Description

Type	Text	Date updated
Development	Visund Sør is a field in the northern part of the North Sea, 10 kilometres northeast of the Gullfaks C platform. The water depth is 290 metres. Visund Sør was discovered in 2008, and the plan for development and operation (PDO) was approved in 2011. The field is developed with a subsea template tied to Gullfaks C. The production started in 2012.	14.12.2023
Reservoir	Visund Sør produces oil and gas from sandstone in the Middle Jurassic Brent Group and the Upper Triassic Statfjord Group. The reservoir depth is 2800-2900 metres.	14.12.2023
Recovery strategy	The field is produced by pressure depletion.	28.02.2023
Transport	The well stream is transported to Gullfaks C for processing and export.	28.02.2023
Status	The production started up again in September 2023 after a temporary shut-in due to low reservoir pressure and high water production. One new well was drilled in 2023 and is producing from the Statfjord reservoir. Start-up attempts have been made to get shut-in wells back to production.	14.12.2023

**Investments (expected)**

The operators future investments related to the reservers from 2023 [mill NOK 2023-kroner]. The stated investment estimate has not been corrected for possible investment sharing.	600
