C. ATKINSON

27.08.82

Ran anchors.

Carried out chemical inventory check, whilst waiting for drill water from boat.

DATE

28.08.82

Started mixing pre-hydrated gel spud mud.

Made shaker and Thule screens inventory check. Dressed Thule unit with 2×200 mesh.

Made up S.A.P.P./Caustic bags in case of Barite plug

DATE 29.08.82

Prepared to spud. Ran to seabed (364 m) with $17\frac{1}{2}$ " bit+ 36" H/O. Spudded in at 09:00. Drilled hole 364 m to 455 m. Finished mix total 1400 bbls spud mud.

Dressed shale shakers with $\frac{20}{B60} \times \frac{20}{B60} \times \frac{20}{B60}$.

WELL NAME 31/2-9

OPERATOR A/S NORSKE SHELL

ENGINEERS C. ATKINSON

DATE 30.08.82

Drilled 36" hole 455 m to 460 m. Circulated } hour. Spotted 250 bbls hivis pill. Circulated } hour. Surveyed. POOH to +370 m. Recovered survey. RIH. No fill. Circulated. Spotted 100 bbls hivis pill. Circulated ½ hour.

Rigged up and ran 30" casing. Pumped last 15 m down with seawater. Cemented casing. Back flow after displacement. Held pressure and waited on cement.

Mixed 170 bbls of 3 % Calcium chloride cement mix water. Mixed +1125 bbls pre-hydrated gel mud.

DATE 31.08.82

Pulled running tool. Attempted to jet wellhead. No success. Ran universal guideframe and jetted wellhead. POOH. Laid down running tool and 36" BHA. Made up 14 3/4" bit +26" hole.

Tagged cement at 441 m. Drilled cement and shoe. Drilled new 26" hole 460 m to 465 m. Overpulled 170,000 lbs. Washed and reamed section 460 m to 465 m. POOH. Picked up jetting sub and RIH to jet wellhead clean.

Diluted back hivis gel to give gel/seawater mud for drilling out of 30" casing. Transferred from pit to fill sand traps (+140 bbls). Weighted up 320 bbls (pit no. 4) for kill mud at 1.35 S.G.

DATE 01.09.82

POOH to reposition jetting tool. RIH and jetted guidepost/ wellhead area. Some improvement found. POOH with jetting tool.

Rigged up and ran pin connector and marine riser.

WELL NAME 31/2-9

DATE

02.09.82

Landed hydraulic latch and marine riser. Laid down 26" BHA. Made up 14 3/4" BHA. RIH. Tested diverter system. Displaced hole to mud. Drilled 14 3/4" pilot hole 465 m to 701 m with survey every 100 m.

Maintained mud weight at 1.10 S.G. maximum.

Treated cement contamination initially.

DATE

03.09.82

Circulated hole clean prior to survey. POOH to shoe. RIH and drilled 14 3/4" from 701 m to 785 m. Conditioned mud and drilled to 816 m. Circulated with 500 bbls of 1.35 S.G. mud.

POOH. No drag. Ran logs.

Made up new BHA and RIH with 26" under reamer.

DATE

04.09.82

Opened up 14 3/4" hole to 26" from 465 m to 475 m. Changed pump liner. Opened up hole from 475 m to 816 m. Circulated hole clean with one pump while changing liner. Kept mud weight below 1.10 S.G. with water.

WELL NAME 31/2-9

OPERATOR A/S NORSKE SHELL

ENGINEERS C. BLANCHARD / P.T. SKADBERG

DATE 05.09.82

Circulated hole clean. POOH 30 m inside 30" casing. Displaced 1.08 S.G. native mud to seawater. Observed well for 30 mins.

POOH. Pulled riser. Made up cement head. RIH with 26" bit. Tight hole from 485 m to 550 m. Circulated hole with seawater and viscous slugs. RIH to 800 m. Circulated and reamed to 816 m. Mixed up 70 bbls 1.35 S.G. mud in order to displace hole before running casing.

DATE 06.09.82

Displaced hole with 665 bbls of 1.35 S.G. mud and 310 bbls of viscous mud. Ran and cemented casing. Ran BOP's and riser. Mixed new KCl mud.

DATE 07.09.82

Unable to land BOP's due to excess cement around guide base.

