

## General information

Wellbore name	35/9-6 S
Type	EXPLORATION
Purpose	WILDCAT
Status	P&A
Press release	<a href="#">link to press release</a>
Factmaps in new window	<a href="#">link to map</a>
Main area	NORTH SEA
Discovery	<a href="#">35/9-6 S</a>
Well name	35/9-6
Seismic location	NH9202RD07:inline 2041 & crossline 3763
Production licence	<a href="#">420</a>
Drilling operator	RWE Dea Norge AS
Drill permit	1320-L
Drilling facility	<a href="#">BREDFORD DOLPHIN</a>
Drilling days	70
Entered date	29.09.2010
Completed date	07.12.2010
Release date	07.12.2012
Publication date	07.12.2012
Purpose - planned	WILDCAT
Reentry	NO
Content	OIL/GAS
Discovery wellbore	YES
1st level with HC, age	LATE JURASSIC
1st level with HC, formation	INTRA HEATHER FM SS
2nd level with HC, age	MIDDLE JURASSIC
2nd level with HC, formation	BRENT GP
3rd level with HC, age	EARLY JURASSIC
3rd level with HC, formation	DUNLIN GP
Kelly bushing elevation [m]	25.0
Water depth [m]	369.0
Total depth (MD) [m RKB]	3740.0
Final vertical depth (TVD) [m RKB]	3689.0
Maximum inclination [°]	29.3
Bottom hole temperature [°C]	125
Oldest penetrated age	LATE TRIASSIC
Oldest penetrated formation	LUNDE FM
Geodetic datum	ED50

NS degrees	61° 22' 16.29" N
EW degrees	3° 41' 33.54" E
NS UTM [m]	6804492.08
EW UTM [m]	537025.98
UTM zone	31
NPDID wellbore	6429

## **Wellbore history**

## General

Well 35/9-6 S was drilled on the Titan Prospect on the Måløy slope in the northern North Sea close to several hydrocarbon discoveries. The most important of these are the Gjøa field to the east and Aurora and Vega to the west. The objective was to test four target levels in the Jurassic with the Tarbert and Etive formations as primary targets and Callovian Intra Heather Formation sandstone and Cook Formation sandstone as secondary targets.

## Operations and results

Wildcat well 35/9-6 S was spudded with the semi-submersible installation Bredford Dolphin on 29 September and drilled to TD at 3740 m (3689 m TVD) in Late Triassic sediments of the Lunde Formation. The well was drilled with Seawater with Hi-Vis Sweeps down to 465.5 m, with KCl/GEM mud (3-5 % glycol) from 465.5 m to 1723 m, with Performadril mud (3-5 % glycol) from 1723 m to 2925 m, and with Performadril HT mud (3-5 % glycol) from 2925 m to TD.

Oil and Gas-Condensate, was encountered over a gross column of 434 meters in the Viking, Brent and Dunlin Groups. Hydrocarbons were proven in 5 different stratigraphic levels:

- Intra Heather Formation sandstone of Callovian age with top at 3256.9 m (3206.4 m TVD) contained oil
- Tarbert Formation with top at 3426.6 m (3376.1 m TVD) contained oil
- Etive Formation with top at 3505.5 m (3455 m TVD) contained gas-condensate
- Intra Drake Formation sandstone layers with top Drake Formation at 3552.3 m (3501.7 m TVD) contained gas-condensate
- Cook Formation with top at 3624.5 m (3573.8 m ) contained gas-condensate

No oil shows were reported above BCU.

Seven conventional cores were taken in the well. Cores 1 to 4 were cut in the Heather Formation from 3266 m to 3318.5 m. These cores are shifted -1.5 m, -2.85 m, -2.45 m, and -1.65 m relative to logger's depth, respectively. Core 5 was cut from 3434 m to 3461 m in the Tarbert Formation; core 6 was cut from 3517 m to 3560 m in the Etive and Rannoch formations; and core 7 was cut from 3679 m to 3695 m in the Cook Formation. The core-log shifts for cores 5, 6, and 7 were 0.0 m, -0.9 m, and -0.95 m, respectively. MDT fluid samples were taken at 3258.93 m in Intra Heather Formation SST(oil), 3484.84 m in the Tarbert Formation (oil), 3512.32 m in the Etive Formation (retrograde gas), at 3592.1 m in the Drake Formation (retrograde gas), and at 3658.85 m in the Cook Formation (volatile oil).

The well was permanently abandoned on 7 December 2010 as an oil and gas discovery.

## Testing

No drill stem test was performed.
