

**General information**

Wellbore name	30/9-B-18 A
Type	DEVELOPMENT
Purpose	PRODUCTION
Status	PLUGGED
Multilateral	NO
Factmaps in new window	<a href="#">link</a>
Main area	NORTH SEA
Field	<a href="#">OSEBERG</a>
Discovery	<a href="#">30/6-1 Oseberg</a>
Well name	30/9-B-18
Production licence	<a href="#">079</a>
Drilling operator	Norsk Hydro Produksjon AS
Drill permit	741-P
Drilling facility	OSEBERG B
Production facility	OSEBERG B
Drilling days	27
Entered date	27.09.1992
Completed date	23.10.1992
Release date	23.10.1994
Plugged date	14.10.2016
Publication date	12.09.2023
Purpose - planned	PRODUCTION
Content	OIL
Discovery wellbore	NO
1st level with HC, age	MIDDLE JURASSIC
1st level with HC, formation	OSEBERG FM
Kelly bushing elevation [m]	58.0
Water depth [m]	109.0
Total depth (MD) [m RKB]	4982.0
Final vertical depth (TVD) [m RKB]	2761.0
Maximum inclination [°]	93.4
Bottom hole temperature [°C]	106
Oldest penetrated age	MIDDLE JURASSIC
Oldest penetrated formation	NESS FM
Geodetic datum	ED50
NS degrees	60° 29' 36.31" N
EW degrees	2° 49' 43.22" E
NS UTM [m]	6706534.38

EW UTM [m]	490585.93
UTM zone	31
NPDID wellbore	2016

## Wellbore history

### General

Well 30/9-B-18 A is a production side-track from observation well 30/9-B-18 on the 30/9-1 Oseberg Discovery in the North Sea. The main objective for Well 30/9-B-18A was oil production from a planned 1200 metres horizontal section in the Oseberg, Etive and Lower Ness Formations.

The NSO-1 geochemical standard oil was produced from 30/9-B-18 A.

### Operations and results

Development well 30/9-B-18 A was kicked off at 3344 m in well 30/9-B-18 on 26 September 1992. It was drilled from the Oseberg B platform to TD at 4982 m (2761 m TVD) m in the Middle Jurassic Ness Formation. The target of the well was on the Oseberg Alpha Structure approximately 3 km south-east of the Oseberg B platform. It was drilled horizontally (between 88 and 93 deviation) from ca 3850 m in the Oseberg Formation To TD at 4982 m in the Ness Formation. The well was drilled with oil based Safemul mud from kick-off to TD.

Total drilled length of Oseberg, Etive and Lower Ness in the horizontal well is ca 1130 m, in line with the prognosed 1200 metres.

No cores were cut in this well. No wireline pressures were taken, and no wireline fluid sample was taken.

The well was completed as a producer on 8 December 1992.

### Testing

The well was completed with 15 perforation intervals between 3831 m and 4912 m (2762.2 m TVD and 2759.5 m TVD) in the horizontal sections in the lower Ness and Oseberg-Rannoch-Etive (ORE) formations. Production testing measured flow rates between 2510 and 2640 Sm<sup>3</sup>/day. Static pressure was 267.68 bar. Initial formation temperature at top perforations was 106.5 C.

On 25 June 1994 ca 1200 litres of depressurized oil was produced, bottled and shipped to the NPD, where it is available as the North Sea Oil-1 (NSO-1) analytical standard for geochemical analysis. Further information about the oil is available upon application to the NPD.
