

## General information

Wellbore name	6507/4-2 S
Type	EXPLORATION
Purpose	WILDCAT
Status	P&A
Press release	<a href="#">link to press release</a>
Factmaps in new window	<a href="#">link to map</a>
Main area	NORWEGIAN SEA
Field	<a href="#">DVALIN</a>
Discovery	<a href="#">6507/4-2 S (Dvalin Nord)</a>
Well name	6507/4-2
Seismic location	
Production licence	<a href="#">211</a>
Drilling operator	Wintershall Dea Norge AS
Drill permit	1847-L
Drilling facility	<a href="#">DEEPSEA ABERDEEN</a>
Drilling days	89
Entered date	20.02.2021
Completed date	19.05.2021
Plugged and abandon date	19.05.2021
Release date	19.05.2023
Publication date	12.09.2023
Purpose - planned	WILDCAT
Reentry	NO
Content	OIL/GAS/CONDENSATE
Discovery wellbore	YES
1st level with HC, age	MIDDLE JURASSIC
1st level with HC, formation	GARN FM
2nd level with HC, age	LATE CRETACEOUS
2nd level with HC, formation	LANGE FM
3rd level with HC, age	LATE CRETACEOUS
3rd level with HC, formation	LYSING FM
Kelly bushing elevation [m]	32.0
Water depth [m]	450.0
Total depth (MD) [m RKB]	4485.0
Final vertical depth (TVD) [m RKB]	4430.0
Maximum inclination [°]	16.7
Bottom hole temperature [°C]	162
Oldest penetrated age	EARLY JURASSIC

Oldest penetrated formation	ROR FM
Geodetic datum	ED50
NS degrees	65° 32' 23.77" N
EW degrees	7° 11' 22.41" E
NS UTM [m]	7270017.61
EW UTM [m]	416357.57
UTM zone	32
NPDID wellbore	9251

## Wellbore history

### General

Well 6507/4-2 S was drilled to test the Dvalin prospect on the Revfallet Fault Complex between the Victoria and rflugl discoveries in the Norwegian Sea. The primary objective for the well was to prove hydrocarbons in the Middle Jurassic Garn Formation in the Fangst Group. The secondary objectives were to prove hydrocarbons in the Cretaceous Lysing and Lange Formations.

### Operations and results

Wildcat well 6507/4-2 S was spudded with the semi-submersible installation Deepsea Aberdeen on 20 February 2021 and drilled to TD at 4485 m (4430 m TVD) m in the early Jurassic Ror Formation. Non-production time was 19.7 days (22%) mainly due to ruptured BOP control Multiplex cable during a WOW period. This occurred during logging operations in the 8 1/2" section. The well was drilled with seawater and hi-vis pills down to 1500 m and with Innovert NS oil-based mud from 1500 m to TD.

The well proved gas in the Garn Fm, with no proven gas-water contact, it proved gas/condensate in the Lysing Fm with gas-water contact at 2923.5 m (2915 m TVD), and it proved gas and oil in four differently pressured sand layers in the Lange Fm. No hydrocarbon contacts were identified in the Lange Formation. Shows were observed in the hydrocarbon bearing sands in the Lange and Garn formations. The deepest show in the Garn Formation was at 4363 m. In the Lysing Formation no shows were observed.

Three cores were cut in succession from 4262.4 to 4326.7 m in the Garn Formation. Total recovery was 100%. MDT fluid samples were taken in the Lysing Formation at 2897.5 m (gas condensate), 2909.2 (gas condensate) and 2961.5 m (water), in the Lange Formation at 3597.6 m (wet gas), 3701.6 m (oil) and 3822.3 m (oil), and in the Garn Formation at 4264 m (wet gas), 4268.6 m (wet gas) and 4326.6 m (wet gas).

The well was permanently abandoned on 19 May 2021 as an oil and gas discovery.

### Testing

No drill stem test was performed.

## Cuttings at the Norwegian Offshore Directorate

Cutting sample, top depth [m]	Cutting samples, bottom depth [m]
1510.00	4485.00

Cuttings available for sampling?	YES
----------------------------------	-----

### Cores at the Norwegian Offshore Directorate

Core sample number	Core sample - top depth	Core sample - bottom depth	Core sample depth - uom
1	4262.4	4273.6	[m ]
2	4274.0	4282.0	[m ]
3	4282.0	4326.7	[m ]

Total core sample length [m]	63.9
Cores available for sampling?	YES