Mixed up a total of 1360 bbls of 1.26 S.G. KCl mud. Sheared mud through pumps.

WELL NAME 31/2-9

OPERATOR A/S NORSKE SHELL

ENGINEERS C. BLANCHARD / P. T. SKADBERG

DATE

08.09.82

Unable to land BOP's. Jetted cement around well head with seawater. Tried to clean quide base.

DATE

09.09.82

Jetted cement around well head with seawater. Started to run riser and landed BOP stack.

DATE

10.09.82

BOP stack landed. Tested BOP. O.K. Ran in hole with $17\frac{1}{2}$ " bit and drilled cement from 792 m to 816 m with KCl mud. Continued drilling hole from 816 m to 825 m. Circulated bottoms

Received 600 bbls brine. Mixed 600 bbls new mud.

WELL NAME 31/2-9

A/S NORSKE SHELL OPERATOR

ENGINEERS C. BLANCAHRD / P.T. SKADBERG

DATE 11.09.82

Drilled from 825 m to 1114 m. Dropped survey at 1114 m. POOH. Tight hole from 900 m to 981 m. Circulated at shoe. RIH. Hit tight spot at 933 m. Washed and reamed from 933 m to 952 m. Continued RIH. Drilled from 1114 m to 1152 m.

Lost 100 bbls kill mud while trying to fill slug pit. Also 50 bbls of kill mud was diluted into system.

Changed all shaker screens 20 S over 60 B. Dumped gumbo box and header box every few singles.

DATE 12.09.82

Increased weight of total system to 1.30 S.G. due to tight hole. Drilled from 1152 m to 1362 m. Ran survey at 1362 m.

POOH to 20" casing shoe. RIH tight. Washed and reamed from 933 m to 952 m. Continued RIH. Drilled from 1362 m to 1506 m. Dropped survey. POOH to shoe. Hit tight spot at 1317 m.

Washed and reamed from 1320 m to 1340 m.

DATE 13.09.82

Increased mud weight of active system to 1.35 S.G. due to tight Circulated hole clean. spot. RIH. POOH. No drag.

Rigged up Schlumberger tool and RIH. Not able to pass 1410 m. Logged from 1410 m. Made up new BHA and RIH with $17\frac{1}{2}$ " bit. Tagged bottom at 1506 m. Circulated and POOH. Rigged up Schlumberger tool and RIH again. Logged.

WELL NAME 31/2-9

OPERATOR A/S NORSKE SHELL

ENGINEERS

C. BLANCHARD/ P. T. SKADBERG

DATE

14.09.82

Schlumberger out of hole. RIH with $17\frac{1}{2}$ " bit. Tagged bottom at 1506 m. Circulated. Drilled from 1506 m to 1509 m. Circulated hole clean. POOH. Circulated and cleaned area around wear bushing. Rigged up to run 13 3/8" casing.

15.09.82

Ran and cemented 13 3/8" casing. Diluted back all pits from 1.35 S.G. to 1.18 S.G. Still 1.35 S.G. weight in hole.

Changed screens 2 and 3 on shaker to 60 B over 80 B.

16.09.82

Tested BOP while waiting on cement. Negative test. Pulled riser with upper BOP package. Worked on BOP.

Control of the Contro

Changed Thule screens to 200 mesh new on both sides.

WELL NAME ___ 31/2-9

OPERATOR A/S NORSKE SHELL

ENGINEERS C. ATKINSON/ P. T. SKADBERG

DATE

17,09,82

Worked on BOP upper package.

Cleaned out pit suction lines to remove settled Barite/solids.

DATE

8.09.82

Finished repairing upper package. Ran package with marine riser.

DATE

19.09.82

Tested BOP. Ran wear bushing. Made up 12 1/4" BHA. RIH. Displaced hole to mud (dumped seawater returns and took 1.35 S.G. mud into pit no. 4 and no. 3). Drilled float, cement and shoe. Drilled 12 1/4" hole to 1514 m. Leak off test 1.55 S.G. equivalent. Drilled ahead.

Diluted back heavy mud to give reserve volume. Mixed chemicals to give desired properties.

Kept active weight at 1.18 S.G. max with dilution. Maintained rheology with Drispac.

