interbed.

(3417.5-3450m)

SANDSTONE:	dominantly white - slightly pale yellowish grey, common translucent - opaque, dominantly very fine - fine, locally becoming medium, subangular, subrounded, well sorted, slightly dolomitic cement, common argillaceous matrix, kaolin, abundant mica flakes, locally abundant coal fragments
CLAYSTONE:	pale yellowish grey, brownish grey, becoming medium black - reddish black, mica flakes, becoming silty, in parts grading argillaceous siltstone.
SILTSTONE:	pale yellowish brown, firm, blocky, locally abundant carbonaceous material and micromica, occasionally very fine sand grains

COAL: black - reddish black, firm - soft in parts, subblocky - subfissile, occasionally micropyrite

This interval consists of sandstone with claystone, siltstone, thin coals and minor limestone

(3450-3484.5m)
SANDSTONE: milky white, milky white - clear quartz, occasionally opaque, dominantly fine - very fine, locally becoming medium - rare coarse, very rare very coarse, bimodal, subangular - angular, common subangular - subrounded, poor - moderate sorted, silica and rare pyrite cement, hard - locally friable, kaolin matrix common, locally abundant coal fragments

CLAYSTONE: pale yellowish grey - brownish grey, brownish black - greyish black, common pale yellowish brown - dusky yellowish brown, firm - moderately hard, brittle in parts, occasionally earthy texture, locally sharp breaks, micromicaceous and coaly debris, becoming silty in parts, grading argillaceous siltstone

SILTSTONE: dusky yellowish brown, becoming light grey in parts, firm - soft, blocky, locally abundant coal fragments and mica flakes, common very fine sand grains, very argillaceous, earthy texture

COAL: black - blackish brown, hard - firm, brittle, conchoidal fracture, shiny lustre, v argillaceous grading carbonaceous claystone

LIMESTONE: white, soft - firm, blocky, chalky texture, microcrystalline

Age: Early - ?Late Bajocian

Etive Formation (3484.5 - 3490 m)

This interval consists of sandstone with claystone.

SANDSTONE: milky white - common pale yellowish brown (oil stain), dominantly milky - translucent quartz, common opaque, medium - fine, locally coarse, bimodal, locally very fine - fine, moderate well - poorly sorted, angular - subangular, loose in parts, silica cement, moderate - poor intergranulated porosity, else as above.

CLAYSTONE: pale yellowish grey - brownish grey, brownish black - greyish black, common pale yellowish brown - dusky yellowish brown, firm - moderately hard, brittle in parts, earthy texture

	occasionally, locally sharp breaks, micromicaceous and coaly debris, becoming silty in parts, grading argillaceous siltstone
Age:	?Aalenian

OR Formations (3490 - 3510m)

This interval consists of sandstone with claystone as above.

Age: ?Aalenian

4.8 Dunlin Group (3510 - 3560 m; TD)

Drake Formation (3510 - 3560m)

This interval consists of claystone and siltstone, with minor sandstone and limestone

CLAYSTONE:	greyish black - brownish black, becoming dusky yellowish brown - pale yellowish brown, firm - soft, locally slightly sol, generally subblocky - subfissile, earthy texture in parts, grad very silty claystone, very micaceous, locally abundant pyrite, coaly and carbonaceous debris, very micropyrithic in parts, becoming intercal with very thin sandy beds
SILTSTONE:	brownish black - greyish black occasionally, becoming dusky yellowish brown, hard - very hard, becoming firm - hard, blocky - subfissile, very micaceous, with abundant very sand grains, occasionally with massive crystalline pyrite, trace coaly plant remnants, coal debris common, locally calcareous, very argillaceous grading claystone in parts
SANDSTONE:	milky white - clear sandstone, milky - clear - translucent quartz, fine . very fine, firm - hard, calcite cemented, common loose, becoming silty grading siltstone
LIMESTONE:	white, firm - soft, blocky, chalky texture, microcrystalline
Age:	Late Toarcian

5 HYDROCARBON SHOWS

The evaluation of hydrocarbon shows at the wellsite was carried out in a conventional manner. A standard (Geoservices) hydrocarbon total gas detector system together with a gas chromatograph for automatic and continuous gas analysis, recorded as ppm by volume of C1 through nC4, were operational below 1205 m down to the TD of the well.

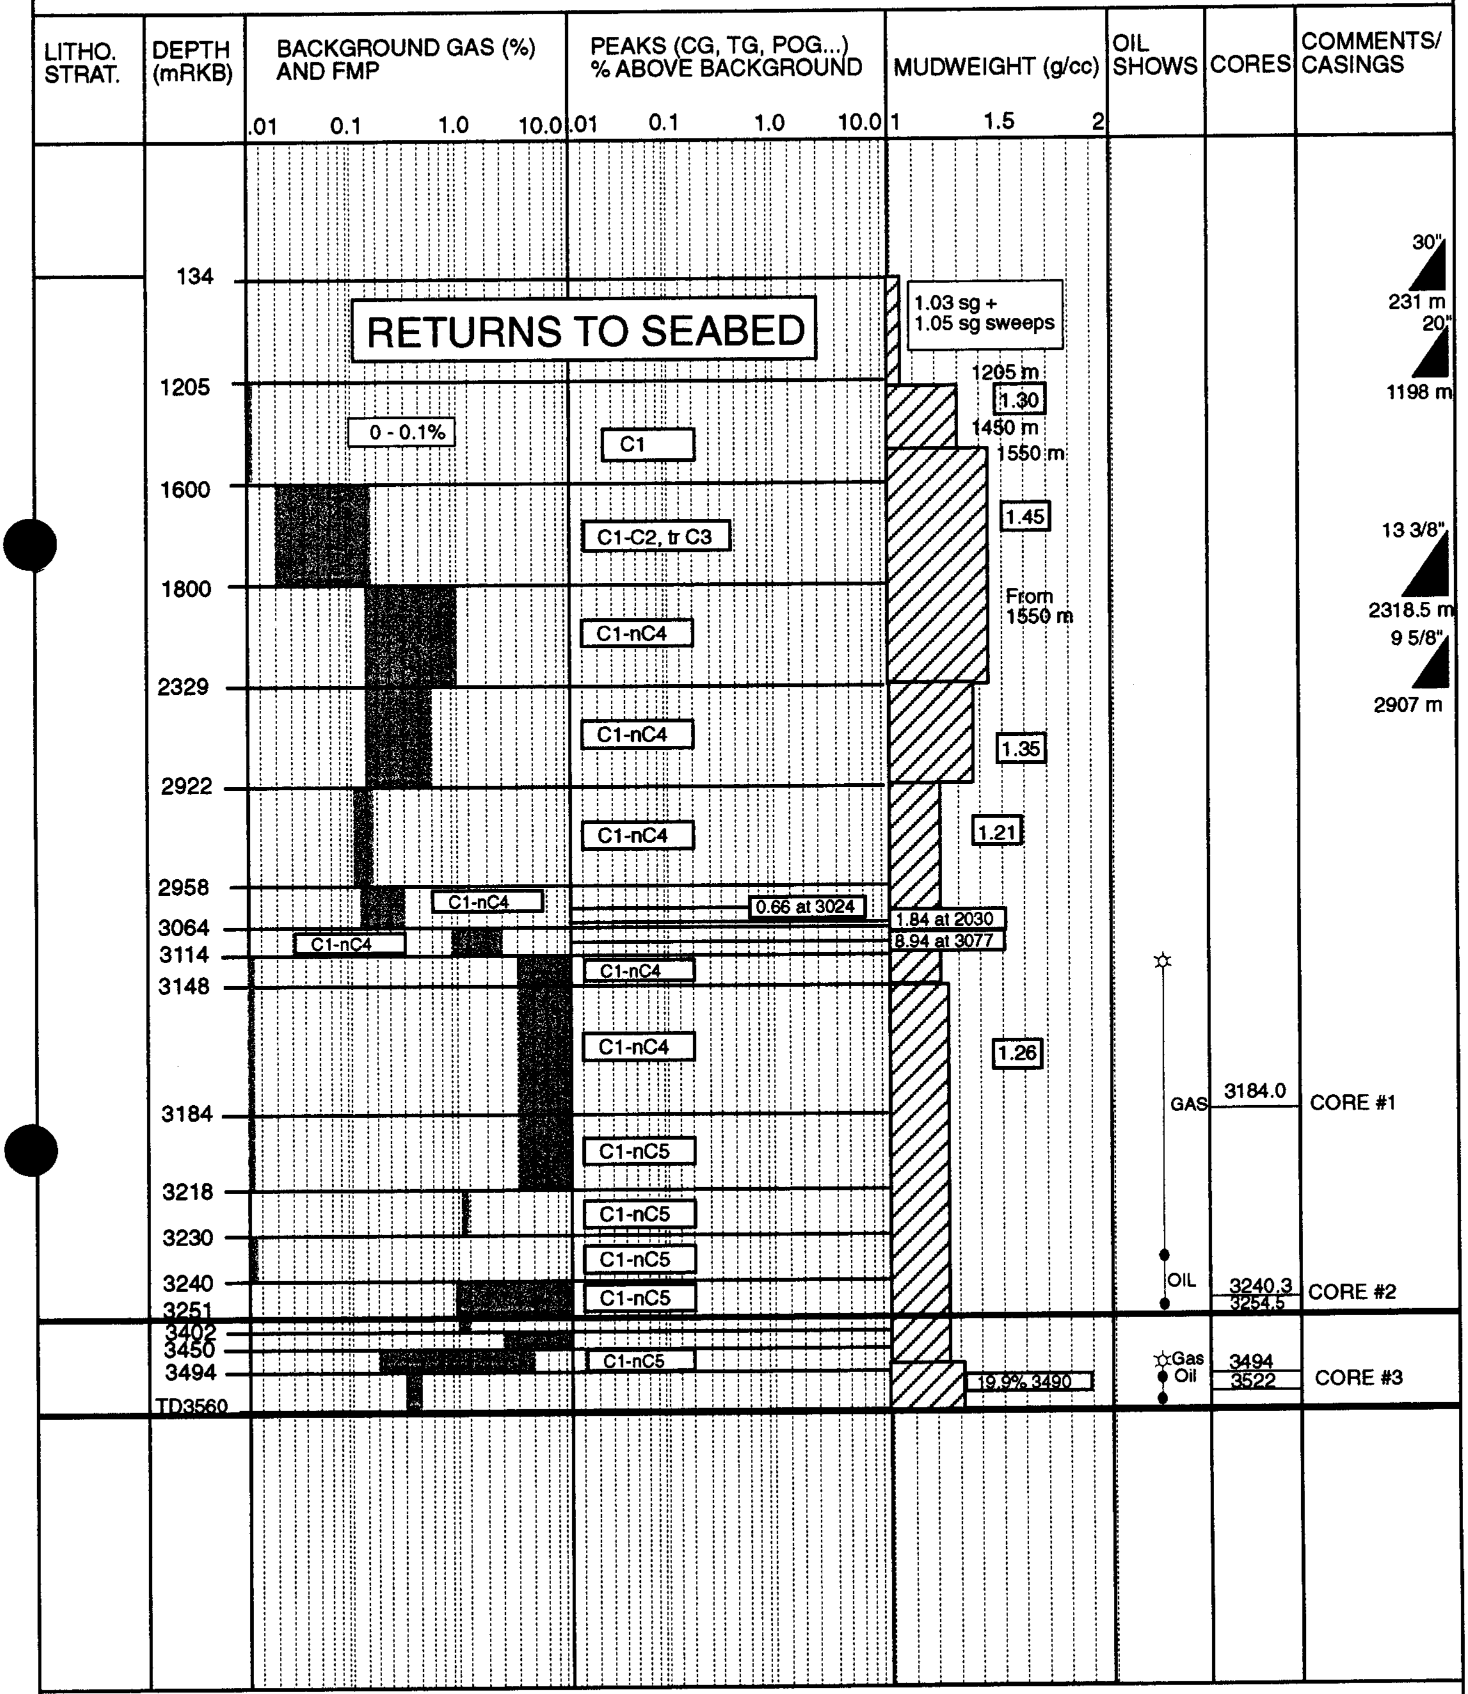
Hydrocarbon shows on ditch cuttings, cores and sidewall cores were evaluated according to procedures described in Norsk Hydro's "Wellsite Geologist's Manual".

5.1 Gas Record

134 - 1205m: This interval was drilled with returns to sea bed.

The gas summary for the well is presented in the Figure 5.1 on the next page.

GAS SUMMARY WELL: 30/9-19



NOTE: NOT TO SCALE

Fig. 5.1: Gas summary

CG=CONNECTION GAS, TG=TRIP GAS, WTG=WIPER TRIP GAS,
POG=PUMP OFF GAS, SWG=SWABBED GAS, FMP=FORMATION GAS PEAK

5.2 Oil stain and fluorescence

A summary of the observed shows is given in Table 5.1 below:

INTERVAL (mRKB)	SOURCE	LITHOLOGY	SHOWS DESCRIPTION
3087 - 3184	Cuttings	Siltstone and Sandstone	No direct fluorescence, slow streaming to blooming blue white to yellow fluorescent cut, no visible cut, no to trace yellow fluorescent residue, no to trace yellow visible residue.
3184 - 3217	Core	Siltstone and Sandstone	Weak to moderate petroleum odour, no to locally yellowish or dusky brown oil stain, no to local trace direct fluorescence, trace blue white to milky white fluorescent cut, no visible cut, no to local trace blue white fluorescent residue, no visible residue.
3232 - 3247	Core	Sandstone	Moderate petroleum odour, brown oil stain, fair uniform yellow direct fluorescence, instant blooming blue white fluorescent cut, no visible cut, moderate even blue white to green fluorescent residue, yellow visible residue.
3408 - 3450	Cuttings	Sandstone	On less than 5% of aggregates: bright yellow direct fluorescence, slow blooming to streaming yellow to yellow white fluorescent cut, no visible cut, yellow white fluorescent residue.
3486 - 3500	Cuttings/core	Sandstone	10-60% dull to bright yellow direct fluorescence, moderately fast blooming white to pale yellowish green fluorescent cut, white streaming fluorescent cut, no or rarely pale straw visible cut, white to cream fluorescent residue, no visible residue.

Table 5.1. Shows summary 30/9-19

6 CORING

6.1 Conventional cores

A total of 3 cores was cut at different intervals throughout the well. A summary of the cores is presented in the Tables 6.1 below and the core descriptions can be found in Appendix I.

No	C: Cut(m) R: Recovery(m)	Rec. %	Lithology	Formations
1	C:3184 - 3240.3 R:3184 - 3240.3	100	Sandstone	Tarbert 2/1
2	C:3240.3 - 3254.5 R:3240.3 - 3246.7	45,1	Sandstone	Tarbert 1
3	C:3494 - 3522 R:3494 - 3521.3	97,6	Sandstone, Claystone	ORE

Table 6.1: Conventional cores 30/9-19

6.2 Sidewall cores

Sidewall cores were taken from 2975 m to 3136.5 m. Details of recovery are given in Table 6.2 below.

