

### General information

Wellbore name	30/6-29 S
Type	EXPLORATION
Purpose	WILDCAT
Status	RE-CLASS TO DEV
Factmaps in new window	<a href="#">link to map</a>
Main area	NORTH SEA
Field	<a href="#">OSEBERG</a>
Discovery	<a href="#">30/6-29 S (Alfa Nord Cook)</a>
Well name	30/6-29
Seismic location	
Production licence	<a href="#">053</a>
Drilling operator	Statoil Petroleum AS
Drill permit	1603-L
Drilling facility	<a href="#">OSEBERG C</a>
Drilling days	57
Entered date	06.01.2015
Completed date	03.03.2015
Release date	03.03.2017
Publication date	15.03.2017
Purpose - planned	WILDCAT
Reclassified to wellbore	<a href="#">30/6-C-8 D</a>
Reentry	NO
Content	OIL
Discovery wellbore	YES
1st level with HC, age	EARLY JURASSIC
1st level with HC, formation	COOK FM
Kelly bushing elevation [m]	62.0
Water depth [m]	109.0
Total depth (MD) [m RKB]	5765.0
Final vertical depth (TVD) [m RKB]	2839.0
Maximum inclination [°]	90.2
Oldest penetrated age	EARLY JURASSIC
Oldest penetrated formation	EIRIKSSON FM
Geodetic datum	ED50
NS degrees	60° 36' 29.43" N
EW degrees	2° 46' 33.76" E
NS UTM [m]	6719324.70
EW UTM [m]	487737.66

UTM zone	31
NPDID wellbore	7801

## Wellbore history

### General

Well 30/6-29 S is an exploration well that is reclassified from development well 30/6-C-8 DT2. The exploration target was the Alpha Nord Cook prospect underlying the northern part of the Oseberg reservoir. The primary objective was to determine presence of hydrocarbons in the Cook and Eiriksson formations. The secondary objective was to test presence of hydrocarbons in a sandstone which is believed to be re-deposited Brent sandstone on-lapping the Base Cretaceous Unconformity. An equivalent or similar sandstone is penetrated also in wells 30/6-16, 30/6-17 A, 30/6-17 R and in development well 30/6-C21 AT2.

Given a discovery, the well would produce the Alpha Nord Cook.

### Operations and results

Wildcat well 30/6-29 S was kicked off on 6 January 2015 from a whipstock in the 9 5/8" liner at 3096 m in development well 30/6-C-8 C. It was drilled with Versatec oil based mud all through.

After drilling horizontally through the Shetland Group for about 2.3 km the well drilled into the secondary target sandstone sequence at 5360 m (2484.3 m TVD MSL). It was oil-bearing with an OWC at 5383.7 m (2498 m TVD MSL). A single pressure point taken in this sandstone indicated pressure depletion and communication with the Oseberg Brent reservoir. The primary target Cook Formation was encountered at 5534 m (2595.5 m TVD MSL). It was oil-bearing down to the OWC at 5562 m (2615.5 m TVD MSL), giving an oil column of 20 m. Pressure points showed an oil gradient with initial un-depleted pressure. The Eiriksson Formation was water bearing. No shows analysis is performed in the well.

No cores were cut and no fluid sample was taken. Well 30/6-29 S was completed 3 March 2015 as an oil discovery.

### Testing

No Drill stem test was performed in the 30/6-29 S.

## Lithostratigraphy
