**Description**

Type	Text	Date updated
Development	Tor is a field in the southern part of the Norwegian sector in the North Sea, 13 kilometres northeast of the Ekofisk field. The water depth is 70 metres. Tor was discovered in 1970, and the plan for development and operation (PDO) was approved in 1973. The field started production in 1978 and was shut down in 2015. A new PDO for the redevelopment of Tor was approved in 2019. The development includes two subsea templates with eight horizontal production wells, tied-back to the Ekofisk Centre. The production started again in 2020.	14.12.2023
Reservoir	The reservoir contains oil and gas in chalk of Late Cretaceous age in the Tor Formation and of early Paleocene age in the Ekofisk Formation. The Ekofisk Formation is tighter and less fractured than the Tor Formation. There are significant remaining resources in both formations. The reservoir depth is 3200 metres.	21.01.2025
Recovery strategy	The field is produced by natural pressure depletion.	28.02.2023
Transport	The well stream is transported by pipeline to the processing facility at the Ekofisk Centre and further to Teesside in the UK and Emden in Germany.	28.02.2023
Status	Several of the wells have experienced higher water cut than anticipated. The original facility was removed in 2024.	21.01.2025

Investments (expected)

The operator's future investments related to the reserves from 2024 [mill NOK 2024-kroner]. The stated investment estimate has not been corrected for possible investment sharing.	278

Production - charts

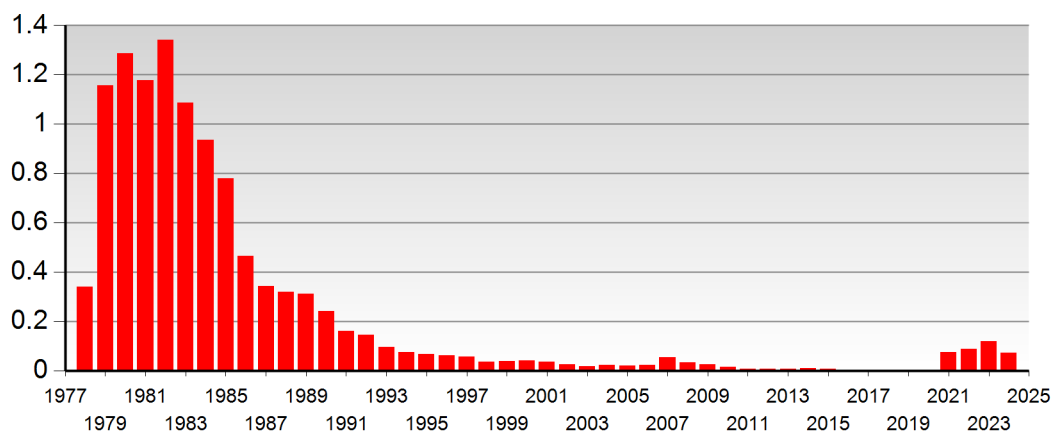

Net - oil equivalents [mill Sm3]

Net - oil [mill Sm3]

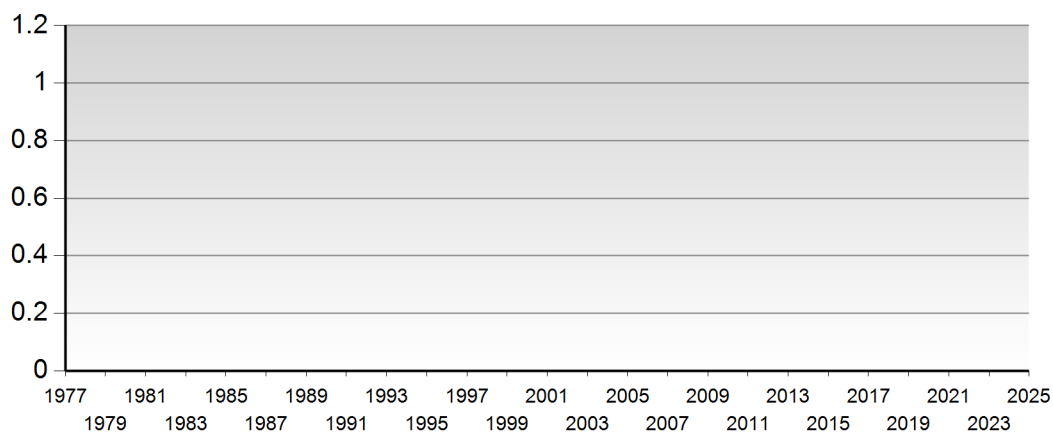

Net - gas [bill Sm3]

