

General information

Wellbore name	6204/10-2
Type	EXPLORATION
Purpose	WILDCAT
Status	P&A
Factmaps in new window	link to map
Main area	NORWEGIAN SEA
Well name	6204/10-2
Seismic location	ST 9202- INLINE 208 & X-LINE 1364
Production licence	175
Drilling operator	Den norske stats oljeselskap a.s
Drill permit	872-L
Drilling facility	DEEPSEA TRYM
Drilling days	25
Entered date	19.01.1997
Completed date	12.02.1997
Release date	12.02.1999
Publication date	29.05.2002
Purpose - planned	WILDCAT
Reentry	NO
Content	DRY
Discovery wellbore	NO
Kelly bushing elevation [m]	25.0
Water depth [m]	172.0
Total depth (MD) [m RKB]	1145.0
Final vertical depth (TVD) [m RKB]	1145.0
Maximum inclination [°]	0.9
Bottom hole temperature [°C]	58
Oldest penetrated age	PALEOCENE
Oldest penetrated formation	SELE FM
Geodetic datum	ED50
NS degrees	62° 2' 41.24" N
EW degrees	4° 7' 4.59" E
NS UTM [m]	6879839.00
EW UTM [m]	558469.64
UTM zone	31
NPID wellbore	2952

Wellbore history

General

The main objectives for well 6204/10-2 was to prove economic hydrocarbon reserves in the Jurassic L-prospect and in the Coniacian/Turonian Q-prospect, while secondary objective was to investigate possible hydrocarbons in fractured basement.

Operations and results

The 6204/10-2 well was spudded with the semi-submersible rig "Deepsea Trym" on 19 January 1997 and drilled to a temporary TD at 1145 m, where the well was temporarily abandoned on 21 November due to environmental restrictions. Well 6204/10-2 R was re-entered on 4 November 1997, and was drilled to TD at 2095 m. The well bores were drilled with a water based KCl polymer system, however, standard geochemical analyses indicate unknown additives that may affect geochemical analyses. No special drilling/operational problems were experienced in this well.

The well showed that the Jurassic section was missing, and there were no hydrocarbons in the basement. The only hydrocarbons encountered were in a thin Lower Cretaceous sandstone stringer, where a segregated FMT sample at 1915.5 m gave a good sample from a porous sandstone. Two cores were cut: one at 1872 - 1889.55 m in Upper Cretaceous and one at 1951 - 1961.14 m in Lower Cretaceous. The well was plugged and abandoned on 21 November 1997 as a gas discovery.

Testing

No drill stem test was performed.

Cuttings at the Norwegian Offshore Directorate

Cutting sample, top depth [m]	Cutting samples, bottom depth [m]
310.00	2095.00
Cuttings available for sampling?	YES
