Description

Sassendalen Group

Name

The group is named after a major valley in central Spitsbergen.

Type area

Sassendalen, central Spitsbergen.

Thickness

Up to 700 m in Svalbard, up to 1000 m on the Barents Sea Shelf.

Lithology

The Sassendalen Group comprises clastic sediments of Early and Middle Triassic age in Svalbard and on the Barents Sea Shelf. Dominant lithologies are shales and siltstones with subordinate sandstones and minor amounts of carbonate rocks.

Distribution

The group is exposed along the Tertiary fold-thrust belt on western Spitsbergen, in central and eastern Spitsbergen, as well as on Barentsøya, Edgeøya, southwestern Nordaustlandet and Bjørnøya. It continues in the subsurface between these islands southwards in the Barents Sea Shelf to the Hammerfest Basin.

Age

Early and Middle Triassic.

Depositional environment

The group represents coastal, deltaic to shallow shelf deposits in western Spitsbergen. These coastal sediments grade eastwards and southwards into shelf mudstones. The upper part is very organic-rich and phosphatic. In the southwestern Barents Sea Shelf shallow to deep shelf sediments were deposited. The Sassendalen Group represents a series of stacked transgressive-regressive successions, each formation being initiated by a regionally significant transgression (Mørk et al. 1989). These successions can also be traced across the Barents Sea Shelf to Arctic Canada and Eastern Siberia (Mørk et al. 1989; Egorov and Mørk, in press).

Subdivision

The subdivision into ten formations reflects the both lateral and vertical facies variations; there are three formations (Vardebukta, Tvillingodden and Bravaisberget formations) on western Spitsbergen, two (Vikinghøgda and Botneheia formations) in central and eastern Svalbard, one (Urd formation) on Bjørnøya, and one ([Steinkobbe Formation](#)) only documented on the Svalis Dome in the western Barents Sea. Three formations defined in the Hammerfest Basin ([Havert](#), [Klappmyss](#) and [Kobbe](#) formations) form the Ingøydjupet Subgroup.
