Description

Type	Text	Date updated
Development	Sygna is a field in the Tampen area in the northern North Sea, just northeast of the Statfjord Nord field. The water depth is 300 metres. Sygna was discovered in 1996, and the plan for development and operation (PDO) was approved in 1999. The field has been developed with one subsea template with four well slots, connected to the Statfjord C facility. Three production wells have been drilled from the template. A long-reach water injection well was drilled from the Statfjord Nord template. The production started in 2000.	13.12.2023
Reservoir	Sygna produces oil from Middle Jurassic sandstone in the Brent Group. The reservoir is at a depth of 2650 metres and has good quality.	09.12.2023
Recovery strategy	The field is produced by pressure maintenance from water injection.	28.02.2023

Transport	The well stream is transported by pipeline to the Statfjord C facility for processing, storage and export. Sygna, Statfjord Nord og Statfjord Øst have a shared process module on Statfjord C. The oil is loaded onto tankers and the gas is exported through Tampen Link and the Far North Liquids and Gas System (FLAGS) pipeline to the UK.	28.02.2023
Status	The production from Sygna is stable, and the strategy is to keep the reservoir pressure constant by water injection.	13.12.2023

Investments (expected)

The operators future investments related to the reservers from 2023 [mill NOK 2023-kroner]. The stated investment estimate has not been corrected for possible investment sharing.	254
