

**Generell informasjon**

Litostrat. enhet	KVITING FM
NPDID for litostrat. enhet	90
Nivå	FORMATION
Litostrat. enhet, forelder	NYGRUNNEN GP

Nivå under

Litostrat. enhet

Beskrivelse

Kviting Formation

Name

From the fish species *Merlangius merlangus* (whiting). The formation has not been differentiated previously.

Well type section

Well [7120/12-1](#) (Norsk Hydro), coordinates 71°06'48.7"N, 20°45'20.1"E, from 742 m to 725 m ([Fig 4.55](#)).

Well reference section

Well [7121/5-1](#) (Statoil), coordinates 71°35'54.88"N, 21°24'21.78"E, from 1036 m to 1005 m ([Fig 4.56](#)).

Thickness

17 m in the type well. 31 m in the reference well.

Lithology

The type section shows calcareous sandstones with interbedded sandy and glauconitic mudstones. Limestones in the reference well are interbedded with, and grade up into sandy claystones.

Basal Stratotype

The base is defined in the type well by log breaks showing a sharp fall in gamma response and interval transit time, and increasing density.

Lateral extent and variation

The unit is apparently restricted to central and eastern parts of the Hammerfest Basin.

Age

Campanian.

Depositional environment

Deep to shallow shelf environments with normal circulation are indicated.