Descriptions of the sidewall cores can be found in Appendix II, and gross lithology is reported on the Completion Log.

Run	Requested	Misfired	Lost	Empty	Recovered	Rec %
2A	30	-	3	-	27	86,7

Table 6.2: Sidewall cores

7 LOGGING

7.1 Wireline logs

The following table is a summary of wireline logs run in the well and shows log type, date run, logged intervals and run number for each log.

Logs	Date	Logged interval (mRKB)	Run
MDT/GR/ACST	8-12.10.98	3247-3247	1A
HALS/TLD/HGNS/GPIT/ACTS	8.10.98	3255-134	1A
FMI/NGT/DSI/ACTS	17-18.10.98	3556.5-2907	2A
HALS/TLD/HGNS/GPIT/ACTS	17.10.98	3556.5-3200	2B
CMR/GR	18-19.10.98	3515-3065	2A
MDT/GR/ACST	20-21.10.98	3029-3497	2B
VSP/GR	20.10.98	3198-2530	2A
VSP/GR	20.10.98	3520-3190	2B
CST/GR	21-22.10.98	3136.5-2975	2A

Table 7.1: Wireline logs 30/9-19

7.2 MWD logs

A MWD service (Anadrill) yielding gamma ray, resistivity and survey measurements was run in the following section:

134-233m	(survey only)
233-3560m	

Detailed MWD results can be found in the report "End of Well Report, MWD, for Norsk Hydro, Well 30/9-19."

7.3 Bottom hole temperatures from wireline logs

The table below gives a summary of the bottom hole temperatures measured from wireline logs.

Log suite	Run	Depth (mRKB)	Temp ° C	Time since circ. (hrs)	Circ. time (hrs)
MDT/GR/ACST	1A	3 247	98,1	9:55	6
HALS/TLD/HGNS/GPIT/ACTS	1A	3 253	98,1	9:55	6
FMI/NGT/DSI/ACTS	2A	3 556,5	-	-	4:35
HALS/TLD/HGNS/GPIT/ACTS	2B	3 556,5	126	12:50	4:35
CMR/GR	2A	3 515	-	-	4:35
MDT/GR/ACST	2B	3 029	122	39	3:30

Table 7.2: Bottom hole temperatures from logs

8 PETROPHYSICAL RESULTS

Petrophysics

The petrophysical evaluation is based on wireline log data, logging while drilling data, conventional core data and formation pressure data. The details in the petrophysical interpretation are described in "Well 30/9-19 and 30/9-19 A, Formation Evaluation Report (FER)".

Formation Pressure Data

Two MDT (Modular formation Dynamics Tester) runs covered the reservoir section of the well with a total attempt of 43 pressure points. Six pretests were tight and ten pressure points were believed to have a supercharged effect. Gas, oil and water, not in pressure communication are present in the 30/9-19 well. A gas down to is situated at depth 3216 m MD RKB, and the oil down to is set to 3247 m MD RKB. The Tarbert gas and the Ness water are evaluated from best fit quartz gauge which gave densities of respectively 0.25 g/cc and 0.99 g/cc. Based on preliminary results from the PVT analysis and MDT pressure points an oil density of 0.66 g/cc was interpreted. All zones are above hydrostatic pressure.

Petrophysical Zone Averages

The petrophysical interpretation is presented in figure 8.1. This CPI utilises high quality wireline data.

Zone Averages				
Zone	**Interval [m MD RKB]**	**Net Pay [m MD]**	**Porosity [%]**	**Water Saturation [%]**
Draupne	3087-3092.5	0	-	-
Tarbert 4	3092.5-3113	0	-	-
Tarbert 3	3113-3138	1,1	9,8	53,2
Tarbert 2eu-g	3138-3164.5	25,2	19,5	14,6
Tarbert em	3164.5-3165.5	0	-	-
Tarbert 2el	3165.5-3184.5	18	17,8	18,7
Tarbert 2d	3184.5-3191	0,3	10,2	62,5
Tarbert 2c	3191-3216	23,5	18,8	20,3
Tarbert 2a	3216-3238	5,2	15,6	53,1
Tarbert 1b	3238-3245.5	7	15,9	37,3
Tarbert 1a	3245.5-3264.5	2	14,9	46
Ness	3264.5-3484.5	3,8	17,3	84,2
Etive	3484.5-3490	5,2	17,9	39,9
Rannoch-Oseberg	3490-3510	0	12,6	70,6

Table 8.1: Petrophysical zone averages for the 30/9-19 net reservoir

Three core were cut in the 30/9-19 well in the Tarbert and Rannoch-Oseberg Formations. The porosity is overburden with a factor of 0.97. The match between the calculated total porosity and overburden corrected porosity is good and the core measurements is considered to have a high quality.

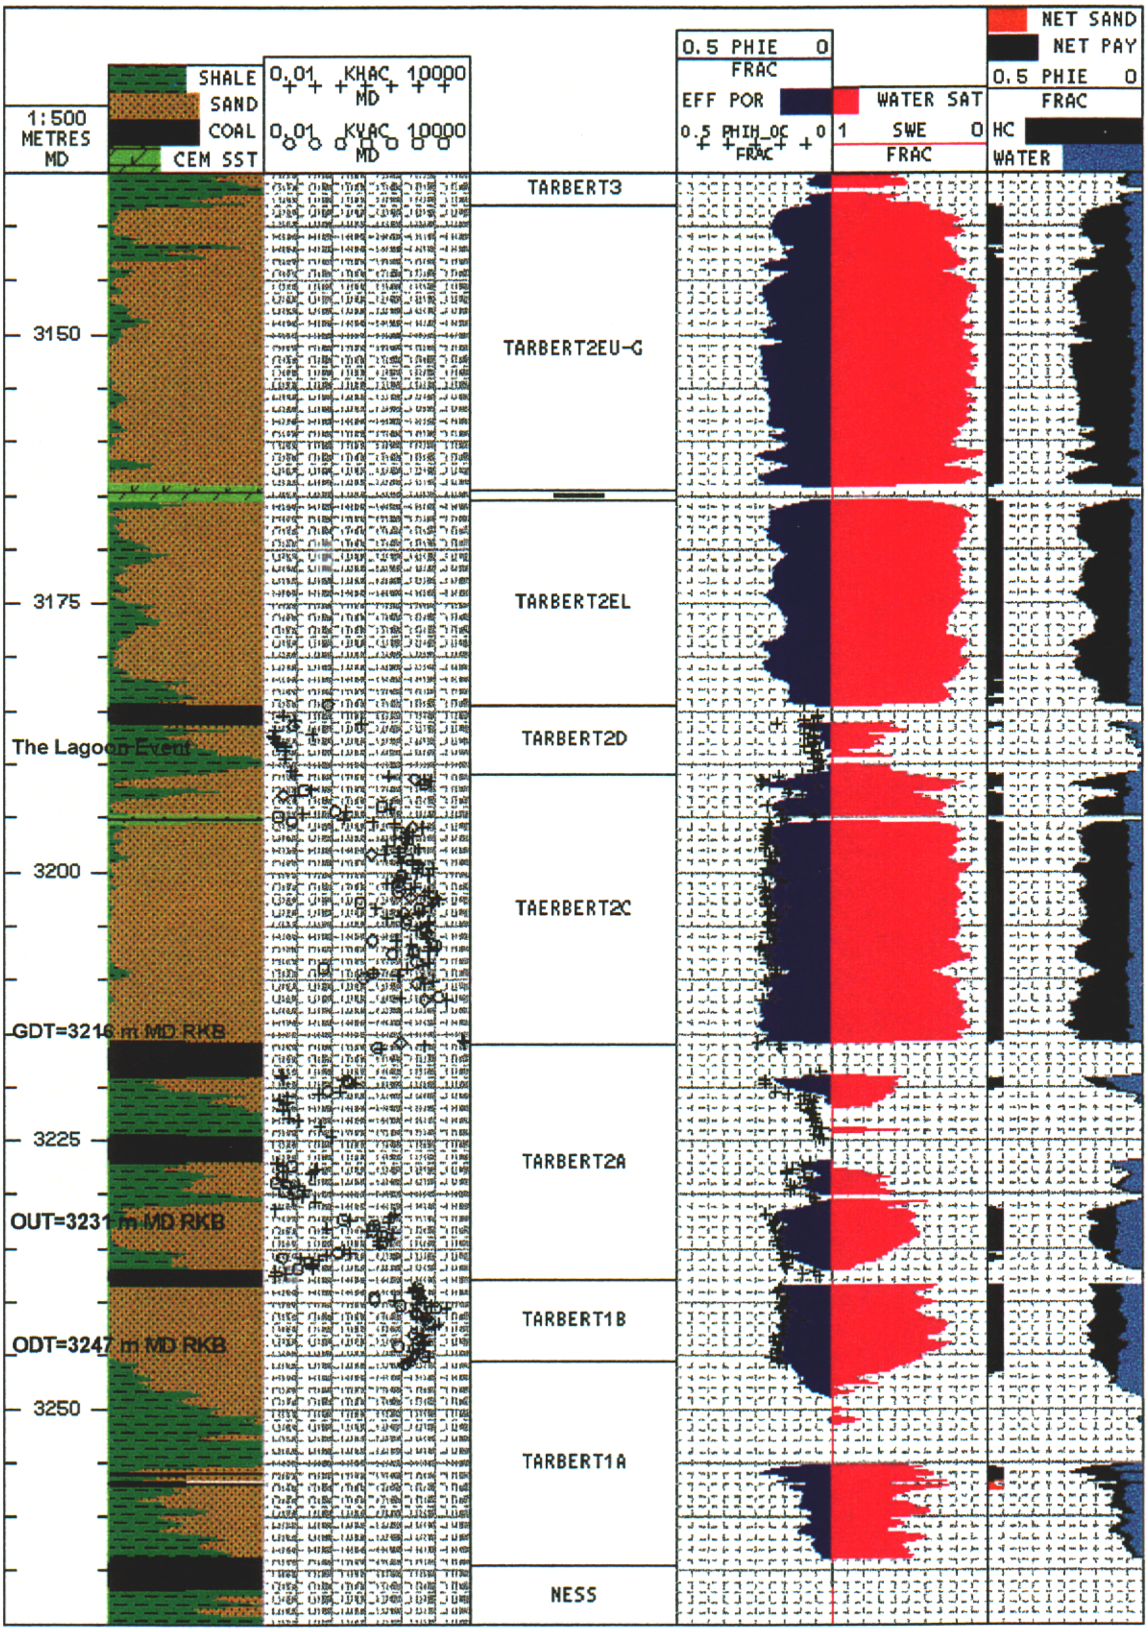


Figure 8.1: The petrophysical interpretation from the Tarbert Formation

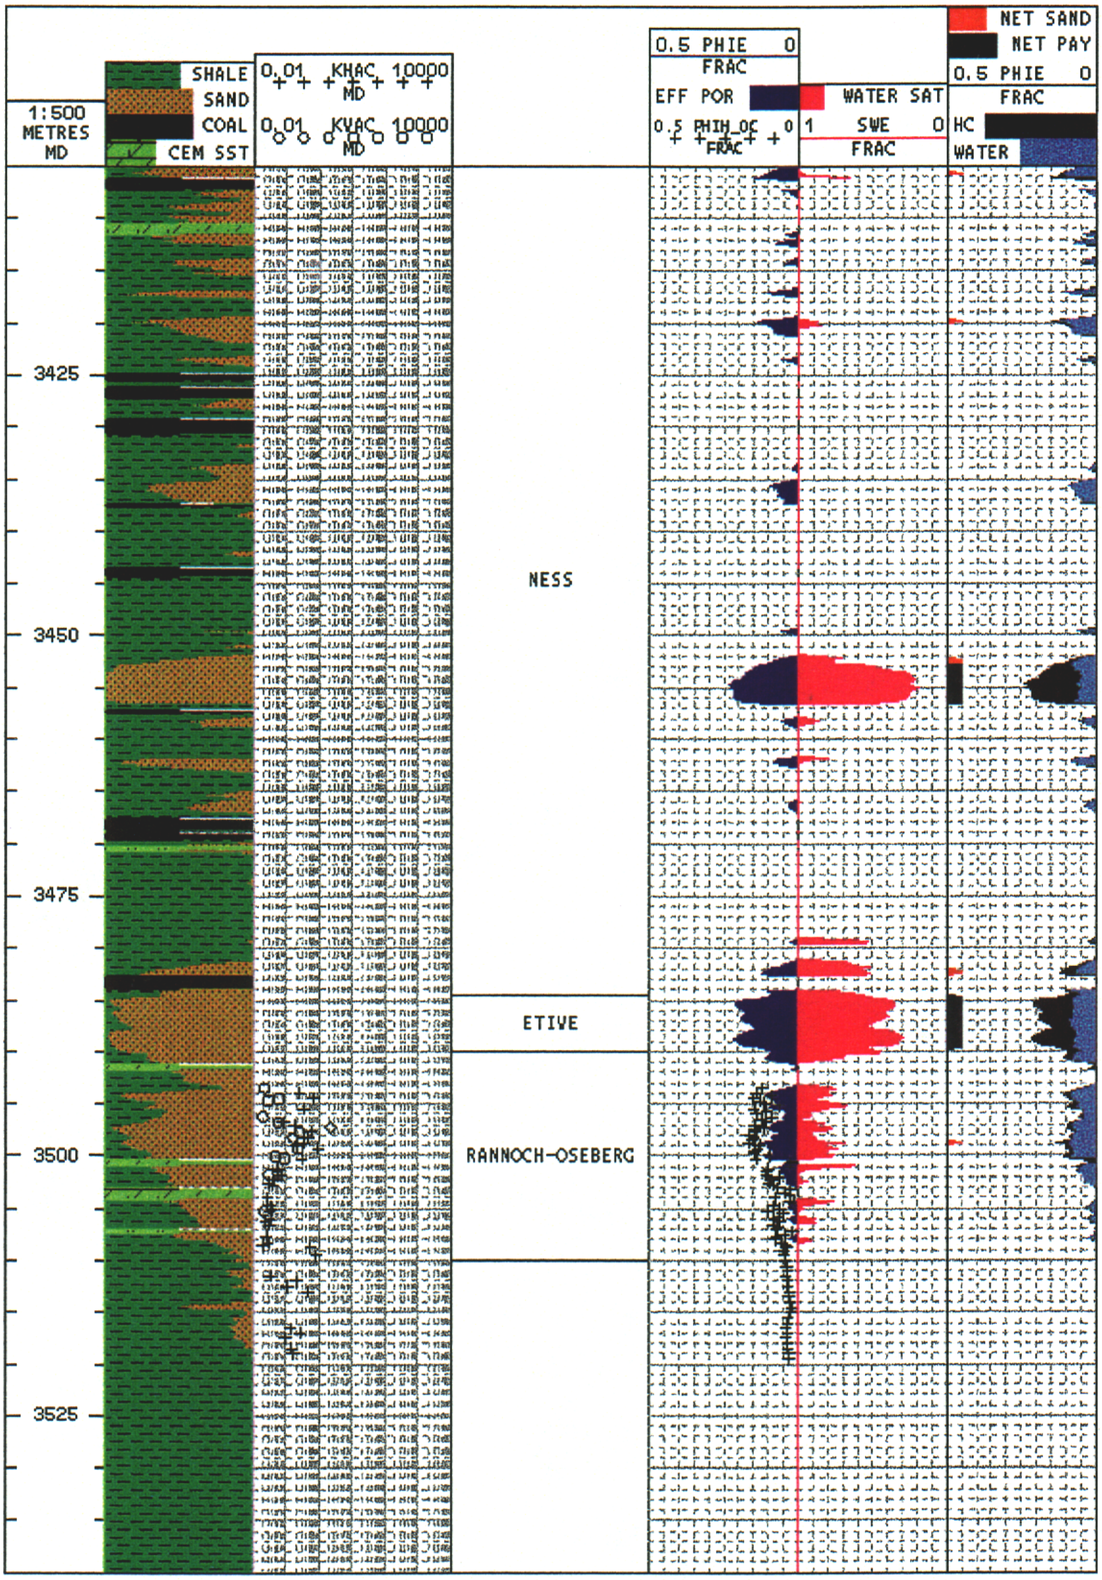

Figure 8.2: The petrophysical interpretation from the Ness and ORE Formations

8.3 Estimated Pore Pressure, Fracture, Overburden and Temperature Gradients

Pore pressure

The pore pressure in well 30/9-19 are based on MWD resistivity log, MDT pressure readings, and DXC.
It is very difficult to calculate pore pressure in Hordaland Group when drilling with high overbalance and PDC bit. Lithological variations makes it difficult to estimate pore pressure decrease in Rogaland Gp and pressure development over the boundary to Shetland Gp.