WELL NAME 31/2-9

OPERATOR A/S NORSKE SHELL

ENGINEERS

C. ATKINSON/ P. T. SKADBERG

DATE

20.09.82

Drilled 1518 m to 1527 m. Circulated drill break. Drilled 1527 m to 1536 m. Circulated. Drilled 1536 m to 1554 m. Circulated bottoms up. POOH. Picked up 30' core barrel. RIH. Circulated ½ hour and dropped ball. Cored 1554 m to 1563 m.

Circulated hour. POOH. Recovered core no. 1 (100 %). Made up 60' core barrel.

DATE

21.09.82

Picked up coring BHA. RIH. Circulated and washed to bottom. 2 m fill. Circulated and dropped ball. Cored 1563 m to 1573 m. POOH inside casing and hung off. Waited on weather.

Continued POOH to recover core no. 2.

Maintained fluid loss control and improved filter cake with LF-5 additions.

DATE

22.09.82

Recovered core no. 2 (83 %). Made up new BHA. RIH. Cored 1573 m to 1591.5 m. POOH. Recovered core no. 3 (100 %). Made up new BHA. RIH. Cored 1591.5 m to 1610 m. POOH to recover core no. 4.

Maintained properties as per spec. Dilution for mud weight at 1.18 S.G. maximum.

WELL NAME 31/2-9

OPERATOR A/S NORSKE SHELL

ENGINEERS

C. ATKINSON

DATE

23.09.82

Recovered core no. 4 (88 %). RIH. Cored 1610 m to 1628 m. POOH. Recovered core no. 5 (98 %). Laid down coring equipment. Made up 12 1/4" BHA. RIH to 1534 m. Opened hole from $8\frac{1}{2}$ " to 12 1/4" from 1554 m to 1616 m.

Maintained system properties and mud weight at 1.18 S.G. maximum.

DATE

24.09.82

Opened hole 1616 m to 1628 m. Drilled 12 1/4" hole 1628 m to 1730 m. Circulated bottoms up. POOH. Changed bit. RIH. Drilled 1730 m to 1770 m. (Well T.D.). Circulated bottoms up.

DATE

25.09.82

Finished circulating bottoms up and cleaning hole. POOH. No drag. Rigged up and ran Schlumberger logs.

THE RESERVE OF THE RESERVE OF THE SECOND OF

Dumped and cleaned out sand trap, gumbo and shaker boxes.

C. ATKINSON

DATE

26.09.82

Continued logging 12 1/4" hole.

DATE

27.09.82

Finished logging. Rigged down Schlumberger.

Laid down $6\frac{1}{2}$ " D.C.'s at $8\frac{1}{2}$ " stabs.

DATE 28.09.82

Made up 2 7/8" tubing and RIH with 5" D.P. Set cement plug at 1765 m to 1625 m. POOH to 1610 m. Reversed out. Set plug 1610m to 1435 m.

POOH to 1400 m. Reversed out. Hole clean. POOH. Laid down 5" D.P. Cut and retrieved 565' of 13 3/8" casing.

OPERATOR: A/S NO

A/S NORSKE SHELL

WELL NO.

31/2-9

36"____

_ HOLE/ __30" ___ CASING INTERVAL

Well 31/2-9 was spudded at 09:00 hrs on 29.08.82 with water depth of 339 m and RKB --> seabed 364 m. A $17\frac{1}{2}$ " bit with 36" hole opener was used to drill 36" hole to a T.D. of 460 m.

Seawater was used for drilling, with pills of hivis pre-hydrated Bentonite pumped as required for hole cleaning.

The hole was displaced with ± 750 bbls hivis gel mud (100 % excess) prior to POOH to run 30" casing. Casing was run and set at 450 m.

Approx. 1400 bbls mud used for this section.

OPERATOR:

A/S NORSKE SHELL

WELL NO.

31/2 - 9

173" HOLE/ 13 3/8" CASING INTERVAL

A 35 to 40 lb/bbl concentration of KCl Polymer was used on this section due to the Bentonite clays to be encountered. While BOP's were run, 1360 bbls of 1.26 KCl mud was mixed.

While trying to land the BOP's it was found that cement was caked up on the well head and the guide base was cleaned by jetting water around the guide base.

