## Wellbore history

### General

Well 1/9-6 SR is a re-entry of well 1/9-6 S on the north-west flank of the Tommeliten Gamma structure in the Feda Graben in the southern North Sea. Well 1/9-6 S was suspended in December 1984 as a possible producer for the Tommeliten Gamma. The objective of the re-entry was plugging.

### Operations and results

Well 1/9-6 S was re-entered with the semi-submersible installation Ross Rig on 6 April 1991.

The well was plugged and permanently abandoned on 20 April 1991.

### Testing

No drill stem test was performed.
