

General information

Wellbore name	35/12-6 A
Type	EXPLORATION
Purpose	APPRAISAL
Status	P&A
Press release	link to press release
Factmaps in new window	link to map
Main area	NORTH SEA
Discovery	35/12-6 S (Kallåsen)
Well name	35/12-6
Seismic location	Inline 8469/8470. Xline 28650
Production licence	925
Drilling operator	Wellesley Petroleum AS
Drill permit	1704-L
Drilling facility	TRANSOCEAN ARCTIC
Drilling days	16
Entered date	15.06.2018
Completed date	30.06.2018
Plugged and abondon date	30.06.2018
Release date	30.06.2020
Publication date	30.06.2020
Purpose - planned	APPRAISAL
Reentry	NO
Content	DRY
Discovery wellbore	NO
Kelly bushing elevation [m]	24.0
Water depth [m]	355.0
Total depth (MD) [m RKB]	3263.0
Final vertical depth (TVD) [m RKB]	2993.0
Maximum inclination [°]	40.9
Oldest penetrated age	MIDDLE JURASSIC
Oldest penetrated formation	HEATHER FM
Geodetic datum	ED50
NS degrees	61° 13' 45.08" N
EW degrees	3° 45' 25.28" E
NS UTM [m]	6788712.72
EW UTM [m]	540650.26
UTM zone	31
NPID wellbore	8488

Wellbore history

General

Well 35/12-6 A is a geological side-track to well 35/12-6 S on the Uer Terrace south-east of the 35/9-7 Nova discovery in the North Sea. Well 35/12-6 S found oil in the Fensfjord Formation, but the oil-water contact could not be established. The objective of the side-track well was to drill down-dip on the structure to delineate the oil accumulation.

Operations and results

Appraisal well 35/12-6 A was kicked off at 1059 m in well 35/12-6 S on 15 June 2018. It was drilled with the semi-submersible installation Transocean Arctic to TD at 3263 m (2993 m TVD) in Callovian age sediments in the Heather Formation. Operations proceeded without significant problems. The well was drilled with Innovert oil-based mud from kick-off to TD.

Well 35/12-6 A encountered top Fensfjord Formation at 3157 m (2906 m TVD). Fensfjord was 42.3 m TVD thick and was very heterolithic with only 6.9 m net water-bearing reservoir of moderate quality. No oil shows were observed in the well. Evaluation of the combined data from the main bore and the side-track (pressures, cores and logs) suggest an OWC between 2854.4 and 2866 m TVD, so the well penetrated Fensfjord below the OWC.

No cores were cut in 35/12-6 A. MDT water samples were taken at 3199.2 m and 3211.8 m.

The well was permanently abandoned on 30 June 2018 as a dry appraisal well.

Testing

No drill stem test was performed.