No shallow gas occurs in the upper sediments. Down to 1700m the pore pressure is normal and increase rapidly to max pore pressure 1,32 +/- 0,05 sg. The pore pressure stays constant down to top Rogaland and is evaluated to decrease to 1.10 sg at the top of Shetland Gp. The pore pressure follows a 1.10 sg trend down to a sandstone interval between 3072 - 3075 mTVD. The pore pressure is measured with MDT to 1,14 sg Results from MDT measurement, in the Brent Gp, shows that the pressure in Tarbert 3 is 1.11 sg and decreasing to 1,07 in Tarbert 1. The gas, down to Tarbert 2C, has a gradient of 0,025 bar/m. The oil gradient in Tarbert 2A and Tarbert 1 is 0,065 bar/m. An isolated sandbody in Tarbert 1, at 3255 mTVD, has a pore pressure of 1, 22 sg. The pore pressure in Ness formation increases from 1.10 sg to1,22 sg. The pore pressure in ORE formation is measured to 1,26 sg.There are no indications of pressure alteration in Dunlin Gp. down to TD.

Formation strength

Leak off tests was performed to 1,62 sg @ 1208m, 1,70 sg @ 2332m and 1,81 sg @2924,5m. Breckels & van Eekelen formula for fracture gradient indicate lower value in Hordaland and Shetland than LOT.
There was no hole problem in the well during drilling.

Overburden gradient

Overburden Gradient is taken from prognosis in Drilling program due to absence of density log above reservoar.

Temperature Gradient

Bottom hole static temperature is taken from DST in well 30/9-19A and measured to 121 deg C from the perforated interval 3242 - 3258 mTVD. The temperaure at TD, 3560m TVDKB, was estimated to 133 deg C with a gradient of 3,73 deg/100m.

Formation Temperature Gradient

9 GEOPHYSICAL RESULTS

In the prognosis a seismic event interpreted to represent the base of Tarbert 2 Fm. A static shift of +8 ms was found between the seismic picks and the well.

The prognosed depths were encountered within the given uncertainties except for the Top Grid sand. However, top Grid in the well is not associated with any seismic event and is therefore difficult to pick. The results are presented in Figure 9.1 and Table 9.1.

The Draupne Fm. was overlain by an unexpected allochtonous Ness block which together with the static shift caused the base Cretaceous to be picked 28 ms too shallow (ca. 47 m), on the top of this block. However, a slightly lower velocity from MSL to base Cretaceous than prognosed (0,6 % = 26 m) reduced the error giving an observed error of +21 m in the well relative to the prognosis (47 m - 26 m = 21 m).

In the prognosis a seismic event interpreted to represent the base of Tarbert 2 Fm. sand was picked, and the formations between this and base Cretaceous was prognosed based on a geological model.

The base Tarbert 2 Fm. sand was encountered 25 m shallower than prognosed which is mainly caused by a shallower velocity down to base Cretaceous than prognosed.

The top Tarbert 2 Fm. reservoir was encountered 22 m shallower than prognosed due to a 3 m thinner T2 sand than the geomodel.

Top Tarbert 3 Fm. was encountered 15 m shallower due to a 7 m thinner T3 Fm. than the geomodel.

Top Tarbert 4 Fm. was encountered 18 m deeper due to a 33 m thinner T4 Fm. than prognosed.

The Draupne Fm. was encountered 21 m deeper due to a 3 m thinner Draupne Fm. than prognosed.

The Top Ness Gp. was encountered 30 m shallower than the prognosis. Top Ness was modelled down from the picked base Tarbert 2 reservoir and came in 5 m shallower than the geomodel.

Top ORE Fms. was encountered 63 m shallower than prognosed. This is mainly due to a too shallow seismic pick.

Top Dunlin Gp. was encountered 77 m too shallow, also because of a too shallow seismic pick.

10 POST SITE SURVEY REPORT

WELL DATA :

1 **Distance from rig floor to sea level:** 29 m

2 **Water depth (MSL):** 105 m

3a **Setting depth for conductor (m RKB):** 231 m

3b **Leak Off / Formation Integrity Test (g/cc):** N/A

4a **Setting depth (m RKB TVD) for casing on which BOP mounted:** 1198 m

4b **Formation Integrity Test (g/cc):** 1.62 sg (LOT)

5 **Depth (m RKB (TVD) & Two Way Time) to formation/section/layer tops:**

Seabed : 134.0 m (141 ms)
Base Pleistocene : 311.0 m (327 ms)
Intra Pliocene Anomaly 1 (IPAN1) : 339.5 m (357 ms)
Intra Pliocene Anomaly 2 (IPAN2) : 404.5 m (427 ms)
Intra Pliocene Anomaly 3 (IPAN3) : 501.5 m (522 ms)
Top Early Pliocene Sand (IP3) : 586.5 m (606 ms)
Base Early Pliocene Sand (IP3) : 623.0 m (627 ms)
Top Usira Sand : 644.5 m (642 ms)
Base Usira Sand : 933 m (946 ms)
Top Skade : 977.5 m (980 ms)
Base Skade : 998.5 m (995 ms)
Top Intra Hordaland Sand : 1070 m (c. 1060 ms)
Base Intra Hordaland Sand : 1125 m (c. 1125 ms)
Top Grid Sand : 1257 m (c. 1267 ms)

Note:

No chronostratigraphic information was collected in the tophole section of the well (from seabed down to 1205 m RKB TVD). Consequently, the interpretation of the different formations in this area is based on the MWD logs, seismic character and previous work.

Mud logging commenced at 1205 m. Samples for description were taken at 10 m intervals to 2950 m RKB TVD except for the interval between 2000 m and 2450 m RKB TVD where samples were taken every fifth meter. All formation tops are based upon MWD logs and cuttings analysis.

6 Depth interval (m RKB (TVD) & Two Way Time) and age of sand bodies shallower than 1000 m under the seabed. Note which layers if any contain gas:

No data exists on background gas levels from seabed down to 1205 m (section drilled with returns to seabed). However, no gas-related incidents were reported over this interval.

Several sand bodies have been identified in well 30/9-19:

Pleistocene Interval:

134 m - 217 m
289.5 m - 292 m

Pliocene Interval:

339 m - 340 m
379.5 m - 380.5 m
477 m - 478 m
586.5 m - 623 m

Lower Miocene Interval (Utsira Fm):

644.5 m - 933 m

Oligocene Interval:

954 m - 955 m
967.5 m - 968.5 m
971 m - 973.5 m
977.5 m - 998.5 m
1040 m - 1041 m
1042.5 m - 1044.5 m
1052.5 m - 1055.5 m
1070 m - 1125 m

7 By what means is the presence of gas proven:

An 8 1/2" pilot hole was run from 233 m down to 1202 m to obtain good log quality in response to potential shallow gas between 338 m (IPAN1) and 508 m (IPAN3). No firm clear log indications of shallow gas were recorded, but minor increase in the resistivity response and decrease in the gamma response have been observed at 379.5-380.5 m, 471-474 m, and 477-478 m RKB TVD (see Post Site Survey Log).

Gass bubbles were observed at seabed when circulating 'bottums up' after the drill break at 413 m RKB TVD. The gas origo is uncertain, but may have been air bubbles created when circulating the Hi-Vis pill.

Below 1205 m RKB TVD gas analyses were accomplished using flame ionisation detectors (FID) with gas measured as percentage methane (C1) equivalent in air, and chromatographic analyses expressed in parts per million.

8 **Composition and origin of gas:** Methane (C_1)

9 **Describe all measurements taken in gas bearing layers:** N/A

Chromatographic Breakdown of background Gas:

Depth m RKB MD	Background %	Composition
1205-1610	0-0.01	C_1
1610-1800	0.03-0.25	C_1-C_2 to C_3

SEISMIC DATA:

10 **Given depth (m RKB & ms TWT) and extent of sand layers (communication, continuity, truncation etc.):**

Pleistocene Interval:

134 m - 217 m:	Laterally extensive channel sand covering the eastern part of block 30/8 and western part of blocks 30/6 and 30/9.
289.5 m - 292 m:	Thin sand found within well stratified unit near Base Pleistocene. The sand unit extends across entire survey area and a similar sand layer was recorded in the 30/8-3 tie well. The sand is thought to have good continuity.

Pliocene Interval:

339 m - 340 m	
379.5 m - 380.5 m	
477 m - 478 m	
586.5 m - 623 m	Laterally extensive sand layer

Lower Miocene Interval (Utsira Fm):

644.5 m - 933 m	Laterally extensive sand layer

Oligocene Interval:

954 m - 955 m	
967.5 m - 968.5 m	
971 m - 973.5 m	
977.5 m - 998.5 m	Laterally extensive sand layer
1040 m - 1041 m	
1042.5 m - 1044.5 m	
1052.5 m - 1055.5 m	
1070 m - 1125 m	

11 **Given depth and extent of any gas blanking ("gass-skygging"), seismic anomalies etc.:**

Amplitude anomalies indicative of shallow gas were mapped at three levels in the area of well 30/9-19:

IPAN1: 338 m ± 20 m RKB TVD, no anomaly segments close to the well location.
IPAN2: 406 m ± 30 m RKB TVD, minor segment approximately 10 m south-east of the well location.
IPAN3: 508 m ± 36 m RKB TVD, 200 m south-west of the well location

Based on experience from wells 30/8-3, 30/5-2 and 30/9-2 wek gas warnings were given for the three levels at the planned well 30/9-19 location.

Due to shallow gas warning a 8 1/2" pilot hole was drilled to 1202 m. The tophole section of the well was drilled with returns to seabed to 1205 m RKB TVD. Background gas levels were consequently not monitored. No firm clear log indications of shallow gas were recorded.

12 Note any indication of gas originating from deeper levels. Give description in cases where gas comes from deeper layers: N/A

13 How does the interpretation of the site survey correspond to the well data with respect to:

13a Shallow Gas:

Due to shallow gas warning, a 8 1/2" pilot hole was drilled from 233 m down to 1202 m. The tophole section of the well was drilled with returns to seabed to 1205 m RKB TVD. Background gas levels were consequently not monitored. No firm clear log indications of shallow gas were recorded, but minor increase in the resistivity response and decrease in the gamma response have been observed at 379.5-380.5 m, 471-474 m, and 477-478 m RKB TVD (see Post Site Survey Log).

Gass bubbles were observed at seabed when circulating 'bottums up' after the drill brake at 413 m RKB TVD. The gas origo is uncertain, but may have been air bubbles created when circulating the Hi-Vis pill.

No gas-related problems were experienced in the well.

13b Sand Bodies:

The Pleistocene sand layers were predicted, but the deepest layer (289.5 m - 292 m) was not annotated with exact depth. The encountered sand layers correspond with the interpretation.

One of the three predicted thin sand layers (IPAN1) in the Pliocene section were observed. The predicted sand layer at IPAN3 represents most likely a silty mud/mudstone. The thick Early Pliocene sand layer at 586.5 m to 623 m appeared 13.5 m thicker than predicted.

The Utsira Sand occurred as predicted but due to the seismic pick and correlation to tie-well 30/6-18, the Top Utsira Sand is placed 7.5 m deeper and the Base Utsira Sand is placed 8 m shallower than indicated in the Formation Tops prognoses. The upper part of the Utsira Sand is interpreted as being a transitional zone which grades into silt and clay as the overlaying sequence is approached.

The sandy Skade Formation occurred as predicted, but the formation appeared 6 m thicker than predicted. The reason for this is probably wrong seismic picks of the formation boundaries.

The sand layer in Oligocene at 1070 m to 1125 m was not predicted.

13c Boulders:

Scattered boulders were predicted in the shallow section between approximately 223 m and 282 m RKB TVD. No boulder layers were observed in the predicted interval, but boulders were encountered between 217 m and 231 m RKB TVD.

13d Unconformities (depths in metres RKB (TVD)) :

Horizon		Prognosed	Observed	Difference
Seabed	:	134 ± 1	134	0
Base Pleistocene	:	309 ± 17	311	2 (deeper)
Top Early Pliocene Sand	:	598 ± 38	586.5	11.5 (shallower)
Base Early Pliocene Sand	:	621 ± 39	623	2 (deeper)
Base Pliocene	:	637 ± 40	644.5	7.5 (deeper)
Base Utsira	:	941 ± 50	933	8 (shallower)
Top Skade	:	980 ± 53	977.5	2.5 (shallower)
Base Skade	:	995 ± 61	998.5	3.5 (deeper)
Top Intra Hordaland s.	:	1284 ± 69	1070	214 (shallower)
Base Intra Hordaland s.	:	1338 ± 75	1125	213 (shallower)
Top Grid	:	1412 ± 90	1257	155 (shallower)

The differences between the prognosed and observed depths to different formation tops were within the uncertainty limits, except for Top/Base Intra Hordaland Sand and Top Grid Fm. The difference between the predicted and observed depths are most likely due to wrong seismic picks. The seismic interpretation work in this area is very much hampered by diapirs that occur in the Oligocene section.

