Description

Type	Text	Date updated
Development	Tune is a field in the northern part of the North Sea, ten kilometres west of the Oseberg field. The water depth is 95 metres. Tune was discovered in 1995, and the plan for development and operation (PDO) was approved in 1999. The field has been developed with a subsea template and a satellite well tied to the Oseberg Field Centre. Production started in 2002. A PDO exemption was granted for the development of the northern part of the field in 2004. A similar exemption was granted for the southern part of the field in 2005.	28.02.2023
Reservoir	Tune produces gas and some condensate mainly from Middle Jurassic sandstone in the Tarbert Formation (Brent Group). The reservoir is at a depth of 3400 metres and divided into several inclined fault blocks . Another reservoir is in the underlying Statfjord Formation.	14.12.2023
Recovery strategy	The field is produced by pressure depletion. Low-pressure production has been implemented.	28.02.2023

Transport	The well stream from Tune is transported in pipelines to the Oseberg Field Centre, where the condensate is separated and transported to the Sture terminal through the Oseberg Transport System (OTS). Gas from Tune is injected in the Oseberg field, while the licensees can export a corresponding volume of sales gas from Oseberg.	28.02.2023
Status	The Tune field is in its tail production phase and produces cyclically. The main challenges for Tune are old infrastructure and low reservoir pressure. There has been no production since mid-2022 due to well integrity issues.	14.12.2023

Investments (expected)

The operators future investments related to the reservers from 2023 [mill NOK 2023-kroner]. The stated investment estimate has not been corrected for possible investment sharing.	1

Production - charts

Net - oil [mill Sm3]

Net - gas [bill Sm3]

Net - condensate [mill Sm3]

Net - NGL [mill Sm3]

Produced water in field [mill Sm3]

Any produced water is only included after 1.1.2000

Wellbores - exploration
