Description

Type	Text	Date updated
Development	Statfjord Nord is a field in the Tampen area in the northern part of the North Sea, 17 kilometres north of the Statfjord field. The water depth is 250-290 metres. Statfjord Nord was discovered in 1977, and the plan for development and operation (PDO) was approved in 1990. The field has been developed with two production templates and one water injection template tied-back to the Statfjord C facility. The production started in 1995.	14.12.2023
Reservoir	Statfjord Nord produces oil from Middle Jurassic sandstone in the Brent Group and Upper Jurassic sandstone in the Munin Formation. The reservoirs are at a depth of 2600 metres and are of good quality.	14.12.2023
Recovery strategy	The field is produced with pressure maintenance from water injection.	28.02.2023
Transport	The well stream is transported in two pipelines to the Statfjord C facility for processing, storage and export. The fields Statfjord Nord, Statfjord Øst and Sygna have a shared process module on Statfjord C. Oil is loaded onto tankers and gas is exported through Tampen Link and the Far North Liquids and Gas System (FLAGS) pipeline to the UK.	28.02.2023

Status	The lifetime extension of the Statfjord C facility opens for additional wells for the field. One new well was drilled in 2022 and another is planned for 2024.	14.12.2023