13e Correlation to Nearby Wells:

In general, the drilling conditions experienced in well 30/9-19 are as predicted and similar to those encountered in tie-wells 30/8-3 and 30/9-2.

LIST OF CONTENTS

TABLES

FIGURES

1 DRILLING SUMMARY AND EXPERIENCES

1.1 Mobilising

Total time used:	185.0 hrs
Operational time:	79.5 hrs (43.0 %)
Downtime:	105.5 hrs (57.0 %)

For a detailed breakdown, see report 1-3.

Wellhead co-ordinates:

6702819.9 mN	483176.9 mE

The rig heading was 298°.

1.2 36" Hole Section / 30" Conductor

Total depth of section: 231 mMD.

Total time used:	36.5 hrs .
Operational time:	30.5 hrs (83.6 %)
Downtime:	6.0 hrs (16.4 %)

For a detailed breakdown, see report 3-6.

1.2.1 Drilling

The well was spudded at 11 am September 8, 1998.

The 36" hole was drilled with sea water from 134 mMD to 231 mMD. A six armed heavy duty hole opener with a 17 1/2" insert bit was used.

Boulders were registered between 217 and 231 mMD. A wiper trip was performed to TD and the hole was partially displaced to 1.50 sg mud.

1.2.2 Casing

The 30" casing was run with a PGB and cemented back to the sea floor. The casing was grouted after running the 20" casing.

1.3 9 7/8" x 26" Hole Section / 20" Casing

Total depth of section: 1198 mMD.

Total time used:	213.5 hrs
Operational time:	187.5 hrs (87.8 %)
Downtime:	26.0 hrs (12.2 %)

For a detailed breakdown, see report 6-14.

1.3.1 Drilling

Due to a shallow gas warning, a 9 5/8" pilot hole was drilled and then opened to 26". In both cases an insert bit was chosen. No gas was encountered.

The section was drilled with sea water and viscous pills.

A wiper trip to TD was performed and the hole was displaced to 1.20 sg mud prior to running the 20" casing.

1.3.2 Casing

The casing had to be worked through tight spots from 265 to 279 mMD. A maximum weight of 45 tons was applied to the casing.

The casing was cemented according to the programme, but the plug did not bump even after over displacing with 1/2 shoe track.

1.4 17 1/2" Hole Section / 13 3/8" Casing

Total depth of section:	2318.5 mMD.
Total time used:	164.0 hrs
Operational time:	159.5 hrs (97.3 %)
Downtime:	4.5 hrs (2.7 %)

For a detailed breakdown, see report 14-21.

1.4.1 Drilling

Ran BOP prior to drilling this section. One guide wire was loosened, so the BOP was landed with three wires.

An LOT was performed to 1.62 sg EMW after having drilled out the cement and three meters of new formation.

An insert bit was used throughout the section. The mud weight at the start of the section was 1.3 sg, but pore pressure calculations showed that it was necessary to increase this to 1.45 sg at 1550 mMD.

The ROP decreased drastically in the Lista formation, and it was decided not to drill to the planned casing depth at 2450 mMD.

No wiper trip was performed.

1.4.2 Casing

The casing was run and cemented according to the program.

When pressure testing the casing, the pressure dropped off after reaching 245 bars. A wash out was later discovered in the landing string. The casing was pressure tested again when running in hole with the 12 1/4" drilling assembly.

1.5 12 1/4" Hole Section / 9 5/8" Casing

Total depth of section: 2907.4 mMD.

Total time used:	195.0 hrs
Operational time:	143.5 hrs (73.6 %)
Downtime:	51.5 hrs (26.4 %)

For a detailed breakdown, see report 21-26.

1.5.1 Drilling

The BOP was pressure tested to 455 bar prior to start of drilling.

The section was drilled with 1.35 sg KCl mud.

An LOT to 1.70 sg EMW was performed after drilling out the shoe and three meters new formation.

The drilling was stopped at 2922.5 mMD due to steering problems caused by the angle of the formation layers and an agressive bit. It was impossible to orient the tool face and further drilling in the same direction would have resulted in missing the first target. Planned TD of section was 3090 mMD.

1.5.2 Logging

Due to a shorter section, the planned logging was not performed.

1.5.3 Casing

The casing was run according to program.

The cement was not displaced properly due to a wash out in the 5" U-170 drill pipe used as landing string. The wash out was discovered when pulling the landing string. This wash out was probably what had caused problems during the pressure test of the previous casing. Wet cement was cleaned out of the BOP area using a jet sub. A milled tooth bit was run to drill out the cement inside the casing. Cement was tagged at 2567 mMD. No cement was found below the float collar. A cement stinger consisting of 3 1/2" drill pipe was run and a balanced cement plug was sat and squeezed into the annular space. The cement was held back with 97 bar pressure for 9 hrs.

1.6 8 1/2" Hole Section

Total depth of section: 3560 mMD.

Total time used:	437.5 hrs
Operational time:	301.0 hrs (68.8 %)
Downtime:	136.5 hrs (31.2 %)

For a detailed breakdown, see report 26-47

1.6.1 Drilling

An LOT to 1.81 sg EMW was performed after having drilled the shoe track and three meters of new formation.

An insert bit was used to drill down to the first coring point. The direction of the well was changed to make sure target would be hit, thus most of this section was drilled in steering mode. The first coring point was recognised at 3184 mMD.

After having cored from 3184 to 3255 m, a PDC bit was used to drill to the second coring point at Top Ness. The bit was pulled at 3450 mMD, when a gross error in an LWD correction factor made the geologists believe that Top Ness had been found. The error was discovered when the coring assembly was being made up, and the bit was run in hole again for further drilling. Drilling was stopped at 3494 mMD.

After the second coring, from 3494 to 3522.5 m, the same PDC bit was rerun to drill a rat hole for the logging suites. The drilling was stopped at 3637 mMD which is the TD of 30/9-19.

1.6.2 Coring

A total of three cores where cut in 30/9-19

Run #	Cored interval [mMD]	ROP [m/h]	Recovery [%]	Reason pulled
1	3184.0 - 3238.5	45.8	100	Full barrel
2	3238.5 - 3255.0	3.4	45.1	Core jammed
3	3494.0 - 3522.5	28	97.5	Core jammed

The first two coring runs where performed in the Tarbert 2 sand. The third was performed in the ORE formation.

CST side wall coring was performed on wireline in the two reservoir sections. Thirty shots were fired, and the recovery was 86.7 %.

1.6.3 Logging

The following logs were run:

Log suite	Logged interval [mMD]	Comments
PEX	2907.0 - 3254.0	Run after coring T2
MDT	Tarbert 2 Form.	Stuck. Freed w/ overshot
PEX	2907.0 - 3560.0	
FMI, NGT, DSI, AMS	2907.0 - 3560.0	Computer failure
FMI, NGT, DSI, AMS	2907.0 - 3560.0	Rerun due to comp. failure
CMR, GR	2907.0 - 3560.0	
VSP, GR	3560.0 - 2907.0	One geophone
MDT	Reservoir sections	Samples and press. points
CST	Reservoir sections	30 shots, 86.7 % recovery

The PEX logging suite consisted of HALS, TDL, HGNS, GPIT and AMS.

The first MDT logging suite got stuck when sampling. An over shot was stripped in hole, and the tool was worked free. A torpedo connection was installed before logging was continued. Samples were taken at 3244, 3234 and 3233 m, pressure points were taken between 3196 and 3215 mMD.

When running in with the VSP suite, the tool hung up due to uncontrolled opening of spring loaded centralising arms. Three of the four geophones where laid out, and the suite was rerun with one geophone.

1.7 Plug and Abandonment

Total time used:	51.0 hrs
Operational time:	50.5 hrs (98.1 %)
Downtime:	0.5 hrs (1.9 %)

For a detailed breakdown, see report 47-55

The open hole was plugged back in three stages from 3560 and into the 9 5/8" casing at 2834 mMD. The plug was tagged with 10 mT and pressure tested to 212 bars.

The 9 5/8" casing of 30/9-19 was cut at 2372 mMD and pulled, resulting in a 50 m window below the 13 3/8" casing shoe.

A kick off plug was set from 2468 to 2240 mMD.

Downtime report, 3[illegible]-19

Well	Rep	#	Hrs	Date	Downtime Type	Short Description	Responsible Contractor	Nsfi Type	Equipment Type	Service Type
30/9-19	1.		14.0	1998-09-08	Equipment failure	Smedvig work on emergency-controlsystem for th ballastpumps according to DNV regulations	SMEDVIG OFFSHORE A/S	Other Service Equipment/System	SERVICE EQUIPMENT/SYSTEMS	RIG UTILITIES
	2.		6.0	1998-09-10	Waiting for cement to cur	Waited on cement.	TO BE NAMED			
	3.		23.0	1998-09-10	Equipment failure	Rig operations stopped due to bearing failure in th drawwork's brake.	SMEDVIG OFFSHORE A/S	Drawworks and Machinery	DRILL FLOOR EQUIPMENT/SYSTEMS	DRILLING CONTRACTOR
	4.		1.0	1998-09-12	Equipment failure	Geoservices unit shut down due to door left open.	GEOSERVICES	Miscellaneous equipment, systems and servic	MISCELLANEOUS EQUIPMENT/SYSTEM/SERVICE	MUD LOGGING
	5.		0.5	1998-09-14	Equipment failure	Replaced leaking hydraulic hose in HPU-unit	SMEDVIG OFFSHORE A/S	Other Drill Floor Eq./Syst.	DRILL FLOOR EQUIPMENT/SYSTEMS	DRILLING CONTRACTOR
	6.		1.5	1998-09-15	Equipment failure	Changed dies in TDS torque wrendh and 4 1/2" IF savor sub.	SMEDVIG OFFSHORE A/S	Other Pipe Handling Equipment	PIPE HANDLING EQUIPMENT/SYSTEM	DRILLING CONTRACTOR
	7.		0.5	1998-09-20	Equipment failure	Trouble shoot seawater supply to mud pumps.	SMEDVIG OFFSHORE A/S	Mud Supply(incl. HP mudpumps)	MUD AND BULK SYSTEMS	RIG UTILITIES
	8.		4.0	1998-09-22	Equipment failure	Rig power failure in the main panel.	SMEDVIG OFFSHORE A/S	Rig Power Supply	MISCELLANEOUS EQUIPMENT/SYSTEM/SERVICE	RIG UTILITIES
	9.		0.5	1998-09-30	Equipment failure	Repaired draw-work brake.	SMEDVIG DRILLING A/S	Drawworks and Machinery	DRILL FLOOR EQUIPMENT/SYSTEMS	DRILLING CONTRACTOR
	11.		2.5	1998-10-01	Equipment failure	Unable to set 9 5/8" wear bushing.	DRIL-QUIP	Wellhead	SERVICE EQUIPMENT/SYSTEMS	WELLHEAD
	12.		3.5	1998-10-01	Equipment failure	Attempted to function test upper pipe ram on accoustic system. Ram wouldnt open.	SMEDVIG OFFSHORE A/S	BOP Stack	WELLCONTROL EQUIPMENT/SYSTEM	DRILLING CONTRACTOR
	13.		52.0	1998-10-02	Other	Drilled cement from 2567 m to 2859 m.	NORSK HYDRO A/S			
	14.		0.5	1998-10-04	Equipment failure	Repaired cooling water leak in draw-work.	SMEDVIG DRILLING A/S	Drawworks and Machinery	DRILL FLOOR EQUIPMENT/SYSTEMS	DRILLING CONTRACTOR
	15.		2.0	1998-10-07	Equipment failure	Repaired drilling line anchor on draw-work.	SMEDVIG DRILLING A/S	Drawworks and Machinery	DRILL FLOOR EQUIPMENT/SYSTEMS	DRILLING CONTRACTOR
	16.		2.0	1998-10-08	Equipment failure	Replaced broken compensator wire, snatch block and T-bar.	SMEDVIG DRILLING A/S	Electric Logging Eq. in General	SERVICE EQUIPMENT/SYSTEMS	DRILLING CONTRACTOR
	17.		85.0	1998-10-08	Other	Fishing of Schlumberger MDT logging tools.	NORSK HYDRO A/S			
	18.		0.5	1998-10-12	Equipment failure	Replaced the faulty lucifer valve on drawwork brak	SMEDVIG OFFSHORE A/S	Drawworks and Machinery	DRILL FLOOR EQUIPMENT/SYSTEMS	DRILLING CONTRACTOR
	19.		26.0	1998-10-13	Other	Flowchecked and pulled out to 2896 m.	ANADRILL			
	20.		1.0	1998-10-17	Equipment failure	Replaced broken shear-pin on upper racking arm	SMEDVIG DRILLING A/S	Vertical Pipe Handling	PIPE HANDLING EQUIPMENT/SYSTEM	RIG UTILITIES
	21.		3.5	1998-10-17	Equipment failure	Computer problems let to loss of FMI calibrations.	SCHLUMBERGER NORGE	Surface data aquisition	SERVICE EQUIPMENT/SYSTEMS	ELECTRIC LOGGING
	22.		2.5	1998-10-19	Equipment failure	Repaired broken 1" hydraulic supply hose connect to Topdrive	SMEDVIG DRILLING A/S	Top Drive	HOISTING EQUIPMENT	RIG UTILITIES
	23.		3.5	1998-10-20	Equipment failure	Pulled out of hole with suite # 4 due to a poor connection in connectorhead	SCHLUMBERGER NORGE	Other Drilling/Downhole Equipment	DRILLSTRING/DOWNHOLE EQUIPMENT	ELECTRIC LOGGING
	24.		3.0	1998-10-20	Other	Laid down 3 satelite geofons from the VSP tool.	READ WELL SERVICE A/S			
	25.		9.0	1998-12-17	Waiting on weather	Waiting on weather to pull anchors.				
	32.		82.5	1998-12-18	Waiting on weather	Waited on boat to start anchor handling.				

Daily report no : 1 **Date:** 1998-09-06
Midnight depth : 0 m MD **Estimated PP:** sg **Mud weight:** 0.00 sg

Stop time	Description
08:00	Start report on 30/9-19 from 08:00 HRS
23:59	Rig move to new location. Block 30/9-19

Daily report no : 2 **Date:** 1998-09-07
Midnight depth : 0 m MD **Estimated PP:** sg **Mud weight:** 0.00 sg

Stop time	Description
10:00	Rig move to new location.
23:59	Running anchor operation at location.

Daily report no : 3 **Date:** 1998-09-08
Midnight depth : 0 m MD **Estimated PP:** sg **Mud weight:** 0.00 sg

Stop time	Description
05:00	Running anchor operation at location. Ballasting and anchortesting.
11:00	Replace anchor #2 and reposition rig.
13:00	RIH with 36" BHA.
23:59	Smedvig work on emergency controlsystem for the ballast pumps according to DNV requirements.