When drilling started, the cement was drilled out from 792 m to 816 m with the new KCl mud with no problems.

During this section of hole, the average drill rate was between 30 - 35 m per hour. Tight spots were found and reamed at 900 m to 981 m. 310 bbls of 1.45 S.G. kill mud was mixed to keep in pits at all time. Due to tight hole, the mud weight was increased to 1.30 S.G. and the interal between 933 m and 952 m was reamed. Another section between 1320 m and 1340 m was also tight. After reaching casing point at 1504 m, a wiper trip was made with all tight spots reamed. Schlumberger was unable to get to bottom so the mud weight was increased to 1.35 S.G. and logs were run. While running in hole for clean out trip for casing, 5 m more were drilled to 1509 m. Casing was run and during the cement job 115 bbls of muc was lost to the hole displacement of cement.

"我们这么多的工作,"

OPERATOR:

A/S NORSKE SHELL

WELL NO.

31/2-9

3/4" pilot/26" HOLE/ 20" CASING INTERVAL

A native mud was used to drill this section. After drilling out new 26" hole from 460 m, a 14 3/4" pilot hole was drilled to 816 m and 300 bbls of 1.35 S.G. mud was displaced in the hole to run logs.

Also 320 bbls of 1.35 S.G. kill mud was on hand.

It should be noted that there was some silt/cement built-up around the guide base and jetting was done prior to running marine riser.

After the 14 3/4" pilot hole was logged, a 26" under reamer was run to 816 m. The native mud was kept below 1.10 S.G. After circulating the hole clean, 30" casing was displaced to seawater and the well was observed. The riser was pulled and a 26" bit was run. Tight hole was encountered at 485 m to 550 m. While drilling, viscous slugs were pumped and the hole was drilled to 816 m. The hole was displaced with 665 bbls of 1.35 S.G. mud and 310 bbls of hivis mud was pumped prior to 20" casing. Casing was cemented and BOP's and riser wererun for next section of hole.

OPERATOR:

A/S NORSKE SHELL

WELL NO.

31/2-9

12 1/4" HOLE/ 9 5/8" CASING INTERVAL

A total of 3 days was lost after cementing 13 3/8" casing due to necessary repairs to the BOP upper package. During this time, mud at surface was reduced to 1.18 S.G. mud weight and treated to retain required properties. (Especially fluid loss below 5 cc).

After rerunning BOP and marine riser, the hole was displaced, and high weight returns (approx. 1.33 S.G.) from the cased plug was taken into reserve pit. Some of this mud was kept as kill mud and the remainder diluted and treated to give reserve volume of 1.18 S.G. mud.

After drilling 4 m of new hole a leak-off test at 1513 m gave an equivalent break-down of 1.54 S.G. Drilling ahead, continued until a drilling break at 1554 m; was circulated and coring commenced. Five cores were taken in all in the interval 1554 m; to 1628 m.

Mud for this section was run as a seawater/Drispac system with no further KCl/Ancopol additions necessary for inhibition. Additions of LF-5 were continuous to maintain a good filter cake through the sands of the reservoirsection and mud weight was maintained at a maximum of 1.18+ S.G. to reduce the chances of any differential sticking through this normaly pressured section.

After opening the hole from $8\frac{1}{2}$ " (core section), drilling of 12 1/4" hole continued to a T.D. of 1770 m. The hole was circulated clean and with no drag on PCOH, logging was started.

Testing was not required after the logging and cement plugs were then set prior to abandoning location.

36" HOLE SECTION

The drilling went as per program. No alterations to be made for this section.

26" HOLE SECTION

The drilling went as per program. No alterations to be made for this section.

17 1/2" HOLE SECTION

The drilling went very smooth in this section. The sticky formation seems to have been taken well care of by the KCl. However, a few tight spots occurred, and also, the logging tool did not get to bottom on the first run. This might be solved by increasing the mudweight slightly throughout the section.

Also, with the high penetration rae in this section, it would be advised a yield point in the 20-25 lbs/100ft range to secure a 100% hole cleaning. This is obtained by increasing the Drispac concentration to 2-2.5 lbs/bbl.

12 1/4" HOLE SECTION

This section went as per program with no severe problems and section costs well below programmed costs. No changes should be made for this section.
