

### General information

Wellbore name	30/4-3 S
Type	EXPLORATION
Purpose	WILDCAT
Status	RE-CLASS TO DEV
Press release	<a href="#">link to press release</a>
Factmaps in new window	<a href="#">link to map</a>
Main area	NORTH SEA
Field	<a href="#">MARTIN LINGE</a>
Discovery	<a href="#">30/4-3 S</a>
Well name	30/4-3
Seismic location	
Production licence	<a href="#">043</a>
Drilling operator	Total E&P Norge AS
Drill permit	1623-L
Drilling facility	<a href="#">MAERSK INTREPID</a>
Drilling days	116
Entered date	16.06.2016
Completed date	09.10.2016
Release date	09.10.2018
Publication date	09.10.2018
Purpose - planned	WILDCAT
Reclassified to wellbore	<a href="#">30/4-A-9</a>
Reentry	NO
Content	GAS/CONDENSATE
Discovery wellbore	YES
1st level with HC, age	MIDDLE JURASSIC
1st level with HC, formation	TARBERT FM
2nd level with HC, age	MIDDLE JURASSIC
2nd level with HC, formation	NESS FM
3rd level with HC, age	EOCENE
3rd level with HC, formation	FRIGG FM
Kelly bushing elevation [m]	57.7
Water depth [m]	115.0
Total depth (MD) [m RKB]	4605.0
Final vertical depth (TVD) [m RKB]	4201.0
Maximum inclination [°]	36.9
Oldest penetrated age	EARLY JURASSIC
Oldest penetrated formation	DUNLIN GP

Geodetic datum	ED50
NS degrees	60° 30' 22.44" N
EW degrees	2° 0' 53.37" E
NS UTM [m]	6708354.28
EW UTM [m]	445889.57
UTM zone	31
NPDID wellbore	7961

## Wellbore history

### General

Well 30/4-3 S was drilled to test the Herja prospect North-East of the Martin Linge development area located between Martin Linge Central (30/7-8 R) and Martin Linge East (30/4-2) discoveries in the North Sea. The primary objective was to prove hydrocarbon accumulations within the Middle Jurassic Brent sandstones.

### Operations and results

Wildcat well 30/4-3 S was spudded with the jack-up installation Mærsk Intrepid on 16 June 2016 and drilled to TD at 4605 m (4201 m TVD) m in the Early Jurassic Dunlin Group. Operations proceeded without significant problems. The well was drilled with seawater and bentonite sweeps down to 258 m, with Sildril water-based mud from 258 m to 1219 m, with Glydril water-based mud from 1219 m to 2225 m, with NABM EMS 4600 oil-based mud from 2225 m to 4144 m, and with WARP NABM mud from 4144 m to TD.

The well confirmed oil in the Eocene Frigg Formation, from top of the Frigg sandstone at 1829 m (1810 m TVD) down to the free water level at 1835 m (1815 m TVD). Top of the primary exploration target Brent Group was penetrated at 4250 m. Good quality reservoirs were encountered within the Tarbert, Ness and Etive Formations. Tarbert and Ness were found to be gas bearing, while the Etive Formation was water bearing. XPT pressure points showed a gas down to situation at 4377m (4004 m TVD) at base Tarbert. Both Tarbert and Ness show gas gradients, but Ness is 10 bar overpressured compared to Tarbert. Hydrocarbon shows in this well were not described, due to masking by the mud (NABM) and the loose sand in Frigg Formation.

No conventional cores were cut. MDT fluid samples were taken at 4253 m (gas), 4337.4 m (gas), 4459.9 m (gas), 4495 m (gas), and 4552.5 m (water).

The well was permanently abandoned on 9 October 2016 as a gas-condensate discovery.

### Testing

No drill stem test was performed.