Daily report no : 4 **Date:** 1998-09-09
Midnight depth : 231 m MD **Estimated PP:** 1.03 sg **Mud weight:** 1.05 sg

Stop time	Description
03:00	Smedvig work on emergency controlsystem for the ballastpumps according to DNV requirements.
04:30	RIH to 127m.
10:30	Tag bottom at 133m. (Depth ref: 17 1/2" bit.) Wask down first 5m, take surveys-OK. Drill 36" hole to TD. (Depth ref: 36" holeopener.)
11:30	Pump 20m3 Hi-visc & circulate bottoms up.
12:00	Displace hole to 1,20 sg mud.
13:00	Performed wiper trip to seabed.
14:00	Tag bottom at 231m. Work boulders from 217m to 231m. (Depths ref: 36" holeopener.)
14:30	Displace hole to 30m3 1,20 sg mud and 30m3 1,50 sg mud.
17:00	POOH. Checked beacon-readings at seabed.
18:00	Clean rigfloor and prepare to run 30" conductor.
20:00	Pick up and run 30" conductor.
22:30	Run 89m stinger inside 30" conductor. Make up 30" runningtool and connect runningtool to PGB.
23:59	Run 30" conductor on landingstring to TD.

Daily report no : 5 **Date:** 1998-09-10
Midnight depth : 233 m MD **Estimated PP:** 1.03 sg **Mud weight:** 1.05 sg

Stop time	Description
00:30	Verified landing with the ROV. Checked the bullseye.
01:00	Pumped 40 m3 seawater with the rig pumps.
03:00	Flushed and pressure tested the surface lines to 250 bar. Mixed and pumped cement.
09:00	Waited on cement.
11:00	Released the running tool and pulled out of the hole.
13:30	Laid down the casing running tool, the cement equipment and cleared the rig floor.
15:00	Made up the 26" clean out assembly.
17:30	Ran in with the clean out assembly to 199 m.
18:00	Broke the circulation and tagged the cement at 227 m.
19:00	Drilled out the cement in the shoe track and 30" shoe at 231 m. Drilled the new hole to 233 m. Pumped 15 m3 high viscous mud and circulated the hole volume with seawater.
21:00	Pulled out with the clean out assembly.
23:00	Picked up the 5" drill pipe from the deck and racked back stands in the derrick.
23:59	Rig operations stopped due to bearing failure in the drawwork's brake.

DAILY REPORT ON WELL 30/9-19

Daily report no : 6 **Date:** 1998-09-11
Midnight depth : 233 m MD **Estimated PP:** 1.03 sg **Mud weight:** 1.05 sg

Stop time	Description
13:30	Waited on new bearing for the drawworks elmagco brake.
22:00	Install and mount new bearing for the drawworks elmagco brake.
23:59	Make up 9 7/8" pilothole assembly.

Daily report no : 7 **Date:** 1998-09-12
Midnight depth : 794 m MD **Estimated PP:** 1.03 sg **Mud weight:** 1.05 sg

Stop time	Description
01:00	Enter 30" housing with 9 7/8" bit and continue running in the hole to 230 m.
09:00	Drilled pilot hole from 233m to 417m
09:30	Circulate bottoms up
14:00	Drilled pilothole from 417m to 502m
14:30	Circulate bottoms up and flowcheck, while restart GeoService and Anadrill equipment
18:30	Drilled 9 7/8" pilothole from 502m to 589m,
23:59	Drilled 9 7/8" pilothole from 794m to 980m

Daily report no : 8 **Date:** 1998-09-13
Midnight depth : 1202 m MD **Estimated PP:** 1.03 sg **Mud weight:** 1.05 sg

Stop time	Description
04:30	Drilled 9 7/8" pilothole from 794m to 980m Circulate bottoms up and flowcheck, while restart GeoService and Anadrill equipment Drilled 9 7/8" pilothole from 980m to 1017m
05:00	Circulated while re-starting Geoservice and Anadrill equipment
12:00	Drilled 9 7/8" pilothole from 980m to 1202m
13:30	Circulated bottoms up. Pump and displace 58m3 1.20sg mud on bottom
14:00	Checked TDS and Dollies for loose bolts
15:30	Pulled out with the hole assembly to 230m
16:00	Pumped and displaced 30" casing with 40m3 1.20sg mud
17:30	Pull out with the BHA and laid down bit, bit sub, float , CDR, MWD and 2 x NMDC
21:30	Picked up 18 3/8 housing and installed the bore protector. Made up running tool with Halliburton wiper plug installed. Racked housing in derrick on HWDP
22:30	Made up Halliburton cement head on 5" HWDP and racked in derrick.
23:59	Made up the 26" BHA

Daily report no : 9 **Date:** 1998-09-14
Midnight depth : 1202 m MD **Estimated PP:** 1.03 sg **Mud weight:** 1.05 sg

Stop time	Description
02:30	Made up the 26" BHA while running in to the wellhead. Enter the 30" housing with the 26" bit and ran in to 208m.
03:00	Function tested MWD tool
17:30	Opened 9 7/8" pilot hole to 26" from 233m to 645m
18:30	Circulated bottoms up
19:00	Replaced leaking hydraulic hose in HPU-unit
23:59	Opened 9 7/8" pilot hole to 26" from 645m to 810m

Daily report no : 10 **Date:** 1998-09-15
Midnight depth : 1205 m MD **Estimated PP:** 1.03 sg **Mud weight:** 1.20 sg

Stop time	Description
04:00	Opened 9 7/8" pilothole to 26" from 810m to 942 m.
05:00	Pumped and circulated a 10m3 Hi-Vis pill around to seabed
14:00	Opened 9 7/8" pilot hole to 26" from 942m to 1205m.
16:30	Displaced the hole to 1,20 sg mud to 443 m.
17:00	Worked and reamed tight hole from 1196 m to 1205 m.
19:00	Pulled out with the 26" assembly from 1205 m to 1047 m.

DAILY REPORT ON WELL 30/9-19

Daily report no : 10 **Date:** 1998-09-15
Midnight depth : 1205 m MD **Estimated PP:** 1.03 sg **Mud weight:** 1.20 sg

Stop time	Description
20:30	Changed dies in DDM tool joint breaker.
22:30	Pulled out with the 26" assembly to 500 m
23:59	Ran in with the 26" assembly to 1114 m.

Daily report no : 11 **Date:** 1998-09-16
Midnight depth : 1205 m MD **Estimated PP:** 1.03 sg **Mud weight:** 1.20 sg

Stop time	Description
00:30	Ran in the hole from 1114 m to 1170 m
01:30	Washed and reamed from 1170m to 1205m
04:00	Displaced hole to 1.20 sg mud to 600 m.
05:30	Pulled out of hole with the 26" assembly from 1205 m to 600 m.
06:00	Lubricated the rig.
07:00	Pump 170 m3 1.20 sg mud.
09:30	Pulled out of the hole to 140 m
11:30	Washed the 30" housing from 140 m to 133 m. Pulled above 30" housing and washed PGB.
13:00	Pulled out with the BHA
14:00	Slipped and cut 35 m of drilling line
16:00	Rigged up the 20" casing running equipment.
20:30	Ran the 20" casing. Entered the 30" housing with 20" shoe joint and continued running in with the casing.
22:30	20" casing took weight at 264 m. Worked casing down from 264 m to 279 m.
23:59	Continued running 20" casing to 360 m.

Daily report no : 12 **Date:** 1998-09-17
Midnight depth : 1205 m MD **Estimated PP:** 1.03 sg **Mud weight:** 1.20 sg

Stop time	Description
08:00	Ran 20" casing from 360 m to 1060 m.
08:30	Installed torque wrench on DDM
11:00	Made up 18 3/4" housing joint and continued running 20" casing on 5" HWDP to 1995 m
12:00	Landed the 18 3/4" housing in the 30" wellhead.
19:30	Pressure tested surface line to 200 bar. Mixed and pumped the cement. Released the dart and displaced the cement.
20:00	Bled back to the cement unit.
21:30	Released the running tool and washed the RGB.
22:30	Pulled out and laid down the 20" housing running tool.
23:00	Changed to 350 t bails.
23:59	Laid down cement head, X-overs and 3 joints of HWDP

Daily report no : 13 **Date:** 1998-09-18
Midnight depth : 1205 m MD **Estimated PP:** 1.03 sg **Mud weight:** 1.30 sg

Stop time	Description
00:30	Made up the Drill-Quip hang off tool and racked in derrick.
04:00	Laid down the 26" BHA. Changed out the 8" drilling jar and racked same in derrick.
06:30	Ran in with the 3 1/2"/5" grout string. Stab into grout funnel on RGB and continued running in to 163 m.
08:30	Flushed and pressure tested surface lines to 100 bar. Mixed and pumped cement slurry, and displaced cement with seawater.
10:00	Pulled out to 132 m and washed the RGB
11:00	Pulled out with grouting string.
12:30	Rigged up the BOP handling equipment. Moved the rig 30 m off location. Made up 2 riser handling joints.
21:00	Skid BOP to well center. Installed guide wires. Connected riser handling joint. Pressure tested the choke/kill lines to 410 bar before installing the slip joint.
23:59	Engaged the support ring and installed choke/kill goosenecks.

DAILY REPORT ON WELL 30/9-19

Daily report no : 14 **Date:** 1998-09-19

Midnight depth : 1205 m MD **Estimated PP:** 1.03 sg **Mud weight:** 1.30 sg

Stop time	Description
03:00	Mowed the rig over the well. ROV re-installed the guide line no. 2 anchor in post
04:30	Landed the BOP on the wellhead. Latched the connector and overpull tested to 30 tons. OK Rigged down the BOP handling equipment.
07:00	Rigged down the BOP equipment and installed diverter. Changed to 350 ton bails.
09:00	Pressure tested DDM kelly coks to 345 bar
10:30	Picked up 3 stands 5" U-170 drill pipe and racked back in the derrick.
11:00	Lubricated the rig and serviced the DDM
12:00	Picked up 2 stands 5" U-170 drill pipe and racked back in the derrick.
18:30	Made up the 17 1/2" BHA while running in to 224 m.
19:00	Function tested the MWD tool and displaced the riser to 1.20 sg mud.
19:30	Ran in the hole to 370 m.
21:30	Function tested the BOP stack.
23:00	Ran in with the 17 1/2" assembly, tagged top of cement at 1150 m.
23:59	Drilled cement from 1150 m to 1159 m.

Daily report no : 15 **Date:** 1998-09-20

Midnight depth : 1552 m MD **Estimated PP:** 1.10 sg **Mud weight:** 1.30 sg

Stop time	Description
00:30	Attempted to circulate cement contaminated mud.
01:30	Displaced the hole with seawater.
02:00	Trouble shoot seawater supply to mud pumps.
02:30	Drilled cement from 1159 m to 1186 m. Drilled float collar at 1186 m. Drilled shoe at 1198 m and cleaned out rathole to 1205 m.
04:30	Drilled 17 1/2" hole from 1175 m to 1205 m.
06:00	Pumped 20 m3 Hi-Vis mud and displaced the hole to 1.30 sg new Glydrill mud.
08:30	Pulled out to 1191 m. Rigged up and pressure tested surface lines to 100 bar. Performed leak-off test to 1.62 sg.
23:59	Drilled 17 1/2" hole from 1208 m to 1552 m.

Daily report no : 16 **Date:** 1998-09-21

Midnight depth : 1974 m MD **Estimated PP:** 1.37 sg **Mud weight:** 1.45 sg

Stop time	Description
23:59	Drilled and oriented 17 1/2" hole from 1552 m to 1974 m.

Daily report no : 17 **Date:** 1998-09-22

Midnight depth : 2244 m MD **Estimated PP:** 1.10 sg **Mud weight:** 1.45 sg

Stop time	Description
01:00	Drilled 17 1/2" hole from 1974 m to 1988 m.
02:00	Rig power failure in the main panel.
02:30	Re-started the copmputer equipmentl and the gas detection equipment.
03:00	Drilled 17 1/2" hole from 1988 m to 1998 m.
04:00	Circulated and re-startet the computer equipment and ythe gas detection equipment.
04:30	Reamed and re-logged with the MWD from 1988 m to 1998 m.
08:30	Drilled the 17 1/2" hole from 1998 m to 2061 m.
09:30	Rig power failure.
23:59	Drilled the 17 1/2" hole from 2061 m to 2244 m.

Daily report no : 18 **Date:** 1998-09-23

Midnight depth : 2329 m MD **Estimated PP:** 1.10 sg **Mud weight:** 1.45 sg

Stop time	Description
06:00	Drilled the 17 1/2" hole from 2244 m to 2277 m.
14:00	Continued drilling 17 1/2" hole from 2244 m to 2329 m.
18:30	Swept hole with 10 m3 weighted high viscosity pill and circulated until hole was clean.
23:30	Flow checked well and pulled out of hole to 20" casing shoe at 1198 m.

DAILY REPORT ON WELL 30/9-19

Daily report no : 18 **Date:** 1998-09-23
Midnight depth : 2329 m MD **Estimated PP:** 1.10 sg **Mud weight:** 1.45 sg

Stop time	Description
23:59	Flow checked well and continued pulling out of hole to 1171 m.

Daily report no : 19 **Date:** 1998-09-24
Midnight depth : 2329 m MD **Estimated PP:** 1.10 sg **Mud weight:** 1.46 sg

Stop time	Description
04:00	Continued pulling out of hole to 11 m.
05:00	Downloaded MWD memory bank. Racked tool back in derrick.
07:30	Retreived the 20" bore protector and washed the wellhead/BOP..
09:30	Made up the 13 3/8" casing hanger to stand of drillpipe. Racked in the derrick.
10:30	Made up and loaded the cement head. Racked back in the derrick.
11:00	Serviced the hoisting equipment.
13:00	Rigged up to run the 13 3/8" casing.
23:00	Ran the 13 3/8" casing according to programme to 1197 m.
23:59	Rigged up 500 t bails and the fill-up tool.

Daily report no : 20 **Date:** 1998-09-25
Midnight depth : 2329 m MD **Estimated PP:** 1.10 sg **Mud weight:** 1.46 sg

Stop time	Description
01:00	Rigged up the bails and the fill-up tool.
08:00	Ran the 13 3/8" casing to 2182 m.
08:30	Rigged down fill-up tool and changed to short bails.
10:00	Made up casing hanger. Rigged down casing handling equipment.
12:00	Picked-up landing string and landed casing hanger in wellhead.
14:30	Circulated and conditioned mud prior to cementing.
16:00	Pressure tested surface lines and cemented as per program.
18:00	Displaced cement and attempted to pressure test casing.
19:00	Sat and tested seal assembly.
20:00	Released running tool and pulled out of hole.
21:30	Sat 13 3/8" wear bushing.
23:59	Breaked and laid down 17 1/2" bottom hole assembly.

