Description

Type	Text	Date updated
Development	Gyda is a field in the southern part of the Norwegian sector in the North Sea, between the Ula and Ekofisk fields. The water depth is 65 metres. Gyda was discovered in 1980, and the plan for development and operation (PDO) was approved in 1987. The field was developed with a combined drilling, accommodation and processing facility with a steel jacket. The production started in 1990. A PDO for Gyda Sør was approved in 1993.	09.12.2023
Reservoir	Gyda produced oil from three reservoirs in Upper Jurassic sandstone of the Ula Formation. The reservoir depth is 4000 metres.	09.12.2023
Recovery strategy	The field was produced by water injection, as well as by pressure support from both gas cap and aquifer in parts of the field.	28.02.2023
Transport	The oil was transported to the Ekofisk field via the oil pipeline from Ula, and further via Norpipe to Teesside in the UK. The gas was transported in a dedicated pipeline to Ekofisk for further transport via Norpipe to Emden in Germany. Gas export ceased in 2016.	28.02.2023
Status	Gyda was shut down in 2020, and the facility was removed in 2022.	09.12.2023