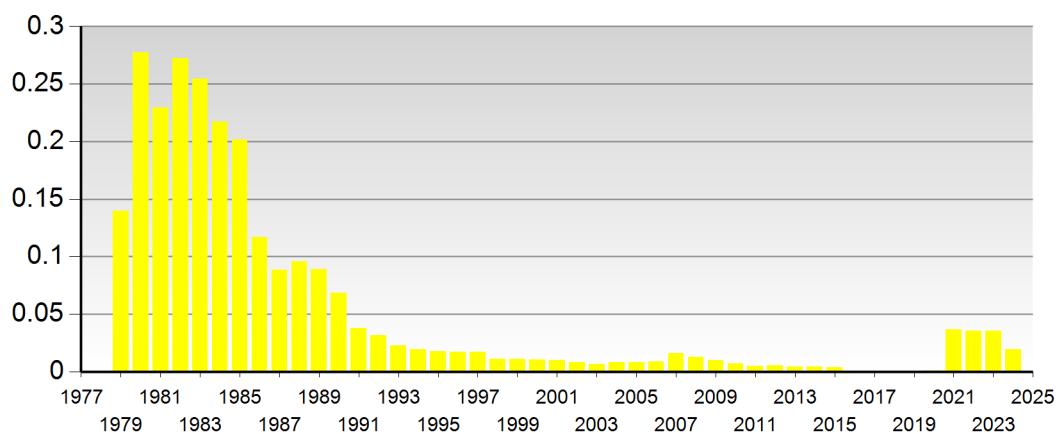

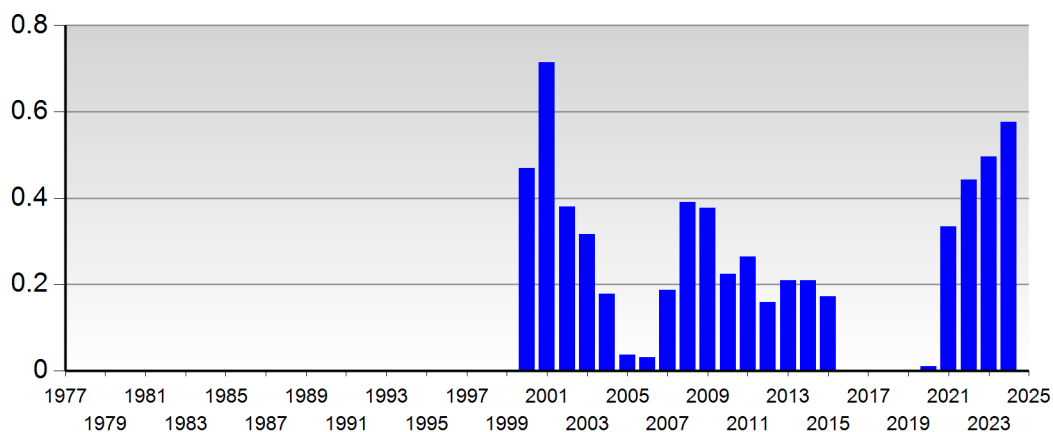

Net - condensate [mill Sm3]

Net - NGL [mill Sm3]

Produced water in field [mill Sm3]

Any produced water is only included after 1.1.2000

Wellbores - exploration

Wellbore name	Entered date	Completed date	Purpose	Status	Content
2/4-7	24.07.1971	08.10.1971	APPRAISAL	P&A	OIL