Daily report no : 21 **Date:** 1998-09-26
Midnight depth : 2329 m MD **Estimated PP:** 1.10 sg **Mud weight:** 1.40 sg

Stop time	Description
01:00	Continued breaking and laying down 17 1/2" bottom hole assembly.
05:30	Built 12 1/4" bottom hole assembly.
06:00	Service hoisting equipment
09:00	Picked up singles of 5" drillpipe while running in hole.
10:30	Pressure tested 13 3/8" casing.
12:30	Continued picking up singles of 5" drillpipe while running in hole.
15:00	Continued running in hole to 2254 m.
16:00	Circulated and conditioned mud.
19:00	Tagged cement. Drilled float, shoe track and shoe. Cleaned out rathole and drilled 3 m of new formation.
21:00	Swept hole with 10 m3 high-viscosity pill and condition mud prior to leak off test.
21:30	Performed leak off test.
23:59	Drilled 12 1/4" hole from 2332 m to 2390 m.

Daily report no : 22 **Date:** 1998-09-27
Midnight depth : 2787 m MD **Estimated PP:** 1.10 sg **Mud weight:** 1.35 sg

Stop time	Description
23:59	Continued drilling 12 1/4" hole from 2390 m to 2787 m. Cut mud weight from 1,40 to 1,35 sg while drilling.

Daily report no : 23 **Date:** 1998-09-28
Midnight depth : 2922 m MD **Estimated PP:** 1.10 sg **Mud weight:** 1.35 sg

Stop time	Description
09:30	Continued drilling 12 1/4" hole from 2787 m to 2922 m.
12:30	Circulated and conditioned mud. Flow checked well.
13:00	Pulled out of hole to 2855 m.
13:30	Serviced hoisting equipment
18:00	Pulled back into 13 3/8" casing shoe at 2318 m.
19:00	Ran back to 2922 m.
22:00	Swept hole with 2 x high viscosity pills and circulated until hole was clean. Flow checked well.
23:30	Pulled out of hole to 13 3/8" casing shoe.
23:59	Flow checked well and continued pulling out of hole.

Daily report no : 24 **Date:** 1998-09-29
Midnight depth : 2922 m MD **Estimated PP:** 1.10 sg **Mud weight:** 1.35 sg

Stop time	Description
05:00	Continued pulling out of hole.
06:00	Loaded cement head and racked it back in derrick.
07:30	Slipped and cut 34 m off drilling line.
08:00	Serviced hoisting equipment.
10:00	Made up casing hanger with cement plugs and racked in derrick.
12:00	Ran in hole and washed wellhead and retrieved 13 3/8" wear bushing.
12:30	Held pre - job safety meeting prior to start running 9 5/8" casing.
14:30	Rigged up 9 5/8" casing handling equipment.
23:59	Ran 9 5/8" casing to 1070 m.

Daily report no : 25 **Date:** 1998-09-30
Midnight depth : 2922 m MD **Estimated PP:** 1.10 sg **Mud weight:** 1.36 sg

Stop time	Description
08:00	Continued running 9 5/8" casing to 2312 m.
08:30	Serviced hoisting equipment.
09:00	Repaired draw-work brake.
12:30	Continued running 9 5/8" casing to 2774 m
14:30	Made up 9 5/8" casing hanger and rigged down casing handling equipment
15:30	Ran in with landing string to 2904 m. Made up cement hose and landed casing in wellhead.
17:30	Broke circulation and circulated bottoms up.
19:00	Tested surface lines. Cemented 9 5/8" casing according to program.
20:00	Displaced cement with rig pumps. Observed wiper plug bump, would not hold any pressure.
21:00	Sat and tested seal assembly.
23:59	Tested BOP on yellow pod. Function tested on blue pod from mini panel.

Daily report no : 26 **Date:** 1998-10-01
Midnight depth : 2922 m MD **Estimated PP:** 1.10 sg **Mud weight:** 1.35 sg

Stop time	Description
02:00	Released casing hanger running tool and pulled out of hole.
03:00	Attempted to set 9 5/8" wear bushing.
04:30	Ran in hole with jet sub and washed BOP and wellhead. Pulled out of hole.
05:30	Sat 9 5/8" wear bushing.
06:00	Changed back to drilling bails.
08:30	Rigged up and tested surface equipment.
10:00	Broke and laid down cement head and 3 x 5" drillpipe.
14:30	Made up 8 1/2" bottom hole assembly.
15:30	Ran in hole with 5" drillpipe to 643 m.
19:00	Attempted to function test upper pipe ram on accoustic system. Ram would not open. Worked pipe in rams until free. Circulated one riser volume.
20:00	Recharged BOP accumulaters and tested upper pipe ram on accoustic system.
23:59	Continued running in hole and tagged top of cement at 2567 m.

Norsk Hydro

DAILY REPORT ON WELL 30/9-19

Daily report no : 27 **Date:** 1998-10-02
Midnight depth : 2922 m MD **Estimated PP:** 1.10 sg **Mud weight:** 1.35 sg

Stop time	Description
00:30	Broke circulation and took free torque.
02:30	Drilled cement from 2567 m to 2608 m.
03:30	Rigged up surface lines and tested casing.
16:00	Continued drilling cement and float collar at 2859 m.
16:30	Cleaned out shoe track and tagged casing shoe with 2 tons.
18:30	Swept hole with 10 m3 high viscosity pill and conditioned mud.
19:30	Took injection rates.
23:59	Pulled out of hole.

Daily report no : 28 **Date:** 1998-10-03
Midnight depth : 2922 m MD **Estimated PP:** 1.10 sg **Mud weight:** 1.35 sg

Stop time	Description
02:30	Made up mule shoe and picked up 3 1/2" drillpipe.
05:30	Continued running in hole and tagged casing shoe at 2907 m.
06:00	Spaced out drillstring and prepared for squeezing cement.
07:00	Circulated bottoms up and took injection rates.
08:00	Sat balanced cement plug as per program.
09:30	Pulled out of hole to 2550 m.
10:00	Reverse circulated 1,5 times string volume,
10:30	Squeezed 5,8 m3 of cement.
19:00	Attempted to bleed back static pressure, casing shoe leaked. Held a 97 bar back pressure while waiting on cement to set.
19:30	Bled off static pressure and rigged down surface equipment.
22:30	Pulled out of hole.
23:59	Laid down 12 1/4" bottom hole assembly.

Daily report no : 29 **Date:** 1998-10-04
Midnight depth : 2958 m MD **Estimated PP:** 1.13 sg **Mud weight:** 1.21 sg

Stop time	Description
04:00	Continued laying down 12 1/4" bottom hole assembly and 9 x 5" drillpipe.
07:30	Built new 8 1/2" bottom hole assembly.
11:30	Picked up 5" drillpipe while running in hole.
12:00	Continued running in hole to 1416 m.
12:30	Serviced hoisting equipment.
14:00	Continued in hole to 2575 m.
14:30	Repaired cooling water leak in draw-work.
15:00	Continued in hole to 2844 m.
15:30	Reamed down from 2844 m to 2906 m.
16:00	Drilled cement and casing shoe at 2907 m. Washed down rathole to 2922 m.
16:30	Drilled 8 1/2" hole from 2922 m to 2925 m.
18:00	Circulated and conditioned mud prior to leak off test.
19:00	Pulled back into 9 5/8" casing shoe and performed leak off test.
20:30	Displaced well to 1,21 sg Glydril mud.
23:59	Drilled and oriented from 2925 m to 2958 m.

Daily report no : 30 **Date:** 1998-10-05
Midnight depth : 3184 m MD **Estimated PP:** 1.22 sg **Mud weight:** 1.25 sg

Stop time	Description
11:00	Continued drilling and orienting 8 1/2" hole from 2958 m to 3087 m.
13:00	Circulated bottoms up due to relatively high gas concentration in returns.
14:00	Flow checked well and circulated bottoms up. Increased mud weight to 1,23 sg while circulating.
18:00	Drilled and oriented 8 1/2" hole from 3087 m to 3148 m.
20:00	Flow checked drilling break and circulated bottoms up. Increased mud weight to 1,25 sg.
22:00	Continued drilling to 3184 m.
23:00	Circulated bottoms up for samples.
23:59	Flow checked well and pulled out to 9 5/8" casing shoe.

DAILY REPORT ON WELL 30/9-19

Daily report no : 31 **Date:** 1998-10-06
Midnight depth : 3239 m MD **Estimated PP:** 1.22 sg **Mud weight:** 1.26 sg

Stop time	Description
00:30	Ran back to 3184 m.
02:00	Swept hole with 10 m3 high viscosity mud.
02:30	Pulled out of hole to run core barrel.
07:30	Continued out of hole.
10:30	Made up core barrel.
14:00	Ran in hole with core barrel to 9 5/8" casing shoe.
14:30	Continued in hole to 3127 m.
16:00	Washed down to 3184 m.Circulated bottoms up.
17:00	Spaced out string and dropped ball.
18:30	Cut core # 1 from 3184 m to 3240,3 m.
19:00	Pulled out of hole to 9 5/8" casing shoe.
23:59	Continued pulling out of hole to 62 m.

Daily report no : 32 **Date:** 1998-10-07
Midnight depth : 3255 m MD **Estimated PP:** 1.13 sg **Mud weight:** 1.26 sg

Stop time	Description
02:00	Broke and laid down inner core barrel.
05:30	Made up new core head and installed new inner barrel.
07:00	Ran in hole to 275 m.
07:30	Serviced hoisting equipment
08:00	Continued in hole to 1075 m.
09:00	Cut and slipped 34 m off drilling line.
11:00	Repaired drilling line anchor on draw-work.
13:00	Continued running in hole to 9 5/8" casing shoe.
13:30	Continued running in hole to 3182 m.
15:00	Washed down to 3238 m. Spaced out string and pumped down ball.
19:30	Cut core # 2 from 3240,3 m to 3254,5 m
20:00	Flow checked and pulled out to casing shoe.
23:59	Continued pulling out of hole to 200 m.

Daily report no : 33 **Date:** 1998-10-08
Midnight depth : 3255 m MD **Estimated PP:** 1.13 sg **Mud weight:** 1.26 sg

Stop time	Description
01:00	Continued pulling out of hole with bottom hole assembly.
02:00	Laid out inner barrel with core.
03:00	Racked 28 m of outer core barrel in derrick. Broke and laid down remaining 27 m.
04:30	Rigged up to run wireline logs.
05:30	Picked up logging tools for suite # 1: PEX
10:00	Ran in hole with logging suite # 1. PEX. Logged open hole section and pulled out of hole.
13:30	Laid down tools for suite # 1 PEX. Made up tools for suite # 2.
17:00	Ran in hole with suite # 2. Stuck while taking first sample at 3247 m. Worked wireline.
19:00	Replaced broken compensator wire, snatch block and T-bar.
20:30	Continued working wire-line in an attempt to free logging tools.
23:59	Prepared and rigged up equipment for fishing of Schlumberger logging tools.

Daily report no : 34 **Date:** 1998-10-09
Midnight depth : 3255 m MD **Estimated PP:** 1.13 sg **Mud weight:** 1.26 sg

Stop time	Description
04:00	Made up Schlumberger overshot and stripped in the hole over wire-line.
04:30	Wire-line parted. Rigged down sheave from derrick.
06:00	Pulled out of hole with drillpipe.
09:00	Secured wire-line. Retreived stuck sinker bars from drillpipestand and reterminated wire-line connection.
10:00	Rigged up for stripping in the hole over wire-line.
11:30	Drifted drillpipe in derrick with a 2,75 inch drift.
23:59	Stripped over wire-line with Schlumberger overshot to 2286 m.

DAILY REPORT ON WELL 30/9-19

Daily report no : 35 **Date:** 1998-10-10
Midnight depth : 3255 m MD **Estimated PP:** 1.13 sg **Mud weight:** 1.26 sg

Stop time	Description
05:30	Continued stripping in hole over wire-line to 3206 m.
06:00	Worked logging tools free. Pulled out of hole with drillpipe to 3147 m.
10:30	Re-rigged wire-line equipment, installed "Torpedo" connection.
23:59	Continued logging with Modular Formation Dynamic Tester.

Daily report no : 36 **Date:** 1998-10-11
Midnight depth : 3255 m MD **Estimated PP:** 1.13 sg **Mud weight:** 1.26 sg

Stop time	Description
05:30	Continued logging with Modular Formation Dynamic Tester.
07:00	Rigged down surface equipment.
10:00	Pulled out with drillpipe to 3004 m.
13:30	Cut cable. Made 2 new rope socket connections.
20:00	Logging tools stuck. Ran back with drillpipe to 3158 m. Worked tools free.
23:30	Pulled out with drillpipe to 3090 m.
23:59	Started making 2 new rope-socket connections.

Daily report no : 37 **Date:** 1998-10-12
Midnight depth : 3255 m MD **Estimated PP:** 1.13 sg **Mud weight:** 1.26 sg

Stop time	Description
04:30	Continued making new rope-socket connection on the wireline cable.
06:30	Logged with mutual formation dynamic tester.
09:00	Rigged up and circulated. Engaged the fish in the overshot.
10:30	Rigged T-bar and pulled off the weak point in the logging cable.
12:30	Pulled out with the logging cable and rigged down the surface equipment.
13:30	Pulled out to 9 5/8" casing shoe.
17:30	Pulled out of the hole.
19:30	Laid down the logging tools.
22:30	Built the 8 1/2" bottom hole assembly.
23:00	Replaced the faulty lucifer valve on drawwork brake.
23:59	Ran in the hole to 1214 m.

Daily report no : 38 **Date:** 1998-10-13
Midnight depth : 3450 m MD **Estimated PP:** 1.20 sg **Mud weight:** 1.26 sg

Stop time	Description
00:30	Function tested the MWD.
02:00	Ran in the hole to 2905 m.
02:30	Ran in the hole to 3105 m.
05:00	Reamed the tight spots to 3254 m.
17:00	Drilled the 8 1/2" hole from 3254 m to 3450 m.
20:30	Circulated to clean the hole and take samples.
23:59	Flowchecked and pulled out to 2896 m.

Daily report no : 39 **Date:** 1998-10-14
Midnight depth : 3494 m MD **Estimated PP:** 1.22 sg **Mud weight:** 1.31 sg

Stop time	Description
00:30	Circulated bottoms up at 2896 m.
05:00	Flowchecked well and pulled out of hole.
05:30	Dumped CDR memory. Broke bit and racked stand in derrick.
06:00	Circulated the bottoms up at 2896 m. Observed the well, sluggeds the pipe and pulled out of the hole. Racked the bottom hole assembly. Made up the 120' coring assembly.
07:00	Made up corehead and coreassembly # 3.
08:00	Ran in hole with coreassembly an BHA to 94 m.
09:30	Pulled out off hole and laid down corebarrel assembly 3.

