## Wellbore history

### General

Well 34/10-34 discovered oil in the Middle Jurassic Tarbert Formation in 1991. The well was suspended as a possible future producer. In 1993 the discovery, called Gullfaks Vest, was included in the larger Gullfaks Field and production from the Gullfaks B platform was initiated. The objective of the re-entry 34/10-34 R was plugging and permanent abandonment.

### Operations and results

Well R4/10-34 was re-entered (34/10-34 R) with the semi-submersible installation Transocean Wildcat on 6 October 2001.

The well was plugged and permanently abandoned on 16 October 2001.

### Testing

No drill stem test was performed
