Description

Type	Text	Date updated
Development	Gimle is a field in the northern part of the North Sea, just northeast of the Gullfaks field. The water depth is 220 metres. Gimle was discovered in 2004, and was granted exemption from the plan for development and operation (PDO) requirement in 2006. The field is developed with three production wells and one water injection well drilled from the Gullfaks C facility. The production started in 2006.	13.12.2023
Reservoir	Gimle produces oil from sandstone of Middle Jurassic age in the Brent Group. The main reservoir is in a downfaulted structure northeast of the Gullfaks field at a depth of 2900 metres. The reservoir quality is generally good. There is also oil in sandstone of Late Triassic and Early Jurassic age.	09.12.2023
Recovery strategy	The field is produced by partial pressure support from water injection. Injection is temporarily stopped due to production shut down.	28.02.2023

Transport	The production from Gimle is processed on the Gullfaks C facility and transported together with oil and gas from the Gullfaks field.	28.02.2023
Status	Gimle is temporarily shut down due to low reservoir pressure. A new well is planned to be drilled in 2023/2024 in the area between Gimle and Sindre fields. Gimle and Sindre have recently been merged into a unit called Brime.	09.12.2023