DAILY REPORT ON WELL 30/9-19

Daily report no : 39 **Date:** 1998-10-14

Midnight depth : 3494 m MD **Estimated PP:** 1.22 sg **Mud weight:** 1.31 sg

Stop time	Description
12:00	Made up 8,5" bit assembly. Loaded MWD.
15:00	Ran in hole with 8,5" bit.
15:30	Continued run in hole to 3415 m.
16:30	Washed and reamed from 3415 to 3450 m.
18:00	Increased mudweight from 1.26 to 1,31 SG.
18:30	Drilled 8,5" hole from 3450 to 3467,5 m.
20:00	Circulated bottoms up.
22:30	Continued drill 8,5" hole to 3494 m.
23:30	Circulated bottoms up at 3494.
23:59	Flowchecked well. Gained 150 liters in triptank within 20 minutes.

Daily report no : 40 **Date:** 1998-10-15

Midnight depth : 3494 m MD **Estimated PP:** 1.26 sg **Mud weight:** 1.31 sg

Stop time	Description
01:30	Circulated bottoms up. No gas in return mud.
03:00	Observed well static. Pulled bit into casing shoe.
09:00	Observed well static. Pulled out of hole.
10:30	Made up BOP test tool. Ran in with same and set in wellhead
16:30	Function tested and pressure tested BOP according to Norsk Hydro specifications.
17:30	Pulled out with BOP test tool and laid down same.
20:00	Made up coreassembly # 3 with 180' corebarrel.
23:59	Ran in hole with core-assembly.

Daily report no : 41 **Date:** 1998-10-16

Midnight depth : 3522 m MD **Estimated PP:** 1.26 sg **Mud weight:** 1.31 sg

Stop time	Description
00:30	Continued run in hole to 3494 m.
04:30	Circulated bottoms up to evaluate trip gas / pore pressure.
05:00	Pumped down ball to activate corebarrel.
07:00	Cut core from 3494 to 3522 m. Core jammed off.
08:00	Flowchecked well and pulled out to casing shoe.
11:00	Flowchecked well and pulled out to 562 m.
11:30	Flowchecked well with BHA below BOP prior to pull out of hole with corebarrel.
12:30	Pulled out of hole with corebarrel.
14:00	Broke and laid down innertubes.
15:30	Broke and laid down complete core assembly.
18:30	Made up BHA # 14 to drill 8,5" hole to TD.
22:00	Ran in hole.
23:00	Continued run in hole to 3478 m.
23:59	Logged cored interval from 3480 m with MWD/CDR tools.

Daily report no : 42 **Date:** 1998-10-17

Midnight depth : 3560 m MD **Estimated PP:** 1.26 sg **Mud weight:** 1.31 sg

Stop time	Description
00:30	Continued logging cored interval from 3508 m to 3522 m with MWD/CDR tools.
02:00	Drilled 8,5" hole 50 m into Dunlin formation. TD at 3560 m.
04:00	Sweaped hole with 10 m3 weighted hi-vis pill and circulate clean hole
04:30	Took slow circulation rates and flow checked well.
05:30	Replaced broken shear-pin on upper racking arm
07:00	Pulled out to casing shoe.
10:30	Flow checked well and pulled out of hole.
11:30	Broke and laid down stabilizers and bit. Dumped CDR-memory.
13:00	Rigged up to run wireline logs
14:30	Picked up logging tools for suite # 1: PEX.
20:00	Ran in hole with suite # 1. PEX. Logged open hole section an pulled out of hole.

DAILY REPORT ON WELL 30/9-19

Daily report no : 42 **Date:** 1998-10-17
Midnight depth : 3560 m MD **Estimated PP:** 1.26 sg **Mud weight:** 1.31 sg

Stop time	Description
22:00	Laid down tools for suite # 1 PEX. Made up tools for suite # 2.
23:59	Computer problems let to loss of FMI calibrations.

Daily report no : 43 **Date:** 1998-10-18
Midnight depth : 3560 m MD **Estimated PP:** 1.26 sg **Mud weight:** 1.31 sg

Stop time	Description
01:30	Calibrated FMI tool due to backup computer fault.
10:00	Ran in hole with suite # 2, FMI. Logged open hole section and pulled out of hole.
13:00	Laid down tools for suite # 2 FMI. Made up tools for suite # 3, CMR.
23:59	Ran in hole with suite # 3, CMR. Logged open hole section.

Daily report no : 44 **Date:** 1998-10-19
Midnight depth : 3560 m MD **Estimated PP:** 1.26 sg **Mud weight:** 1.31 sg

Stop time	Description
06:30	Continued logging open hole section with suite # 3. Pulled out of hole and laid down tools.
08:30	Rigged down all wireline equipment and prepared for wipertrip.
11:00	Repaired broken 1" hydraulic supply hose connected to Topdrive
11:30	Installed diverter element and prepared to make up BHA.
14:00	Made 8 1/2" bit and BHA # 15. Ran in hole to 199 m.
17:30	Ran in hole to 3532 m.
18:30	Washed an reamed from 3532 m to 3560 m.
22:30	Circulated and conditioned mud.
23:59	Flowchecked well and pulled out of hole.

Daily report no : 45 **Date:** 1998-10-20
Midnight depth : 3560 m MD **Estimated PP:** 1.26 sg **Mud weight:** 1.31 sg

Stop time	Description
04:30	Continued pulling out of hole.
05:30	Rigged up to run wireline logs.
07:00	Picked up logging tools for suite # 4, VSP.
08:30	Ran in hole with suite # 4, VSP.
09:30	Pulled out of hole with suite # 4 due to a poor connection in connectorhead between tools and logging wire.
11:00	Rigged down VSP tool and changed connector head.
12:00	Ran in hole with suite # 4, VSP.
16:00	Continued run in hole with suite # 4 to 3258 m. Logged open hole section and pulled out of hole.
16:30	Laid down 3 satelite geofons from the VSP tool.
18:00	Ran in hole with suite # 4, VSP.
19:30	Logged open hole intervals with VSP from 3560 to 2907 m.
20:30	Pulled out of hole with suite # 4.
21:00	Laid down tools for suite # 4, VSP.
23:59	Picked up logging tool # 5, MDT.

Daily report no : 46 **Date:** 1998-10-21
Midnight depth : 3560 m MD **Estimated PP:** 1.26 sg **Mud weight:** 1.31 sg

Stop time	Description
19:30	Ran in hole with suite # 5, MDT. Took fluid samples and pressure points. Pulled out of hole.
21:00	Laid down MDT logging tools.
23:00	Picked up logging tools for suite # 6, CST with 30 sidewall core samplers.
23:59	Ran in hole with suite # 6, CST.

DAILY REPORT ON WELL 30/9-19

Daily report no : 47 **Date:** 1998-10-22
Midnight depth : 3560 m MD **Estimated PP:** 1.26 sg **Mud weight:** 1.31 sg

Stop time	Description
03:30	Continued run in hole with CST logging tools. Took 30 coresamples in reservoar sections. Pulled out of hole with suite # 6, CST.
04:00	Laid down CST tool with sidewall cores.
06:00	Made up cement stinger with divertor sub.
09:30	Ran in hole to 2912 m.
10:30	Made up cement stand with side-entry sub and valves. Racked stand in derrick.
11:30	Slipped and cutted 35 m drill line.
12:00	Lubricated topdrive and dollies.
13:00	Ran in hole to 3543 m.
13:30	Installed cement stand and washed down to 3560 m.
15:30	Circulated and conditioned mud prior to plug back well.
16:00	Flushed and tested surface lines. Held pre-job meeting with crew.
16:30	Mixed and pumped 9,8 m3 slurry for cement plug # 1.
17:00	Displaced slurry with 27,5 m3 mud.
18:00	Pulled out of slurry to 3309 m.
19:30	Circulated out spacer and excess cement at 3309 m.
20:00	Flushed and tested surface lines. Held pre-job meeting with crew.
20:30	Mixed and pumped 9,8 m3 slurry for cement plug # 2.
21:00	Displaced slurry with 25,3 m3 mud.
22:00	Pulled out of slurry to 3058 m.
23:00	Circulated out spacer and excess cement at 3058 m.
23:30	Flushed and tested surface lines. Held pre-job meeting with crew.
23:59	Mixed and pumped 10,4 m3 slurry for cement plug # 3.

Daily report no : 48 **Date:** 1998-10-23
Midnight depth : 3560 m MD **Estimated PP:** 1.26 sg **Mud weight:** 1.31 sg

Stop time	Description
00:30	Displaced slurry with 22,8 m3 mud.
01:30	Pulled out of slurry to 2750 m.
02:00	Circulated out spacer and excess cement at 2750 m m.
05:30	Flowchecked well and pulled out to wellhead at 134 m.
06:00	Stopped due to fault in trafo station 2 - 440 volt system.
07:00	Washed wellhead and BOP area.
07:30	Pulled out of hole with cement stinger.
09:00	Made up 8 1/2" flat bottom mill and ran in hole with BHA.
11:00	Ran in hole to 1531 m.
11:30	Lubricated rig equipment.
12:30	Continued run in hole to 2550 m.
15:00	Attempted twice to pressure test cement plug to 212 bar. No sucsess.
16:00	Ran in hole to 2749 m.
19:30	Circulated and conditioned mud while waiting on cement to set.
20:30	Pressure tested cement plug and 9 5/8" casing to 212 bar.
21:30	Ran in hole and tagged top cement plug with 10 tons downweight.
23:59	Flowchecked and pulled out of hole.

Daily report no : 49 **Date:** 1998-10-24
Midnight depth : 3560 m MD **Estimated PP:** 1.26 sg **Mud weight:** 1.31 sg

Stop time	Description
00:30	Pulled out with 8 1/2" mill to 500 m.
03:00	Installed multi purpose running tool. Retrieved wear bushing with 30 ton overpull.
04:00	Pulled seal assembly with 18 ton overpull.
04:30	Hung up with seal assembly in wellhead. Worked pipe and pulled free with 23 ton overpull.
05:30	Pulled out of hole with seal assembly
07:00	Pulled out of the hole with 8 1/2" mill. Racked BHA.
23:59	No activity on 30/9-19, PO:1. Start 30/9-19 A

DAILY REPORT ON WELL 30/9-19

Daily report no : 50 **Date:** 1998-12-17
Midnight depth : 3560 m MD **Estimated PP:** 1.03 sg **Mud weight:** 1.31 sg

Stop time	Description
15:00	No activity on well 30/9-19. On budget time for well 30/9-19 A
23:59	Waiting on weather to pull anchors.

Daily report no : 51 **Date:** 1998-12-18
Midnight depth : 0 m MD **Estimated PP:** sg **Mud weight:** 1.31 sg

Stop time	Description
23:59	Continued waiting on weather to commence anchor handling. Following anchor handling vessels on location: Viking Titan, Skandi Bergen and Far Grip.

Daily report no : 52 **Date:** 1998-12-19
Midnight depth : 0 m MD **Estimated PP:** sg **Mud weight:** 1.31 sg

Stop time	Description
23:59	Waited on weather to commence anchor handling. Anchor handling vessels on location: Far Grip, Viking Titan, Skandi Bergen and Havila Champion.

Daily report no : 53 **Date:** 1998-12-20
Midnight depth : 0 m MD **Estimated PP:** sg **Mud weight:** 1.31 sg

Stop time	Description
23:59	Waited on weather to commence anchor handling. Anchor handling vessels on location: Far Grip, Viking Titan, Skandi Bergen and Havila Champion.

Daily report no : 54 **Date:** 1998-12-21
Midnight depth : 0 m MD **Estimated PP:** sg **Mud weight:** 1.31 sg

Stop time	Description
08:30	Waited on weather to commence anchor handling. Started deballasting rig @ 0200 hrs. Anchor handling vessels on location: Far Grip, Viking Titan, Skandi Bergen and Havila Champion.
23:59	Anchor handling. V.Titan: Start anch # 6 0830 hr - on bolst 1155 hr, Start # 5 1208 hr - on bolst 2051 hr, start # 10 2308 hr. Far Grip: start # 12 0900 hr - on rig 1250 hr, start # 11 1430 hr - on bolst 1905 hr, start # 4 2340 hr

Daily report no : 55 **Date:** 1998-12-22
Midnight depth : 0 m MD **Estimated PP:** sg **Mud weight:** 1.31 sg

Stop time	Description
05:00	Continued anchor handling. Skandi Bergen had anchor # 3 on bolster @ 0055 hrs, Havila Champ. started # 9 @ 0220 hrs. Rig started pulling on anchor # 1 @ 0355 hrs.
07:00	Waited on weather to continue anchor handling.
15:00	Continued anchor handling. Continued pulling anchor # 1 - on bolster @ 1350 hrs. Skandi Bergen secured anchor # 3 on deck @ 1430 hrs. Departed location 30/9-19 /19 A @ 1500 hrs.
23:59	No activity on well 30/9-19

Estimated Pore Pressure, Fracture, Overburden and Temperature Gradients

Pore Pressure

The pore pressure in well 30/9-19 are based on MWD resistivity log, MDT pressure readings, and DXC.

It is very difficult to calculate pore pressure in Hordaland Group when drilling with high overbalance and PDC bit. Lithological variations make it difficult to estimate pore pressure decrease in Rogaland Gp and pressure development over the boundary to Shetland Gp.

No shallow gas occurs in the upper sediments. Down to 1700m the pore pressure is normal and increases rapidly to max pore pressure 1.32 +/- 0.05 sg. The pore pressure stays constant down to top Rogaland and is evaluated to decrease to 1.10 sg at the top of Shetland Gp. The pore pressure follows a 1.10 sg trend down to a sandstone interval between 3070 - 3074 mTVD. The pore pressure is measured with MDT to 1.14 sg

Results from MDT measurement, in the Brent Gp, shows that the pressure in Tarbert 3 is 1.11 sg and decreasing to 1.07 in Tarbert 1. The gas gradient in Tarbert 2 is 0.025 bar/m, 0.016 bar/m in Tarbert 1, and the oil gradient in Tarbert 1 is 0.052 bar/m. An isolated sandbody in Tarbert 1, at 3255 mTVD, has a pore pressure of 1.22 sg. The pore pressure in Ness formation increases from 1.10 sg to 1.22 sg. The pore pressure in ORE formation is measured to 1.26 sg.

There are no indications of pressure alteration in Dunlin GP down to TD.

Formation Strength

Leak off tests were performed to 1.62 sg @ 1208m, 1.70 sg @ 2332m and 1.81 @ 2924.5m.

Breckels & van Eekelen formula for fracture gradient indicates lower value than LOT in Hordaland and Shetland.

There were no hole problems in the well during drilling.

