

General information

Wellbore name	35/11-21 S
Type	EXPLORATION
Purpose	APPRAISAL
Status	P&A
Press release	link to press release
Factmaps in new window	link to map
Main area	NORTH SEA
Discovery	35/12-2 (Grosbeak)
Well name	35/11-21
Seismic location	Inline: 8175. Xline: 28062
Production licence	248 I
Drilling operator	Wellesley Petroleum AS
Drill permit	1718-L
Drilling facility	TRANSOCEAN ARCTIC
Drilling days	41
Entered date	26.07.2018
Completed date	05.09.2018
Plugged date	05.09.2018
Release date	05.09.2020
Publication date	05.09.2020
Purpose - planned	WILDCAT
Reentry	NO
Content	OIL
Discovery wellbore	NO
1st level with HC, age	MIDDLE JURASSIC
1st level with HC, formation	NESS FM
2nd level with HC, age	MIDDLE JURASSIC
2nd level with HC, formation	ETIVE FM
Kelly bushing elevation [m]	24.0
Water depth [m]	360.0
Total depth (MD) [m RKB]	2800.0
Final vertical depth (TVD) [m RKB]	2588.0
Maximum inclination [°]	44.42
Bottom hole temperature [°C]	103
Oldest penetrated age	EARLY JURASSIC
Oldest penetrated formation	COOK FM
Geodetic datum	ED50
NS degrees	61° 9' 28.17" N

EW degrees	3° 38' 56.48" E
NS UTM [m]	6780701.21
EW UTM [m]	534929.97
UTM zone	31
NPDID wellbore	8533

Wellbore history

General

Well 35/11-21 S was drilled to appraise the 35/12-2 Grosbeak discovery on the Ryggsteinen Ridge in the North Sea. The primary objective was to explore the reservoir potential of the Ness Formation and to prove oil in the Etive Formation.

Operations and results

Appraisal well 35/11-21 S was spudded with the semi-submersible installation Transocean Arctic on 26 July 2018 and drilled to TD at 2800 m (2588 m TVD) m in the Early Jurassic Cook Formation. Operations proceeded without significant problems. The well was drilled with seawater and bentonite sweeps down to 449 m, with KCl/polymer/GEM mud from 449 to 996 m, and with Innovert NS oil-based mud from 996 m to TD.

Top of Brent Group, Ness Formation was penetrated at 2595.2 m (2383 m TVD). The Ness and Etive formations were oil-bearing down to top Rannoch Formation at 2686 m (2474 m TVD). Of this ca 90 m oil column 45 m was effective reservoir sandstone with good to very good reservoir properties. In addition to shows in Ness-Etive, there were oil shows in Rannoch Formation sandstone, described as very weak patchy pale yellow direct fluorescence, very slow, very weak, blue white to pale yellow cut fluorescence, weak, pale yellow fluorescent residue. Otherwise there were no shows in the well.

Three 54 m cores were cut from 2566 to 2620.9 m, from 2620.90 to 2675.4 m, and from 2675.4 to 2729.8 m. Each core was cut with 100% recovery. MDT fluid samples were taken at 2615.5 m (oil), 2634.49 m (oil), 2657.54 m (oil), 2681 m (oil), and 2698.5 m (water).

The well was permanently abandoned on 5 September 2018 as an oil appraisal well.

Testing

A formation production test (DST) from 2625 to 2637 m in the Ness Formation was performed. The test produced 825 Sm³ oil and 92517 Sm³ gas /day through a 46/64" choke in the main flow. The GOR was 112 Sm³/Sm³. The gas contained 1.3% CO₂ and 1.9% H₂S. The DST temperature was 97°C.

Cuttings at the Norwegian Offshore Directorate

Cutting sample, top depth [m]	Cutting samples, bottom depth [m]
