

## General information

Wellbore name	6407/7-8 A
Type	EXPLORATION
Purpose	APPRAISAL
Status	P&A
Press release	<a href="#">link to press release</a>
Factmaps in new window	<a href="#">link to map</a>
Main area	NORWEGIAN SEA
Discovery	<a href="#">6407/7-8 (Noatun)</a>
Well name	6407/7-8
Seismic location	3D survey NH9806M-line 1366 & trace 2881
Production licence	<a href="#">107</a>
Drilling operator	StatoilHydro Petroleum AS
Drill permit	1205-L
Drilling facility	<a href="#">WEST ALPHA</a>
Drilling days	52
Entered date	14.09.2008
Completed date	05.11.2008
Release date	05.11.2010
Publication date	05.11.2010
Purpose - planned	APPRAISAL
Reentry	NO
Content	GAS/CONDENSATE
Discovery wellbore	NO
1st level with HC, age	MIDDLE JURASSIC
1st level with HC, formation	FANGST GP
2nd level with HC, age	EARLY JURASSIC
2nd level with HC, formation	ÅBT GP
Kelly bushing elevation [m]	18.0
Water depth [m]	293.0
Total depth (MD) [m RKB]	5227.0
Final vertical depth (TVD) [m RKB]	5068.0
Maximum inclination [°]	33.3
Oldest penetrated age	EARLY JURASSIC
Oldest penetrated formation	ÅRE FM
Geodetic datum	ED50
NS degrees	64° 25' 49.3" N
EW degrees	7° 7' 38.5" E

NS UTM [m]	7146478.78
EW UTM [m]	409822.02
UTM zone	32
NPDID wellbore	5953

## Wellbore history

### General

The 6407/7-8 A is a sidetrack to the 6407/7-8 Noatun well, which discovered gas/condensate in the Fangst and Båt Groups. The well is located in the Gimsan Basin, ca 15 km north of the Njord Field in the Norwegian Sea. The main objective of the sidetrack well was to prove economical hydrocarbon volumes in the structure and, if possible, to define the hydrocarbon/water contact.

### Operations and results

Well 6407/7-8 A was sidetracked from the main well on 14 September 2008 with a kick-off point at 3900 m. It was drilled from the semi-submersible installation West Alpha to TD at 5227 m (5067.7 m TVD) in the Early Jurassic Åre Formation. The well was drilled with Versatherm oil based mud from kick-off to TD.

The well confirmed gas condensate in the Fangst and Båt Groups as in the main well. No hydrocarbon/water contact was encountered. Gas readings were high in the Spekk Formation and in the reservoir sections as in the main well. No oil shows were recorded.

No cores were cut and no wire line fluid samples were taken.

The well was permanently abandoned on 5 November 2008 as a gas/condensate appraisal well.

### Testing

No drill stem test was performed.

## Cuttings at the Norwegian Offshore Directorate

Cutting sample, top depth [m]	Cutting samples, bottom depth [m]
3910.00	5226.00
Cuttings available for sampling?	YES

## Lithostratigraphy

### Pressure plots

The pore pressure data is sourced from well logs if no other source is specified. In some wells where pore pressure logs do not exist, information from Drill stem tests and kicks have been used. The data has been reported to the NPD, and further processed and quality controlled by IHS Markit.