Overburden Gradient

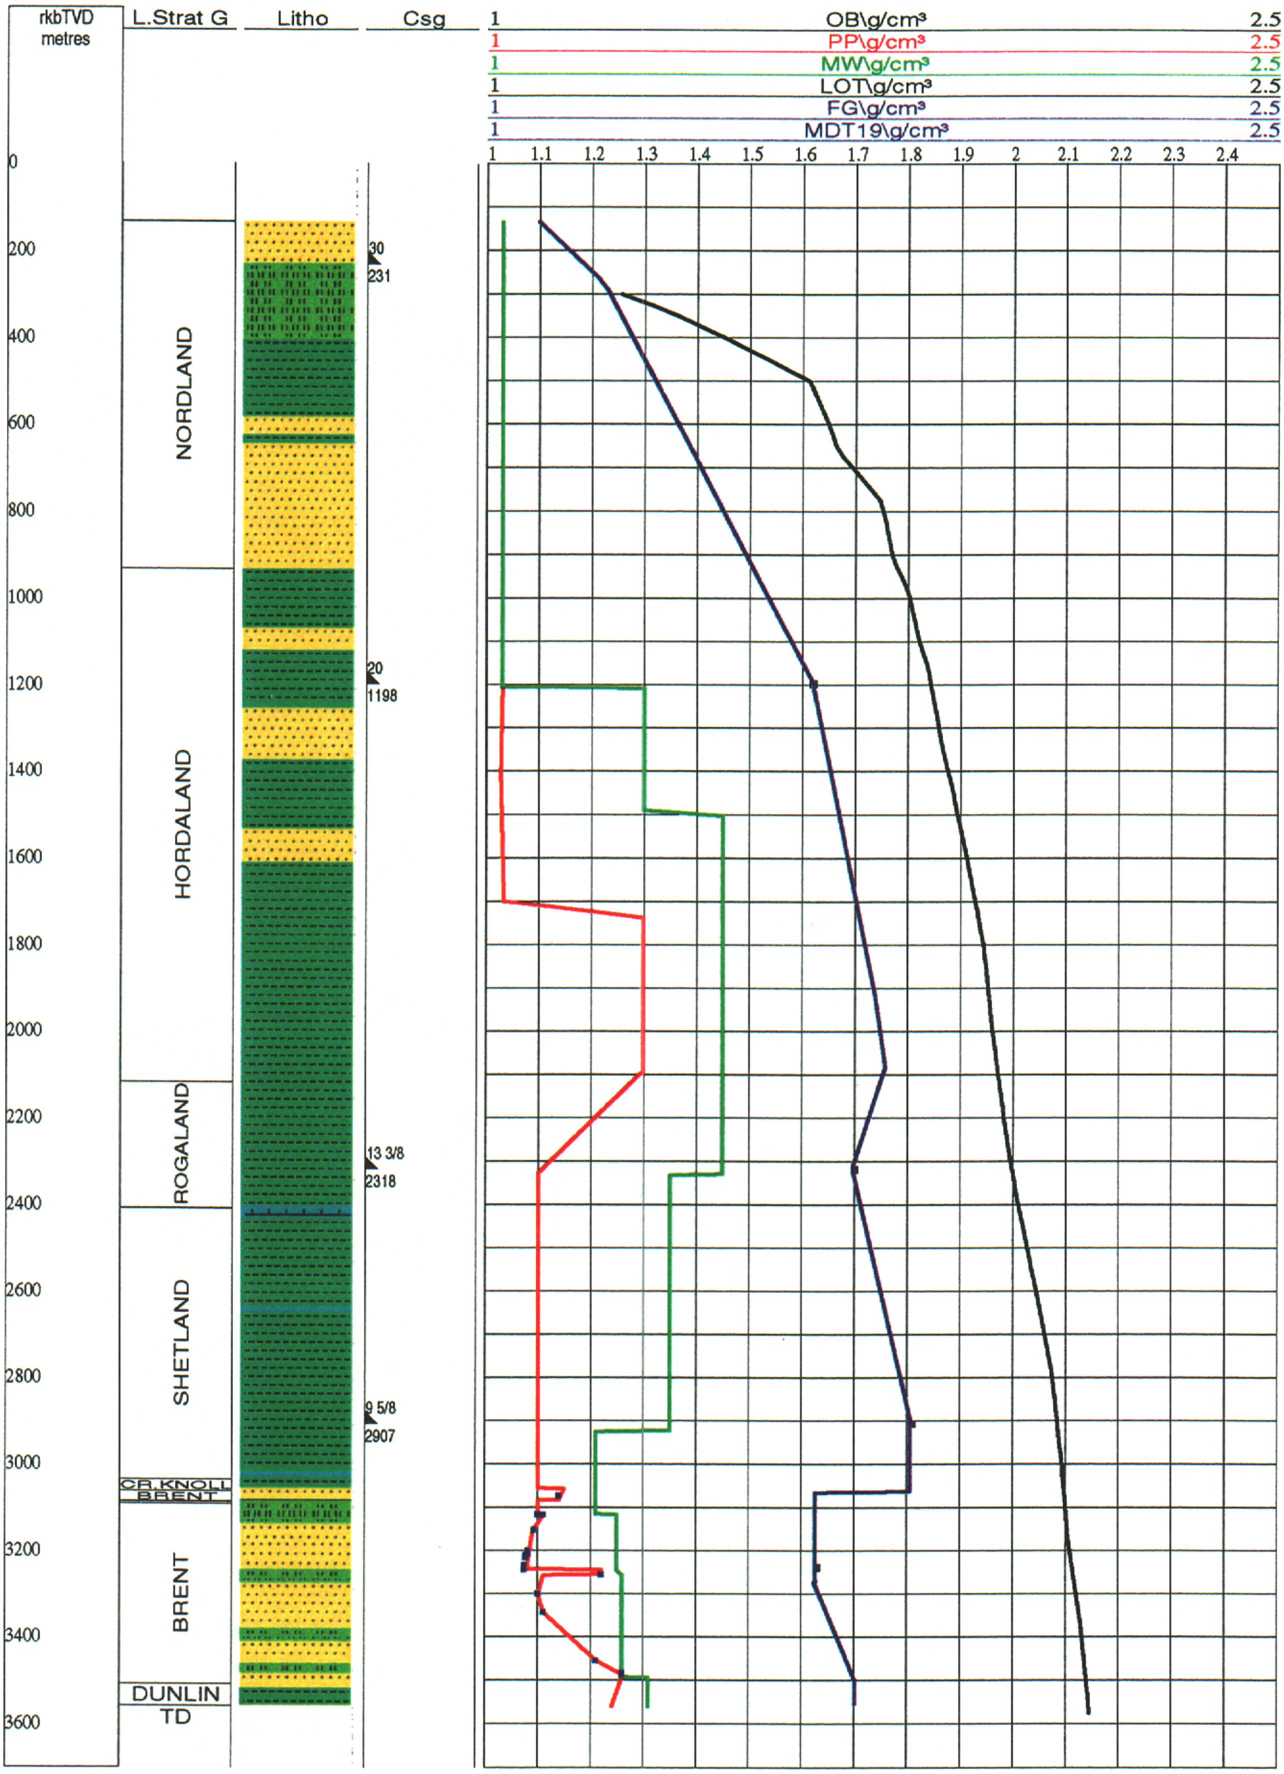
Overburden gradient is taken from prognosis in Drilling program due to absents of density log above reservoar.

Temperature Gradient

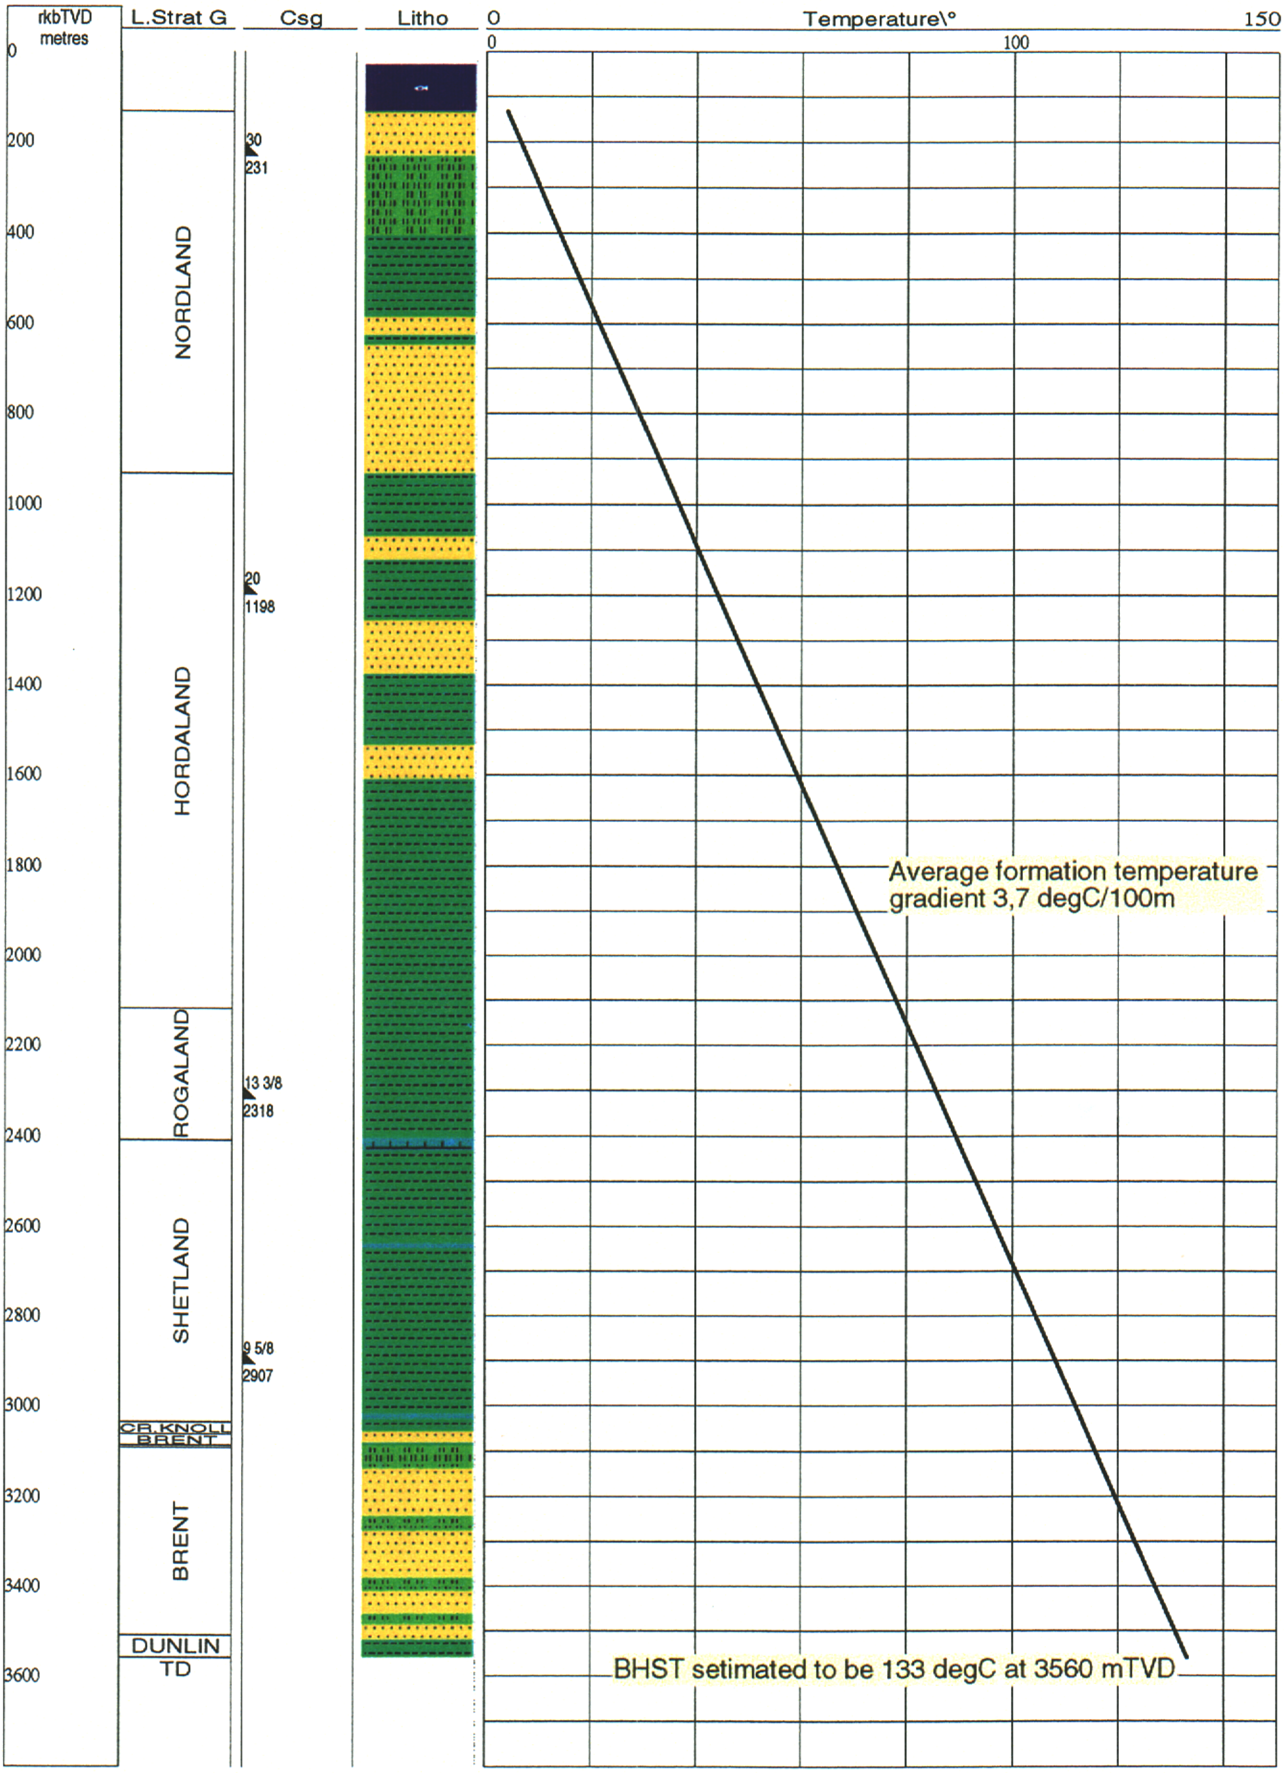
Bottom hole static temperature is taken from DST in well 30/9-19A and measured to 121 deg C from the perforated interval 3242 - 3258 mTVD. The temperaure at TD, 3560 mTVD RKB, was estimated to 133 deg C with a gradient of 3.73 deg/100m.

Well: 30/9-19

Fig.B-1



Estimated Pore pressure, Fracture and Overburden Gradient



Average formation temperature gradient 3,7 degC/100m

BHST setimated to be 133 degC at 3560 mTVD
