

## NPD – exploration drilling result

24/08/2018 The Norwegian Petroleum Directorate has granted Mol Norge AS a drilling permit for well 2/6-6 S, cf. Section 15 of the Resource Management Regulations.

Well 2/6-6 S will be drilled from the Rowan Viking drilling facility in position 56°30'40.73"N and 3°54'49.22"E.

The drilling programme for well 2/6-6 relates to the drilling of a wildcat well in production licence 860. Mol Norge AS is the operator with an ownership interest of 40 per cent. The other licensees are Lundin Norway AS with 40 per cent and Petoro AS with 20 per cent.

The area in this licence consists of parts of blocks 2/6 and 9 and part of block 3/4. The well will be drilled about 40 kilometres northeast of the Valhall field.

[Production licence 860](#) was awarded on 10 February 2017 in APA 2016. This is the first well to be drilled in the licence.

The permit is contingent upon the operator securing all other permits and consents required by other authorities prior to commencing the drilling activity.

See [Factpages](#) for more information about this wellbore.

# Dry well at Mandal High in the southern part of the North Sea - 2/6-6 S

09/01/2019 MOL Norge AS, operator of production licence 860, is in the process of concluding the drilling of wildcat well 2/6-6 S.

The well has been drilled about 45 km east of the Valhall and Ekofisk fields and 20 km north of the Norwegian-Danish border in the Mandal High area.

The primary and secondary exploration targets for the well were to prove petroleum in reservoir rocks in the Paleocene and in the Permian (Intra Våle formation sandstone and the Rotliegend group, respectively).

The well encountered an approximately 34-metre thick sandstone layer in the Intra Våle formation with good reservoir quality. In the Rotliegend group, the well encountered 105 metres with relatively tight sandstone.

Extensive data acquisition and sampling have been carried out. The well is dry.

This is the first exploration well in [production licence 860](#). The licence was awarded in APA 2016.

Well 2/6-6 S was drilled to a vertical depth of 3576 metres and 3843 metres measured depth below the sea surface, and it was terminated in the Rotliegend group. Water depth at the site is 69 meters.

The well will now be permanently plugged and abandoned.

Well 2/6-6 S was drilled by the *Rowan Viking*.
