|------------------------------------|--|
| Wellbore name | 33/12-10 S |
| Type | EXPLORATION |
| Purpose | WILDCAT |
| Status | P&A |
| Press release | link to press release |
| Factmaps in new window | link to map |
| Main area | NORTH SEA |
| Well name | 33/12-10 |
| Seismic location | WIN0901LNR13:inline 691 crossline 1453 |
| Production licence | 631 |
| Drilling operator | Lundin Norway AS |
| Drill permit | 1525-L |
| Drilling facility | BREDFORD DOLPHIN |
| Drilling days | 55 |
| Entered date | 30.08.2014 |
| Completed date | 23.10.2014 |
| Release date | 05.07.2016 |
| Publication date | 05.07.2016 |
| Purpose - planned | WILDCAT |
| Reentry | NO |
| Content | DRY |
| Discovery wellbore | NO |
| Kelly bushing elevation [m] | 25.0 |
| Water depth [m] | 140.0 |
| Total depth (MD) [m RKB] | 3097.0 |
| Final vertical depth (TVD) [m RKB] | 3089.2 |
| Maximum inclination [°] | 7.8 |
| Oldest penetrated age | MIDDLE JURASSIC |
| Oldest penetrated formation | HEATHER FM |
| Geodetic datum | ED50 |
| NS degrees | 61° 7' 7.83" N |
| EW degrees | 1° 56' 28.67" E |
| NS UTM [m] | 6776647.02 |
| EW UTM [m] | 442952.09 |
| UTM zone | 31 |
| NPID wellbore | 7486 |

Wellbore history

General

Well 33/12-10 S was drilled to test the Vollgrav prospect, between the Gullfaks Sør Field and the UK border in the Tampen Spur area of the North Sea. The primary objective of the well was to prove the reservoir potential and hydrocarbons in an untested Late Jurassic depositional wedge of Draupne Formation sandstone, Munin and Magnus members, seen in the Borg Field to the north of the prospect. The secondary objective of the well was to test the reservoir and hydrocarbon potential of the overlaying injectite embedded in sediments of early Eocene age. The TD criterion was to drill to approximately 3075 m, into the Late Jurassic Heather Formation.

Operations and results

Wildcat well 33/12-10 S was spudded with the semi-submersible installation Bredford Dolphin on 30 August 2014 and drilled to TD at 3097 m (3089 m TVD) m in the Late Callovian sediments belonging to the Heather Formation. No significant problem was encountered in the operations. The well was drilled with seawater and hi-vis sweeps down to 454.5 m and with Aquadril mud from 454.5 m to TD.

The Draupne Formation interval was encountered at 2944 m (2936 m TVD), 40 m deep to prognosis. The prognosed Intra Draupne Formation sandstones were not present in the well. Sandstone was found in the secondary Eocene target at 1686.5 m (1686.3 m TVD) but these did not show any signs of hydrocarbons. Fluorescence was described in limestones in a thin Cromer Knoll Group overlying the Viking Group, and throughout the shales of the Viking Group. No real oil show in permeable lithology was recorded in the well.

A total of 32.2 m core was cut in the interval 2938 m to 2970.5 m with 99.1% total recovery. No logs were run on wireline due to dry hole. No fluid samples were taken.

The well was permanently abandoned on 23 October 2014 as a dry well.

Testing

No drill stem test was performed.

Cuttings at the Norwegian Offshore Directorate

| Cutting sample, top depth [m] | Cutting samples, bottom depth [m] |
|----------------------------------|-----------------------------------|
| 460.00 | 3096.00 |
| Cuttings available for sampling? | YES |

Cores at the Norwegian Offshore Directorate

| Core sample number | Core sample - top depth | Core sample - bottom depth | Core sample depth - uom |
|--------------------|-------------------------|----------------------------|-------------------------|
| 1 | 2938.0 | 2938.5 | [m] |

| | | | |
|---|--------|--------|------|
| 2 | 2938.5 | 2943.3 | [m] |
| 3 | 2943.5 | 2970.4 | [m] |

| | |
|-------------------------------|------|
| Total core sample length [m] | 32.2 |
| Cores available for sampling? | YES |
